

Calling Interoperability with Microsoft Teams

Sara Macías Salete - Solutions Engineer
Global Collaboration Solutions Engineering
BRKCOL-2067

Agenda

1. Introduction
2. Using Cisco Phones and Peripherals with Microsoft Teams
3. Direct Routing for Microsoft Teams Phone (overview)
4. Cisco Call for Microsoft Teams
5. Comparison matrixes

What this session is about

- ✓ Overview of Cisco Phones and Peripherals support on MSFT Teams (10%)
- ✓ Overview of Direct Routing (15%)
- ✓ Client-side integration: Cisco Call for MSFT Teams (75%)
 - Features
 - Architecture and Deployment

What this session is NOT about

- ✗ Deep dive on Cisco Peripherals → BRKCOL-2068
- ✗ Deep dive on Direct Routing → BRKCOL-2314
- ✗ Design and Troubleshooting

Agenda

➤ Introduction

- Using Cisco Phones and Peripherals with Microsoft Teams
- Direct Routing for Microsoft Teams Phone
- Cisco Call for Microsoft Teams
- Comparison matrixes

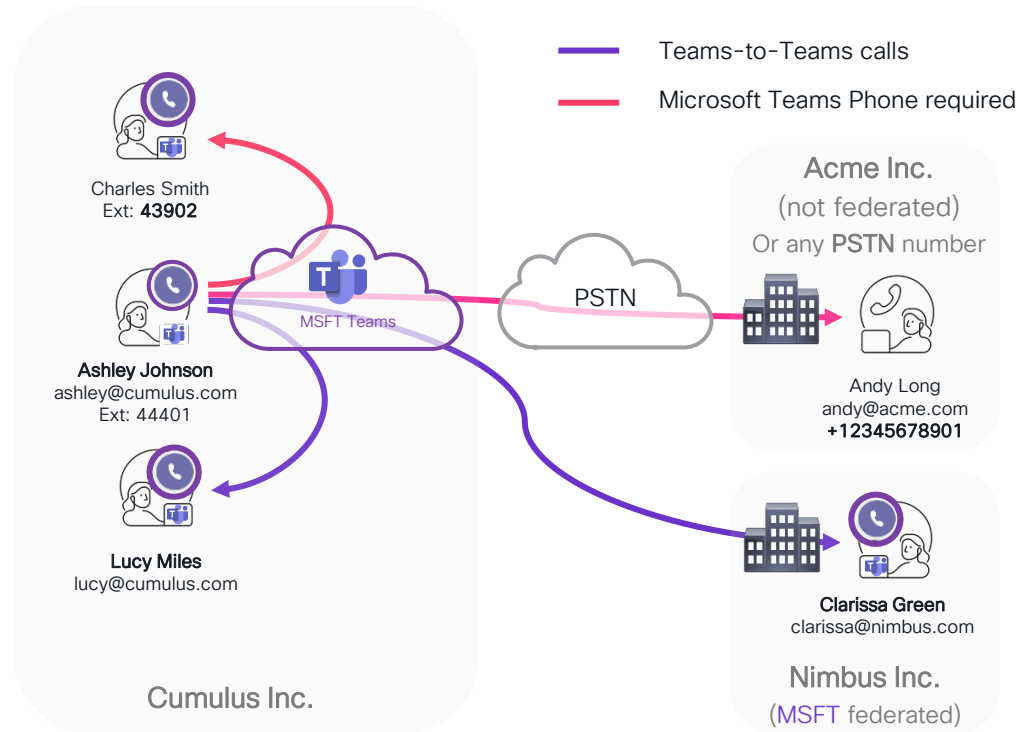

Introduction

Microsoft Teams calling experience with Microsoft Teams Phone

Experience using Microsoft Teams for Teams-to-Teams calls and Microsoft Teams Phone.

We will see different scenarios adding Cisco components such as MPP phones, CUBE, or a Cisco Call Control (replacing Microsoft Teams Phone or co-existing with it)

Types of integrations with Microsoft Teams

Cisco MPP phones and Microsoft SIP Gateway

Cisco Calling and Microsoft Teams Phone System

Cisco Call for Microsoft Teams

Use case	Preserve Cisco phones while using Microsoft Teams Phone system as the call control		A mixed environment of Webex Calling/CUCM and Microsoft Teams Phone system as call controls		Use a Cisco Calling platform when having Microsoft Teams for Messaging / Meetings	
Cisco components		MPP Phones		Cisco Calling and CUBE		Cisco Calling
Microsoft components		Teams Phone		Teams Phone		Microsoft Teams

- Introduction

➤ Using Cisco Phones and Peripherals with Microsoft Teams

- Microsoft Teams certified peripherals
- Cisco Phones and the Microsoft SIP Gateway
- Direct Routing for Microsoft Teams Phone
- Cisco Call for Microsoft Teams
- Comparison matrixes

Using Cisco Phones and Peripherals with Microsoft Teams

Microsoft Teams certified peripherals

Microsoft Teams certified peripherals

Desk Camera 4K

Up to 4K UHD intelligent USB webcam. Supports Windows Hello

Headset 320 series

Affordable dual or mono headset with USC-A, USB-C, or RJ-9 connections and in-line Microsoft Teams button

Headset 720 series

Everyday dual or mono Bluetooth® wireless headset with Voice Activated Microphones and on-ear Microsoft Teams button

Bang & Olufsen Cisco 950

Headphones equipped for business communications, excels in immersive sound, and designed with elegance.

Microsoft Certification Explained

Cisco Headsets & Webcams

All headsets and webcams are **tested** with Microsoft Teams by Cisco

- Microsoft and Webex headset still **work for most** functions on the other platform
- Webex buttons can't invoke Microsoft Teams app and Teams button can't invoke the Webex app

Cisco Headsets & Webcams Certified for Microsoft Teams

Selected model headsets and webcams are **certified** for Teams

- **Tested and certified** for Microsoft Teams by Microsoft
- The device meets **additional design requirements**

Non-certified peripherals are part of a broader portfolio and can generally be used in most cases, since they are compatible with Microsoft Teams

Cisco Phones and the Microsoft SIP Gateway

Microsoft SIP Gateway

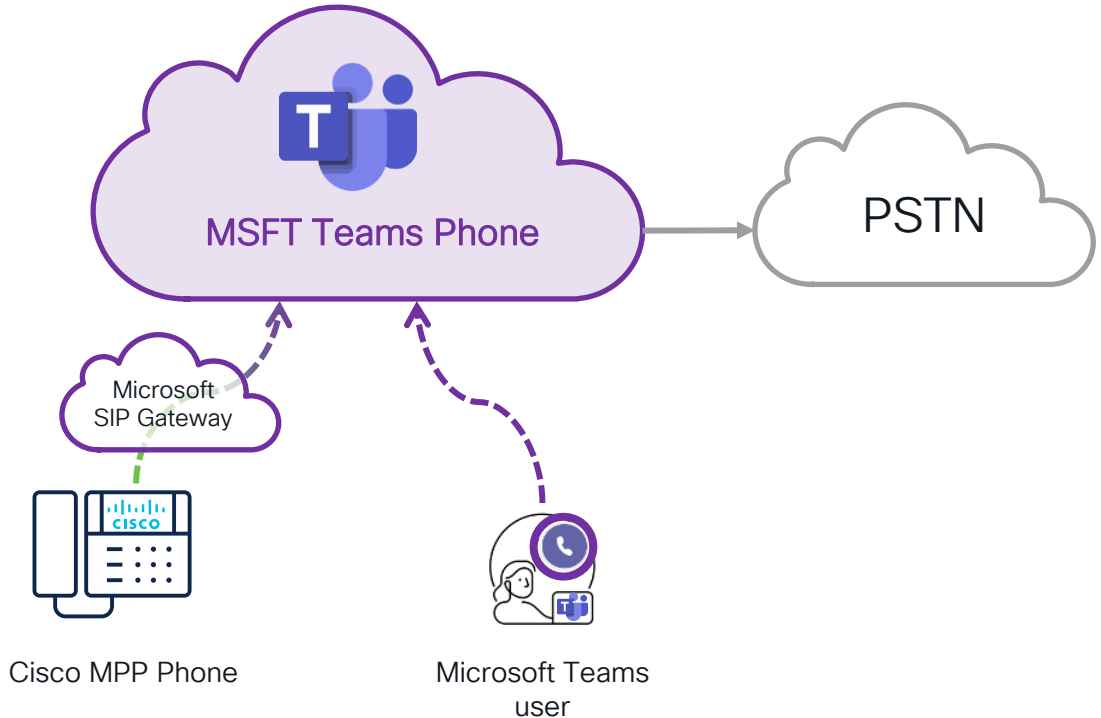

Concept

Microsoft SIP Gateway allows registration of SIP Phones in Microsoft Teams Phone.

Cisco MPP phones are listed as compatible with Microsoft SIP Gateway, although this solution is not certified by Cisco.

Limitations include:

- No Presence on Call Queues
- No softkey templates
- No survivability (SBA)
- No shared-lines
- Incomplete device info on Teams Admin Center
- ...

Agenda

- Introduction
- Using Cisco Phones and Peripherals with Microsoft Teams
 - **Direct Routing for Microsoft Teams Phone (overview)**
- Cisco Call for Microsoft Teams
- Comparison matrixes

Direct Routing for Microsoft Teams Phone

Microsoft Direct Routing with CUBE

Concept

With Microsoft Direct Routing, you can configure on-premises PSTN connectivity with Microsoft Teams client.

CUBE is a certified SBC for Microsoft Direct Routing

CUBE for Direct Routing to the PSTN

CUBE certification supports:

Calls between Teams Phone System and PSTN SIP trunks

Media Bypass

High Availability

E911 Calling with Intrado and Bandwidth

Interworking with Cisco Telephony Adapters

CUBE version tested:

14.4 (IOS-XE 17.6.1a or later)

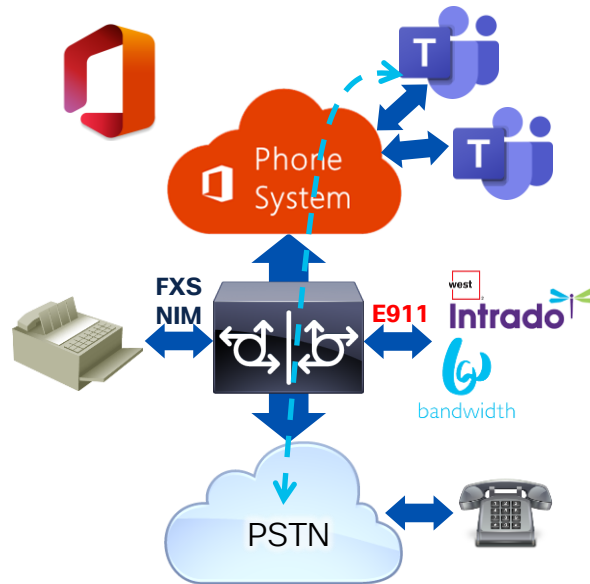

Requires CUBE trunk licenses

Documentation:

Use the Direct Routing PSTN [application note](#)

Additional, application-specific [configuration notes](#) to simplify your deployment

CISCO Live!

<https://www.cisco.com/c/dam/en/us/solutions/collateral/enterprise/interoperability-portal/direct-routing-with-cube.pdf>

Microsoft Direct Routing with CUCM via CUBE

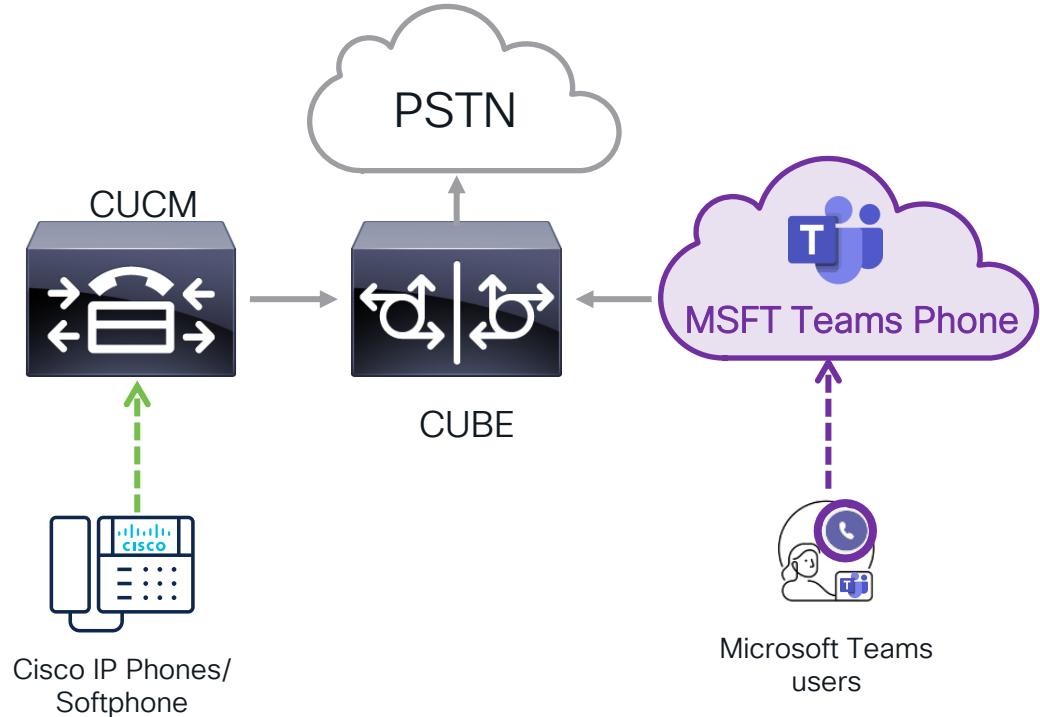

Tested Network Topology

CUBE can also be connected to an internal phone system such as Cisco Unified Communications Manager.

Supported topologies:

- Co-resident CUBE for Direct Routing
- Dedicated CUBE instance for Direct Routing and an additional gateway for connection to the PSTN

This is not the Cisco preferred solution for Calling Interoperability due to complexity and cost, but it is documented and supported

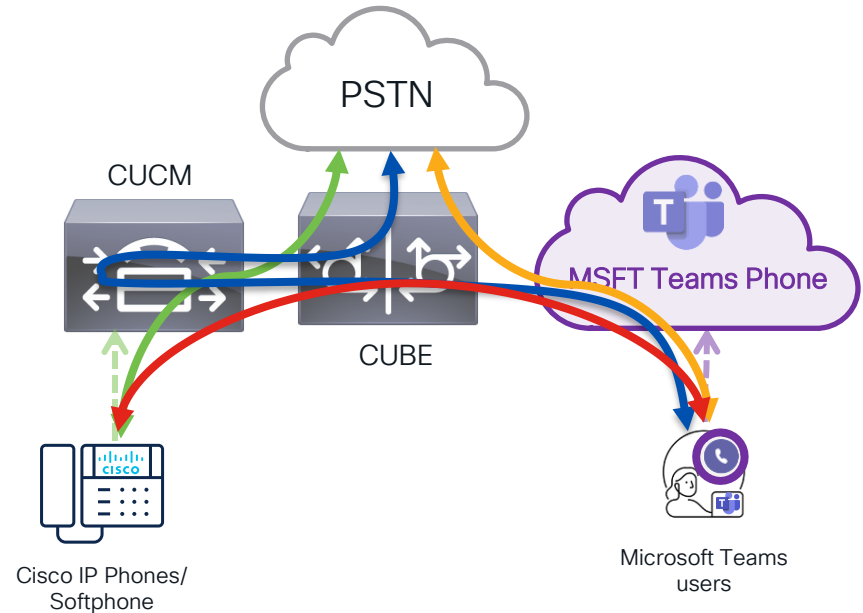

<https://www.cisco.com/c/dam/en/us/solutions/collateral/enterprise/interoperability-portal/direct-routing-for-communications-manager-via-cube.pdf>

Direct Routing through CUCM via CUBE and Interworking with CUCM

Supported Call Paths

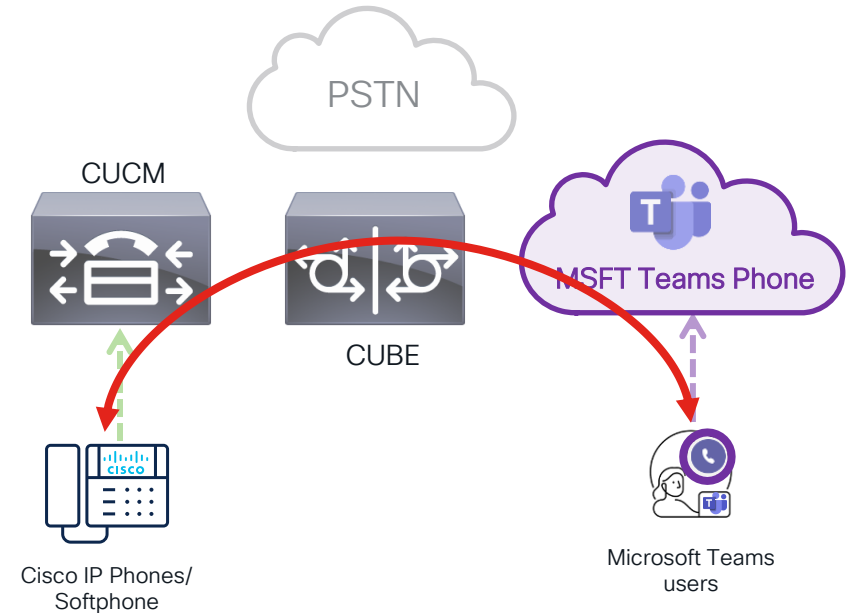

- Calls between Cisco Phones/Softphone and the PSTN
- Calls between MSFT Teams users and the PSTN via CUBE (Direct Routing)
- Calls between MSFT Teams users and the PSTN via CUCM and CUBE (Direct Routing)
- Calls between Cisco Phones and MSFT Teams users (limitations apply)

Interworking Cisco UCM with Microsoft Teams Phone via CUBE

Limitations highlights

- Direct routing for Microsoft Teams Phone **does not support video codecs**, therefore only audio calls can be established between Cisco UCM and Microsoft Teams Phone clients using this solution.
- **Lines cannot be shared** between Cisco UCM and Microsoft Teams Phone clients.
- Call completion (**callback**, automatic callback) is **not possible** when calling a Microsoft Teams Phone number from Cisco UCM.
- ...

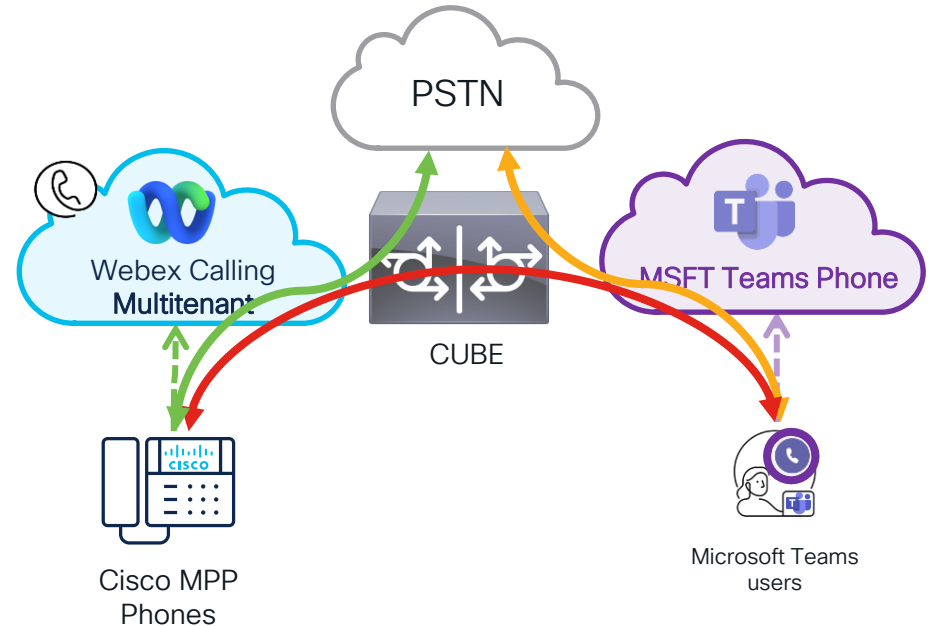

<https://www.cisco.com/c/dam/en/us/solutions/collateral/enterprise/interoperability-portal/direct-routing-for-communications-manager-via-cube.pdf>

Interworking Webex Calling with Microsoft Teams via CUBE

Customers can use CUBE to allow communication between Microsoft Teams Phone users and Webex Calling users.

- Use the [documentation created for CUCM](#) to deploy this solution
- PSTN Access through Webex Calling is **not allowed** (Microsoft Teams Phone should have its own PSTN access)

Agenda

- Introduction
- Using Cisco Phones and Peripherals with Microsoft Teams
- Direct Routing for Microsoft Teams Phone

- Comparison matrixes and FAQ

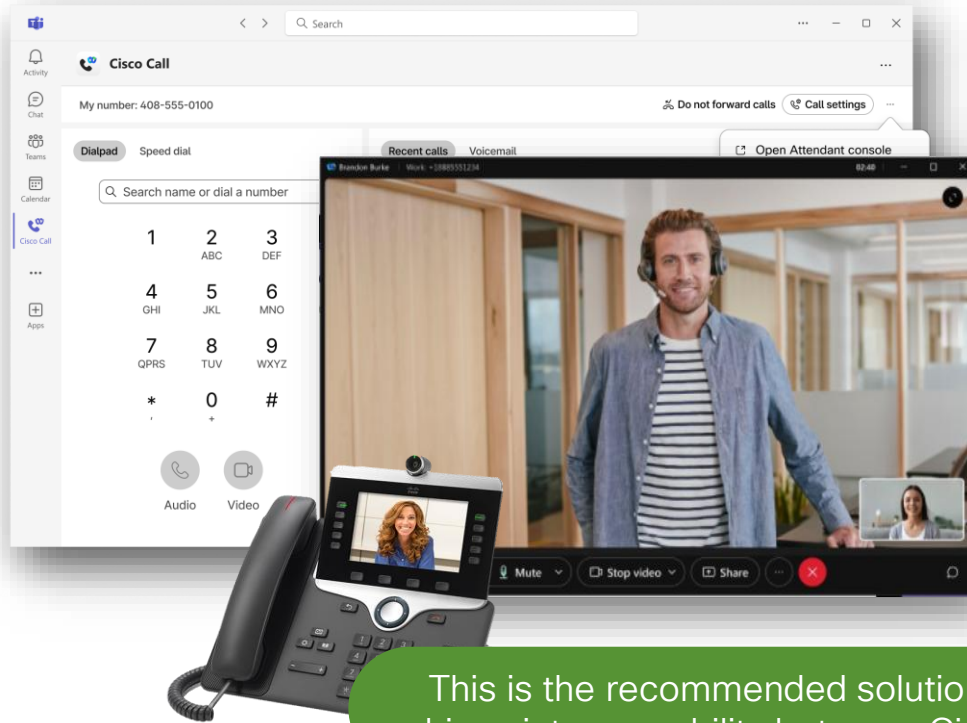

Cisco Call for Microsoft Teams

Solution Overview

Cisco Call for Microsoft Teams

The simplest way to integrate Microsoft Teams Messaging and Cisco Calling

- Use existing Cisco calling infrastructure: Webex Calling (including Multitenant and Dedicated Instance), Webex for Broadworks or CUCM
- Click to call with your existing Cisco phones from MS Teams
- No compromise on calling features
- No dial plan or routing re-configuration required
- No additional license costs

This is the recommended solution in which Cisco is investing the most to achieve interoperability between Cisco Calling platforms and Microsoft Teams

Webex App or Jabber?

Cisco Call for
Microsoft Teams

Webex App running in the background

Full set of features

Calling Infrastructures:

- Webex Calling Multitenant
- CUCM
- Webex Calling Dedicated Instance
- Webex for BroadWorks

Cisco Jabber for
Microsoft Teams

Cisco Jabber running in the background

Limited set of features

- No Presence Sync; No Call History; No Voicemail

Calling Infrastructures:

- CUCM
- Webex Calling Dedicated Instance

Call to action: migrate from Jabber to the Webex App to experience the Calling Integration at its best

Cisco Call for Microsoft Teams

The screenshot shows the Cisco Call app interface within a Microsoft Teams window. The interface includes a left sidebar with navigation options like Activity, Teams, Calendar, and Cisco Call. The main area displays a 'My number' section with a dialpad and speed dial, and a 'Recent calls' list. A call log entry for Matthew Baker is highlighted, showing his name, hunt group, and call status. A 'Voicemail' button is visible in the top right, and an 'Open Attendant console' button is shown in a tooltip. A 'Call Forwarding status' button is also present.

Call Tab

My Number

Dialpad

Add Speed dial

CX Essentials access

NEW!

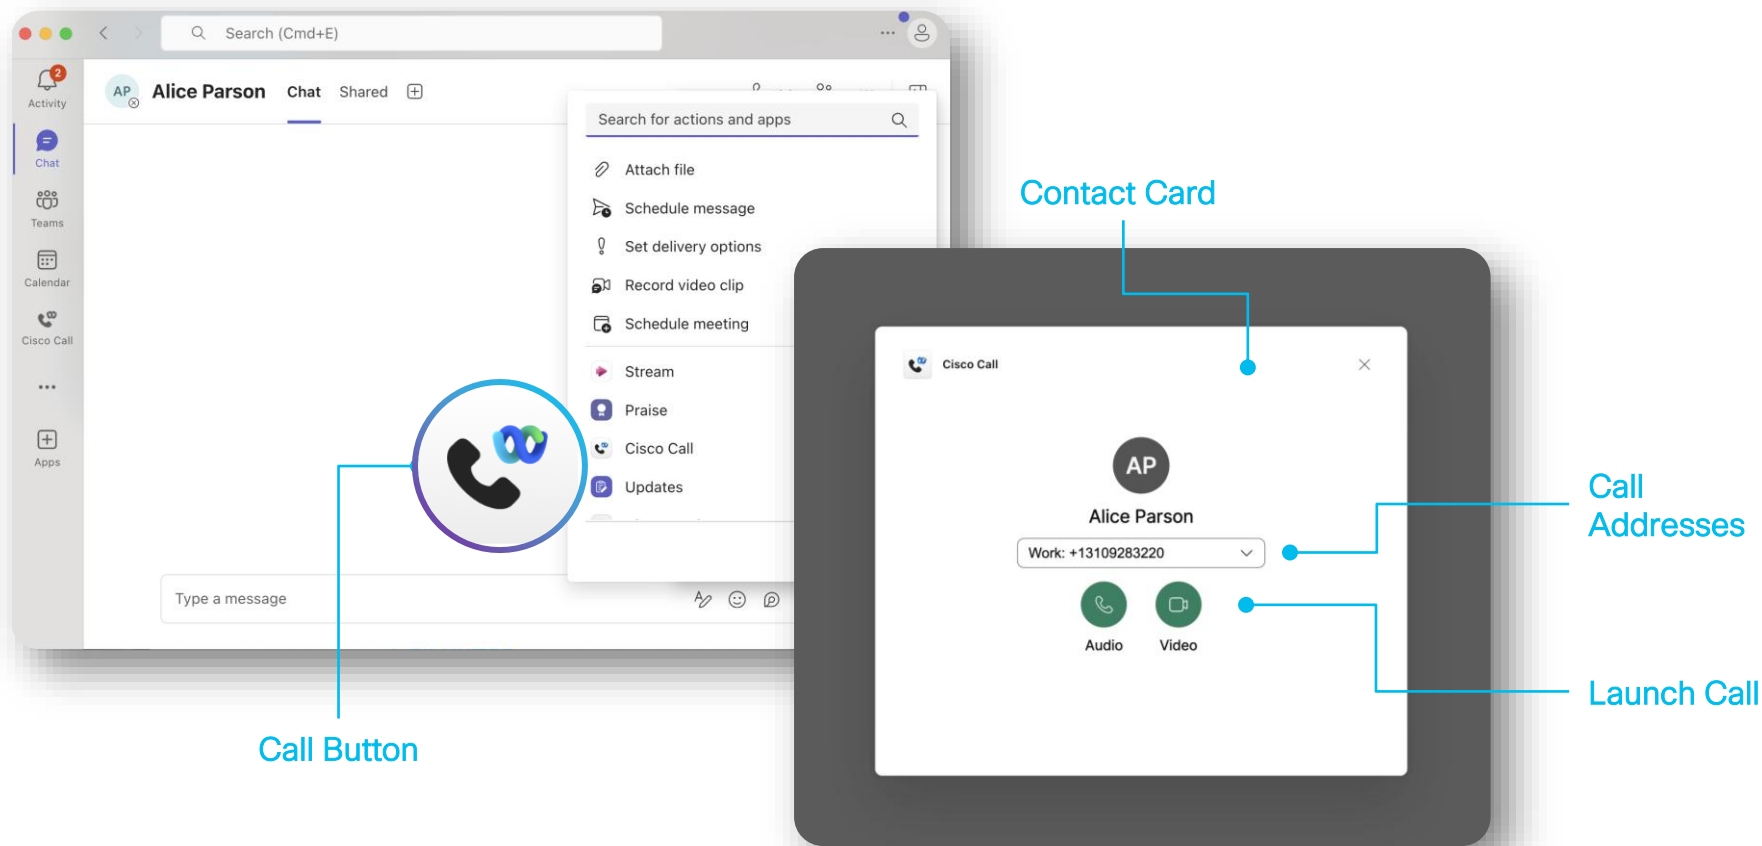

Simplified Call Settings

NEW!

Single App experience

Cisco Call from a MS Teams conversation

In-Call Window

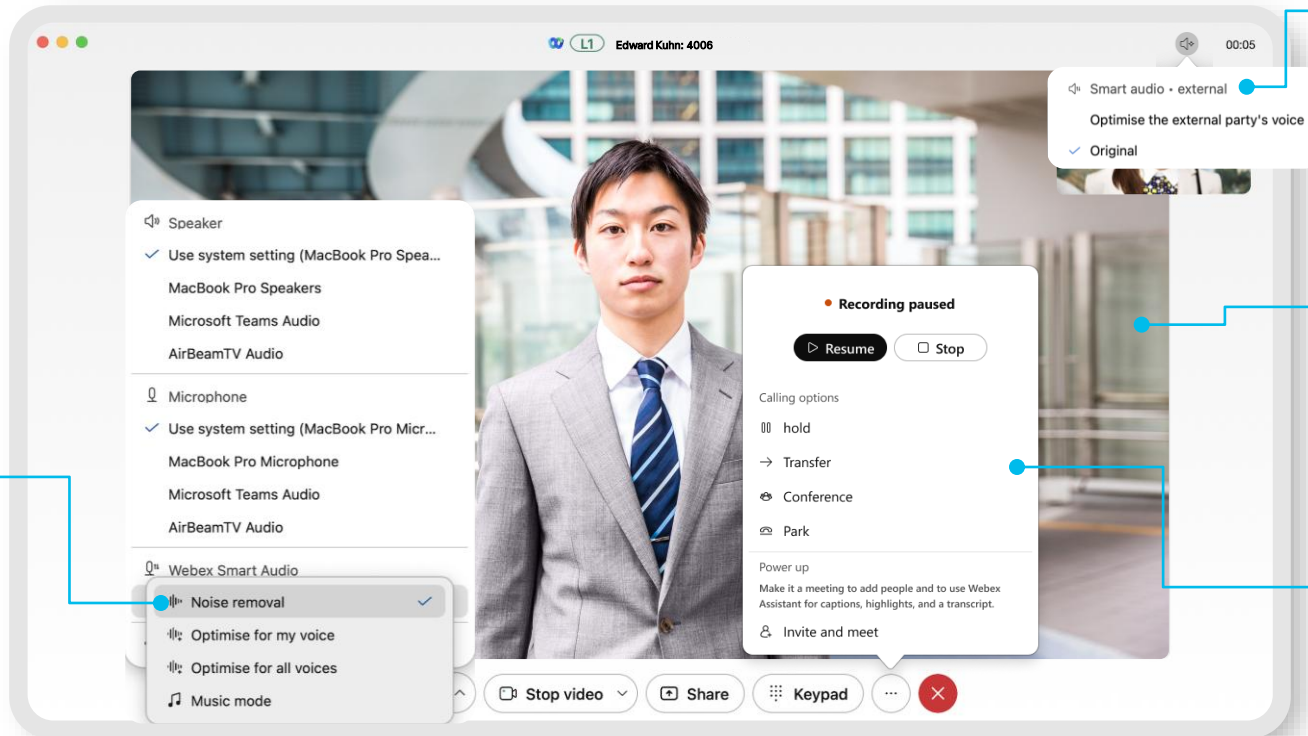

In-Call window provides complete Webex Calling capability set

Noise Removal

Smart Audio

Audio and Video Calling

Mid-Call Controls

Webex Calling dock

The Webex Calling dock (formerly multi call window) is a user enabled setting to **maximize calls for multiple lines and manage calls effectively.**

It is part of the Webex App and it works with **all the Calling platforms.** It can act as a companion app for Microsoft Teams.

Only available on Windows machines today.

cisco *Live!*

Queue management

Sign in/out from queues/Hunt Groups

Search to call

Search on Webex

Multiple lines

See all the lines available for the user with their associated calls and notifications

Watchlist

See the call presence status of monitored users (**Webex Calling and Webex hosted by Service Provider only**)

Device Control

Optimized for multi-tasking with small footprint

Dialpad

Call Settings

Direct access to Call Settings

Link to Recent Calls and Voicemails

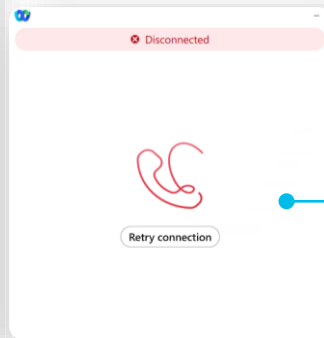

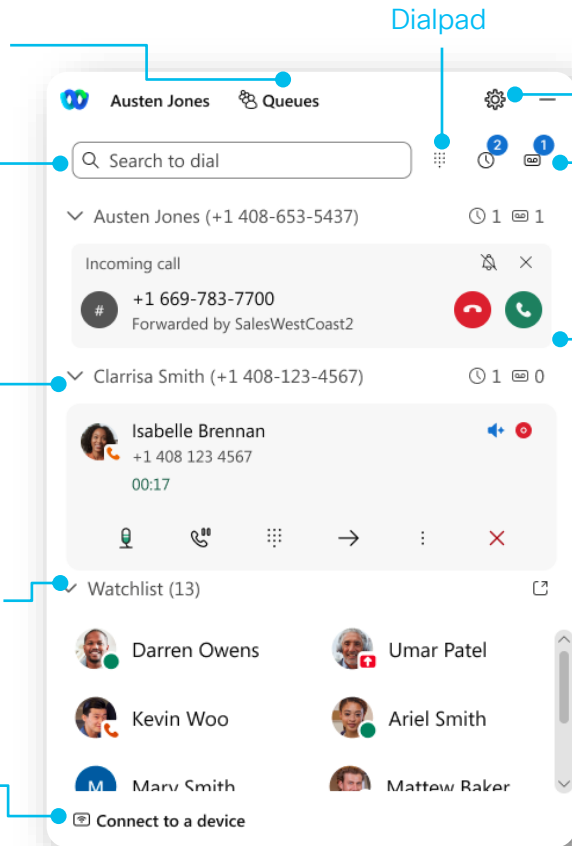

See notifications and open Recent Calls and Voicemails in MSFT Teams

Multiple call handling

Take, decline or resume calls while in another call

Phone disconnection prompt

See when your phone services get disconnected and retry connection

Webex Calling dock - UCM

The Webex Calling Dock is available on CUCM and Webex Calling Dedicated Instance with the following features

Hunt Groups

Sign in/out from Hunt Groups

Search to call

Search on Webex

Multiple lines

See all the lines available for the user with their associated calls and notifications

Dialpad

Call Settings

Direct access to Call Settings

Link to Recent Calls and Voicemails

See notifications and open Recent Calls and Voicemails in MSFT Teams

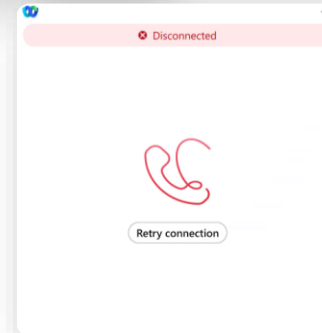

Multiple call handling

Take, decline or resume calls while in another call

Device Control

Optimized for multi-tasking with small footprint

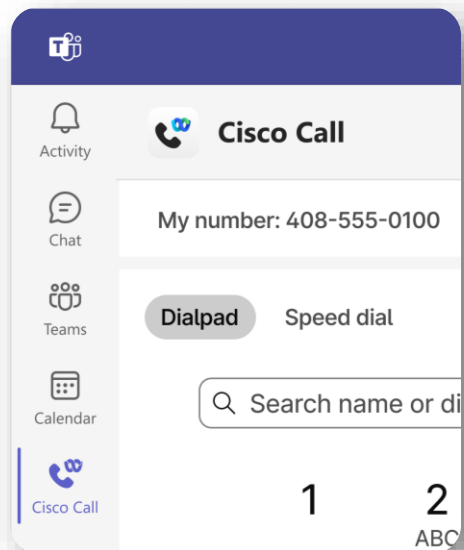

Phone disconnection prompt

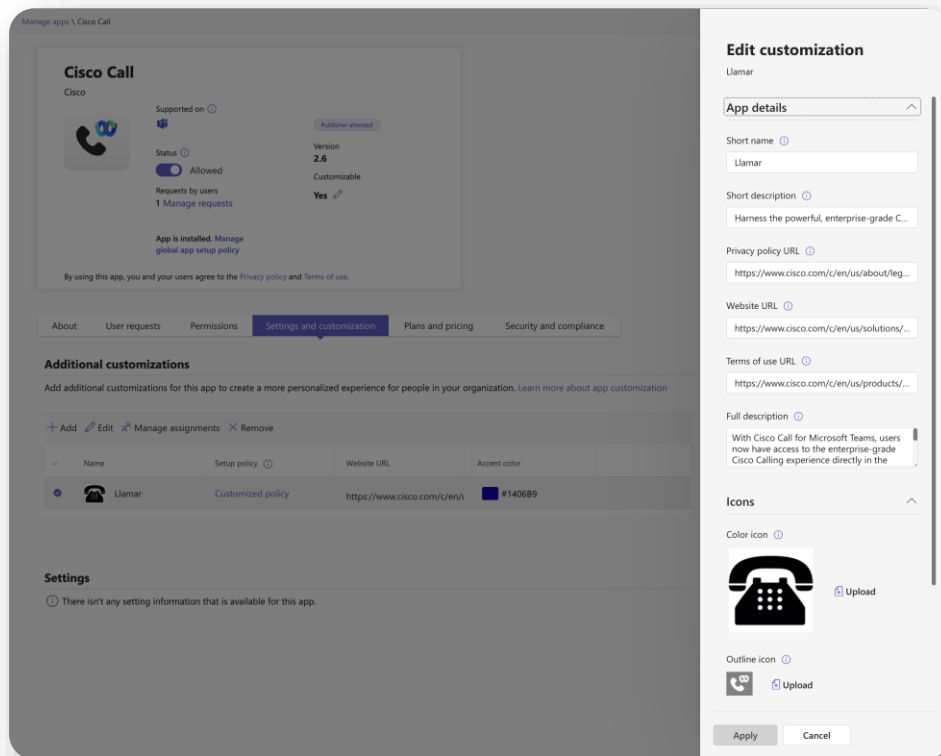

See when your phone services get disconnected and retry connection

App rename

Webex Calling for Microsoft Teams is now **Cisco Call for Microsoft Teams**

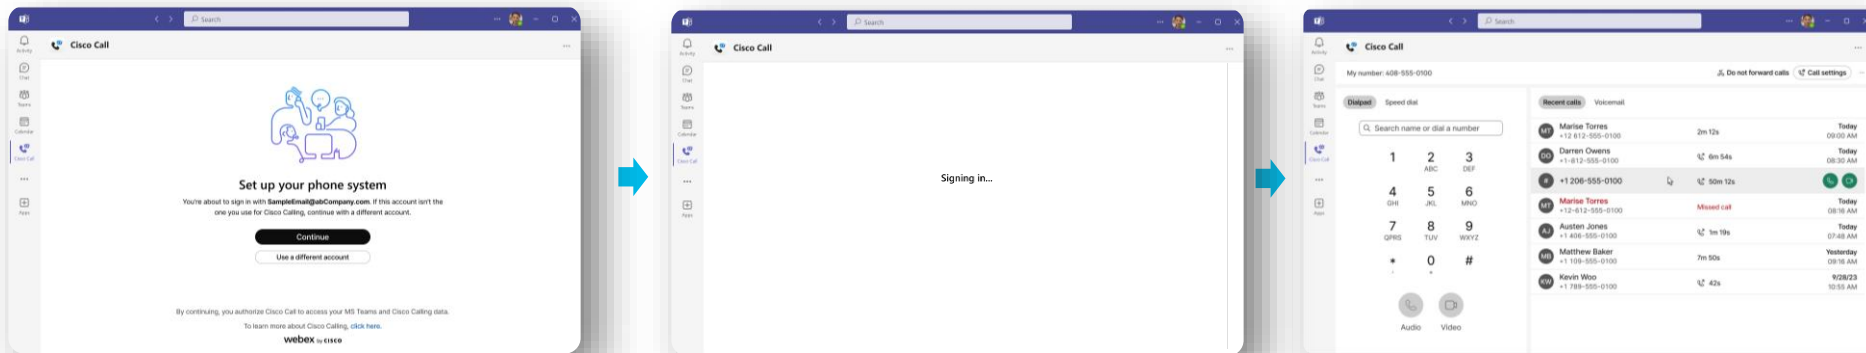

App customization for name and logo is also possible

Simplified login experience

A single login to the integration is leveraged if Microsoft Teams and Webex are SSO enabled or if the login session is valid.

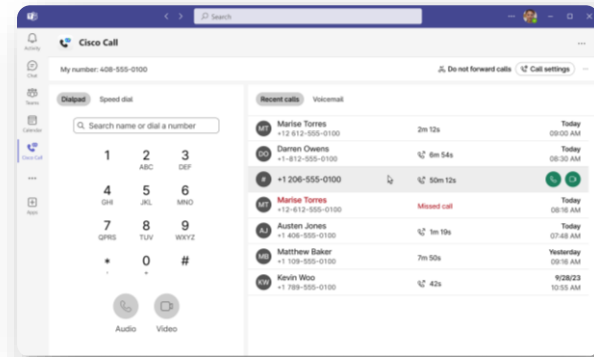

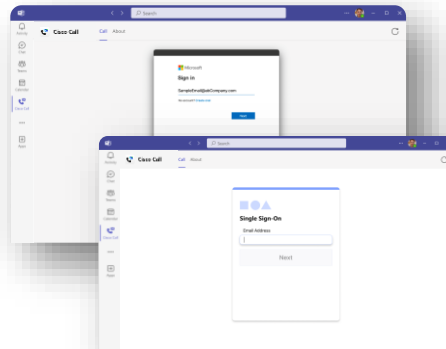

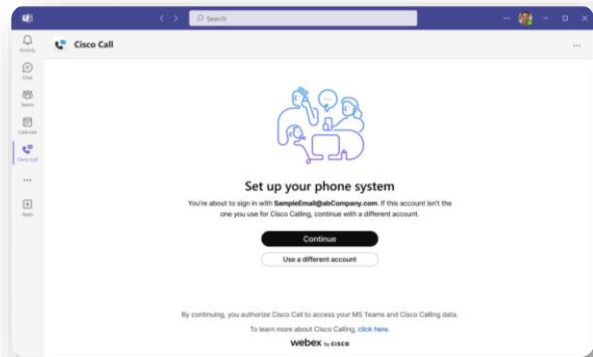

Note: Webex App will pop up for user to login

Watch a demo

Note: token expires every 90 days

Sign in experience with no valid login session

Assuming no valid login session and no valid Microsoft & Webex login token

Step 1: Sign in using the same account used to login on Microsoft Teams

Step 2: Login to the integration

Webex Calling App is ready to use

Note: Webex App will pop up for user to login

cisco Live!

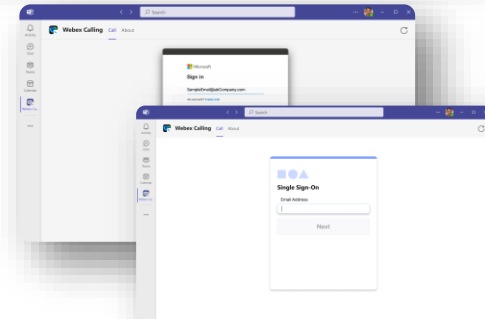

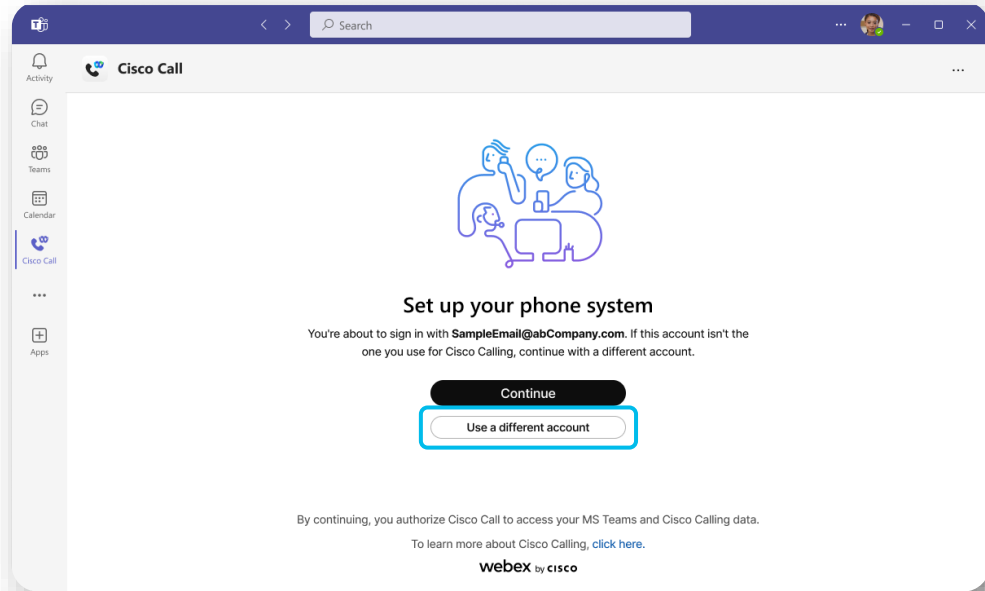

Note: token expires every 90 days

Using a different login account

Login details are retrieved from Microsoft Teams login.

If user prefers to use a different email address to log in, they can hit “**Use a different account**”

The user will be prompted with a login prompt window.

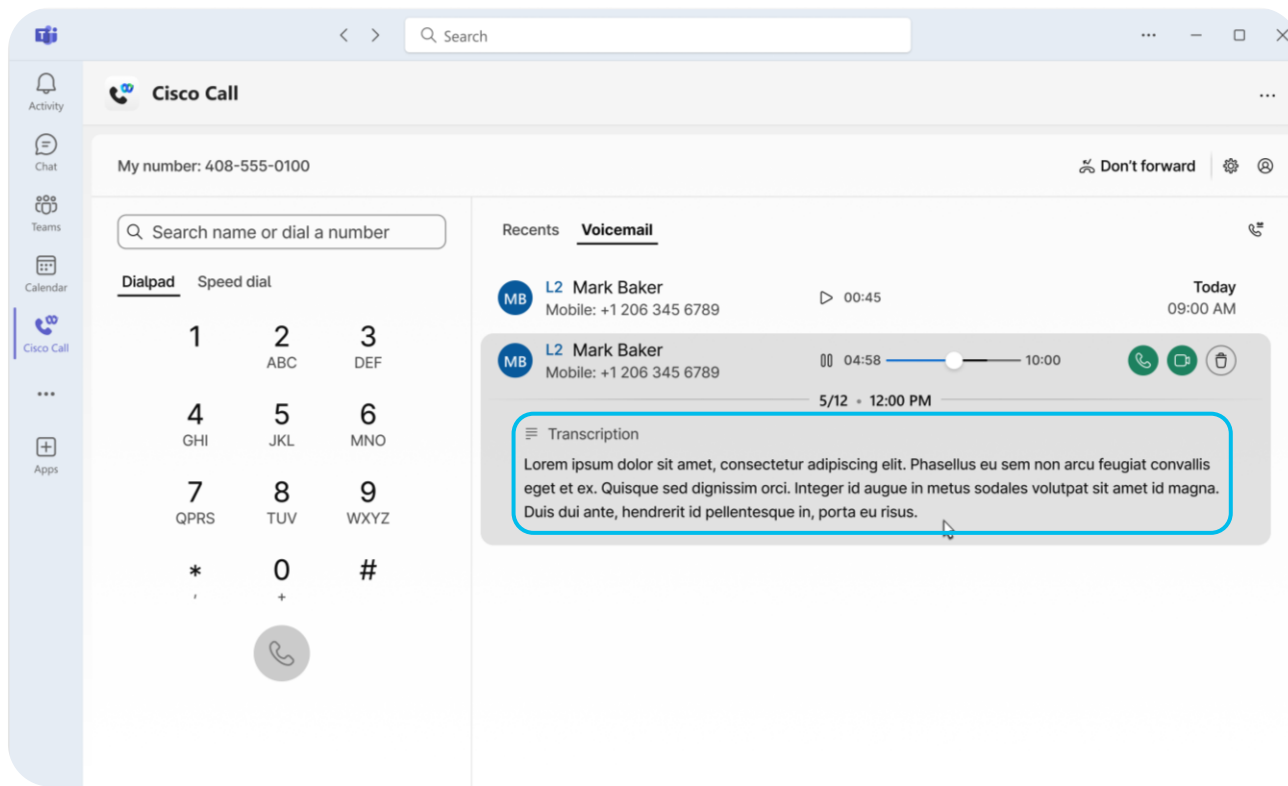

Voicemail enhancements

New!

See **voicemail transcriptions** on the Voicemail tab.

Call your voicemail

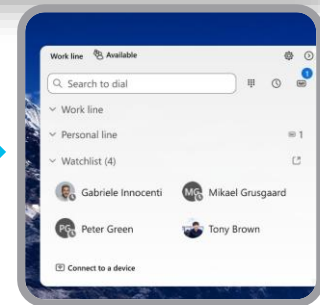

Single App experience

Removing the Webex logo from the **In-call window**, **Calling Dock** and **taskbar**

Webex icon in the System Tray opens the **Calling Dock** (not the entire Webex App)

cisco Live!

Watch a demo

Bidirectional Presence Sync

The following presence status will be synchronized between Webex and Microsoft Teams:

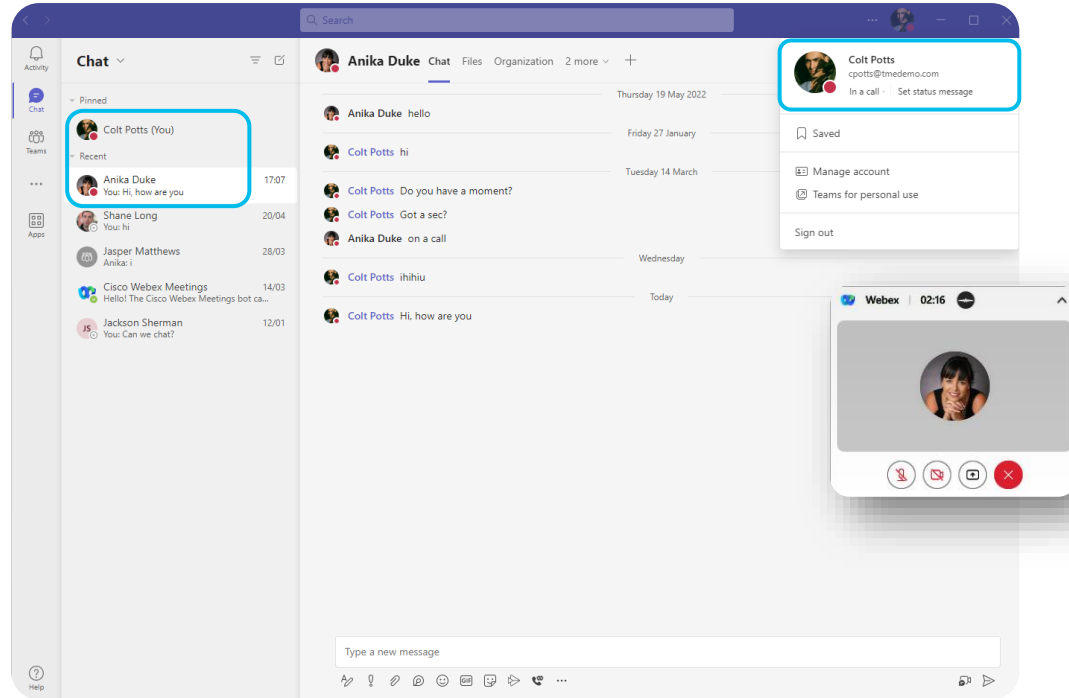

- | | | |
|--|---|--|
|  On a call | → |  In a call |
|  DND | → |  DND |
|  Presenting | → |  Presenting |
|  In a meeting | → |  In a call |

- | | | |
|--|---|--|
|  In a call | → |  On a call |
|  DND | → |  DND |
|  Presenting | → |  Presenting |

When in a MSFT Teams meeting, MSFT sets the status as In a call

cisco *Live!*

Mute Webex Call when on a Teams meeting/call

When on a Teams Meeting or call, call Notifications will **follow the Call Settings from the Webex App**.

Example:

- Alice is in a Microsoft Teams Meeting
- Austen calls Alice using the integration (Webex Calling/CUCM)
- If Alice set the Call Notifications to mute notifications when on a meeting or call, **Alice won't see/hear the call**
- Alice will see a **missed call** from Austen later

cisco Live!

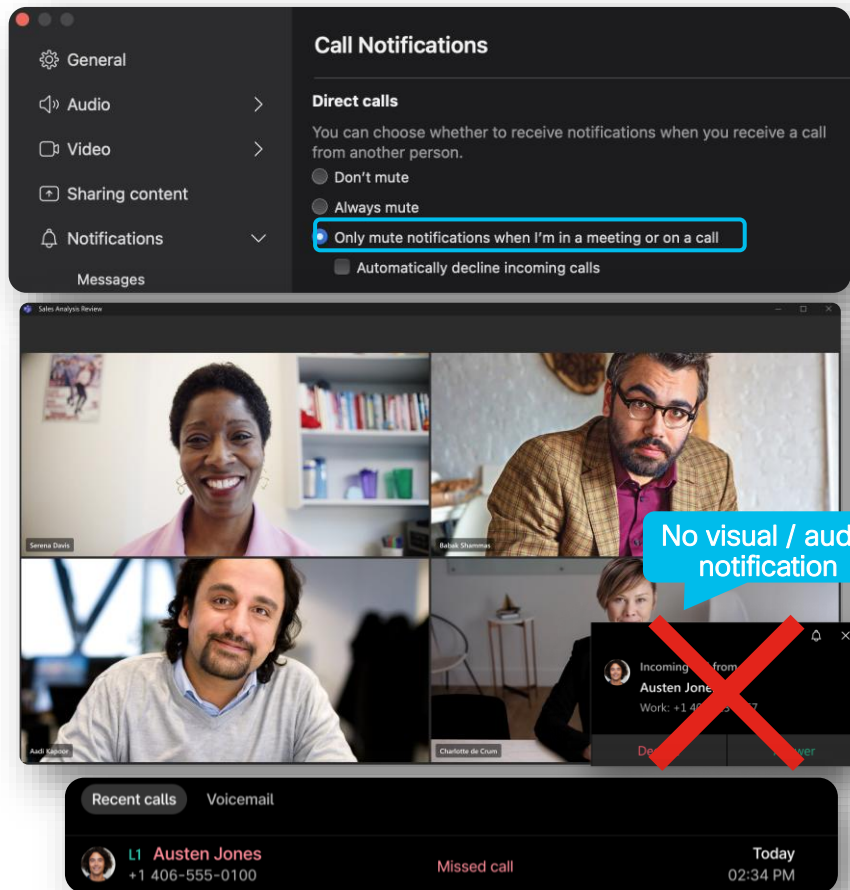

Call Settings on Webex App

Microsoft Teams Meeting

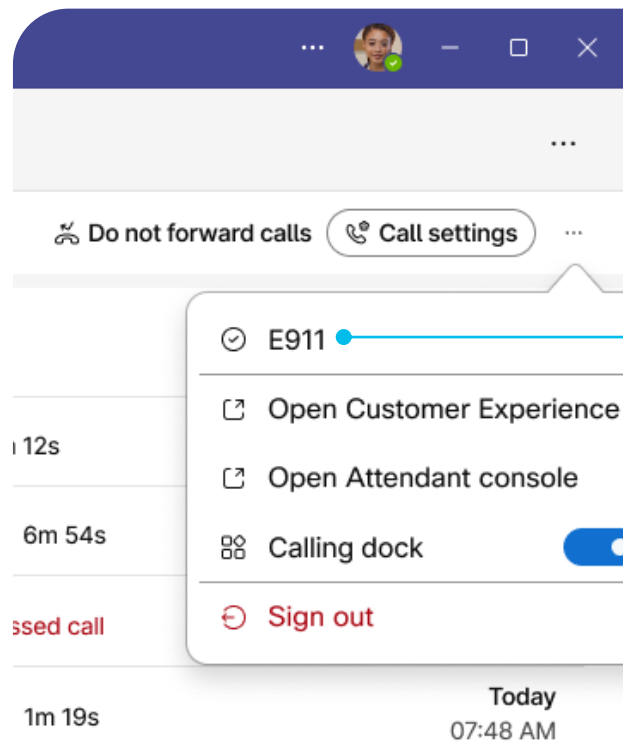

Recent Calls tab from the integration

Watch a demo

New!

New features accessible from the *More* menu

E911 visibility

For US/Canada users only

Calling dock toggle

Enable or disable the Calling Dock

March 2025

Phone services banner

It shows if phone services are disconnected.

If Webex App is logged out, the **Sign in** button opens it to login

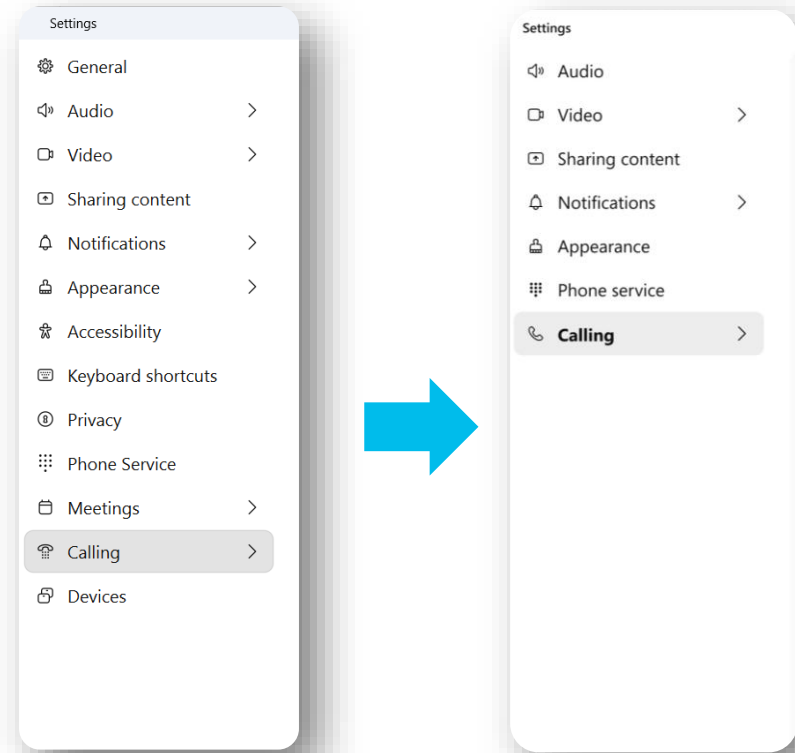

Watch a demo

March 2025

Simplified Call Settings

Keeping only the **most relevant options** on Webex Call Settings when using the integration

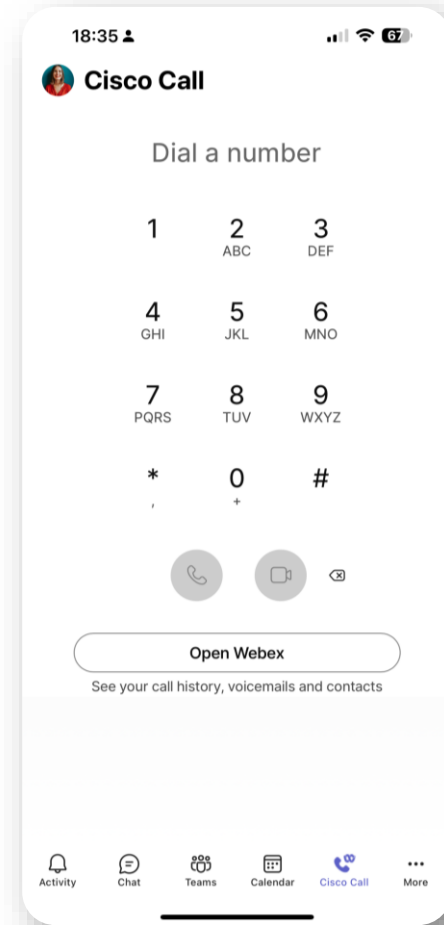

March 2025

Mobile experience

Cisco Call app is available from the Microsoft Teams apps on **mobile**.

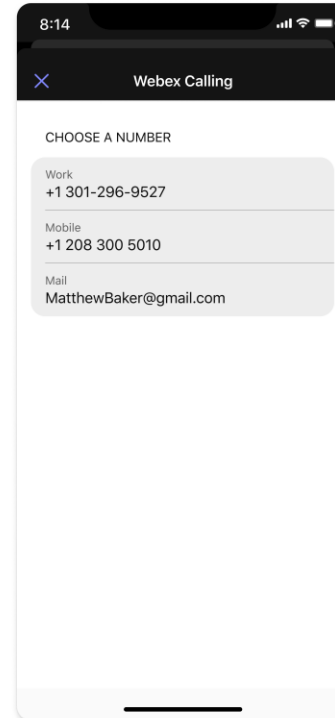

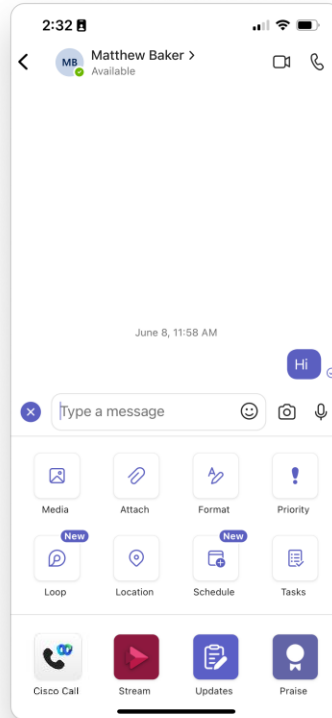

To access Call History, Voicemails and Contacts, Webex App must be open.

Presence sync is supported on mobile.

Mobile experience from chat

Call a user from
1:1 chats using
the integration.

Solution Architecture

Cisco Calling Infrastructures

Webex Calling Multitenant
(preferred)

Cisco Unified
Communication Manager
(CUCM)

+

Webex Cloud Connected
UC (CCUC)

Webex Calling Dedicated
Instance

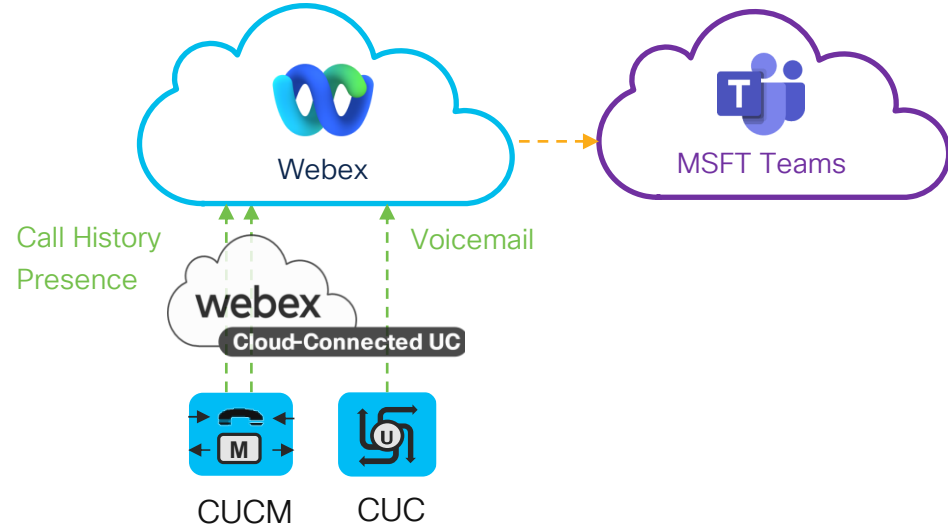

Note: Webex for BroadWorks is also supported, but not covered in this presentation

Why do we need CCUC with CUCM?

Cisco Call for Microsoft Teams is a Cloud solution, and some services are taken from the Cloud.

We need a **connector: Webex Cloud Connected UC**

If CCUC is not enabled, a user can still make calls through the integration, but **Call History**, **Voicemail** and **Presence** won't be synced.

CCUC is required to push Call History, Presence and Voicemail from CUCM and CUC to the Webex Cloud

What's Webex Calling Dedicated Instance?

Webex Calling Dedicated Instance (DI)

A dedicated cloud instance option based on [Cisco Unified Communications Manager](#) architecture.

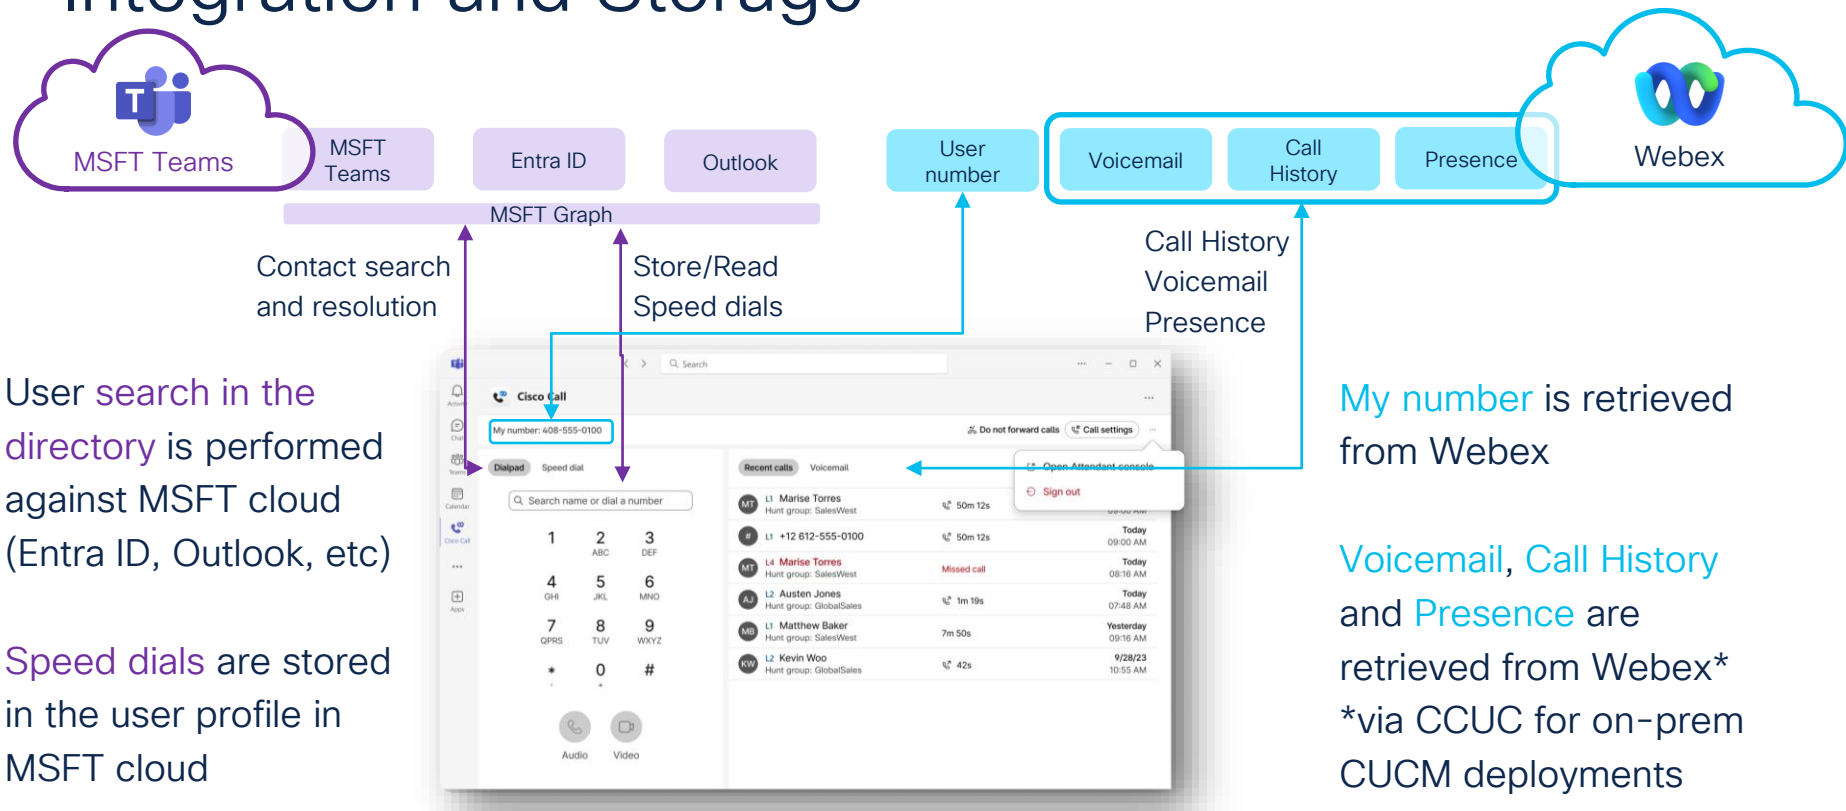

Integrated into [Webex Calling](#)

Takes advantage of Webex platform services

As this solution sits in the Webex Cloud, Call History, Presence and Voicemail are already available and there is **no need to configure a connector**.

Integration and Storage

User search in the directory is performed against MSFT cloud (Entra ID, Outlook, etc)

Speed dials are stored in the user profile in MSFT cloud

My number is retrieved from Webex

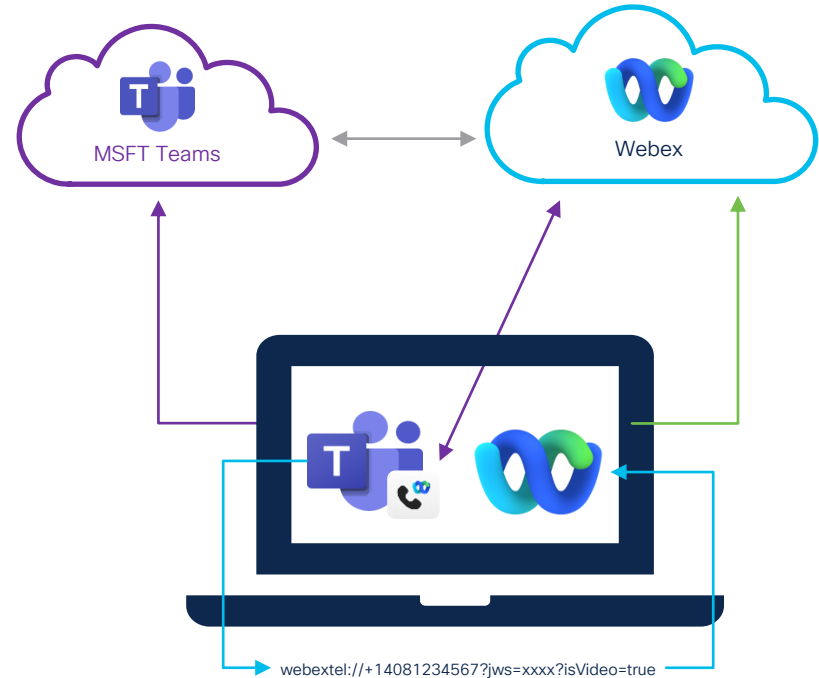

Voicemail, Call History and Presence are retrieved from Webex*
*via CCUC for on-prem CUCM deployments

This means that Contact Resolution for Dialpad/speed dial comes from Microsoft, while for Call History/Voicemail it comes from Webex/UCM

Cisco Call for Microsoft Teams Architecture

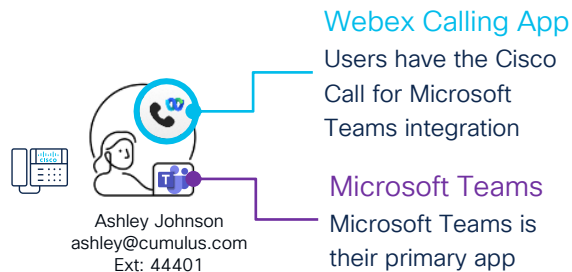

For Webex Calling (Multitenant and DI)

1. User launches **MSFT Teams**
2. Webex App registers to **Webex Calling**
3. User signs in and authorizes **Webex Calling integration**. Integration downloads and displays Speed Dials, Call History, Voicemail, etc
4. Users makes a call via the integration. **webextel://** protocol handler launches Webex App call window to make the call.

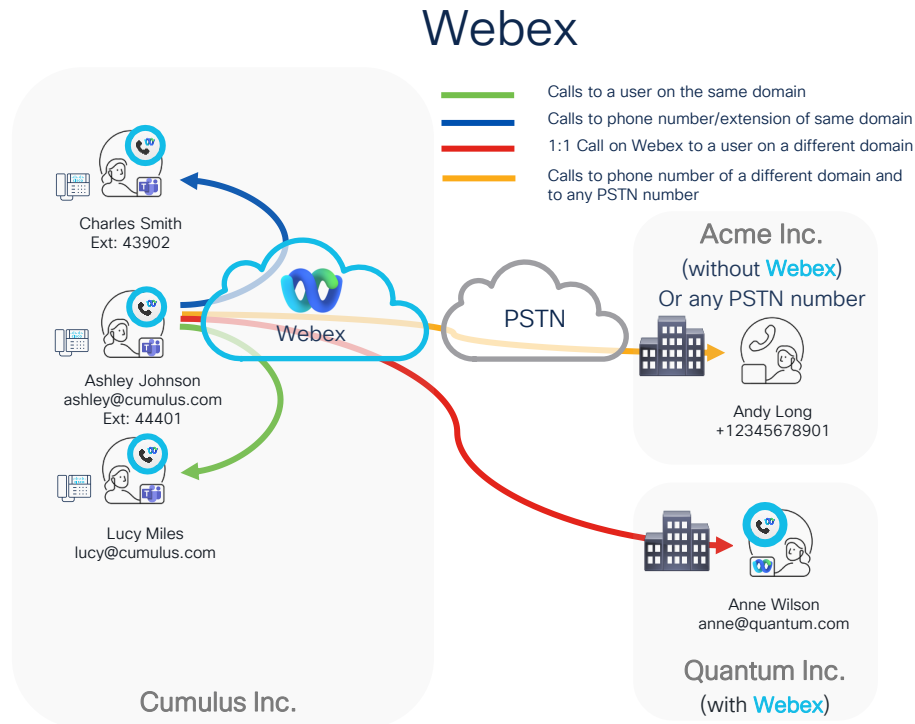

Supported call flows through the integration

Webex scenario

Cumulus Inc. users have Microsoft Teams with the Webex Calling integration installed.

Their Calling platform is **Webex Calling**, and 1:1 Call on Webex is also enabled.

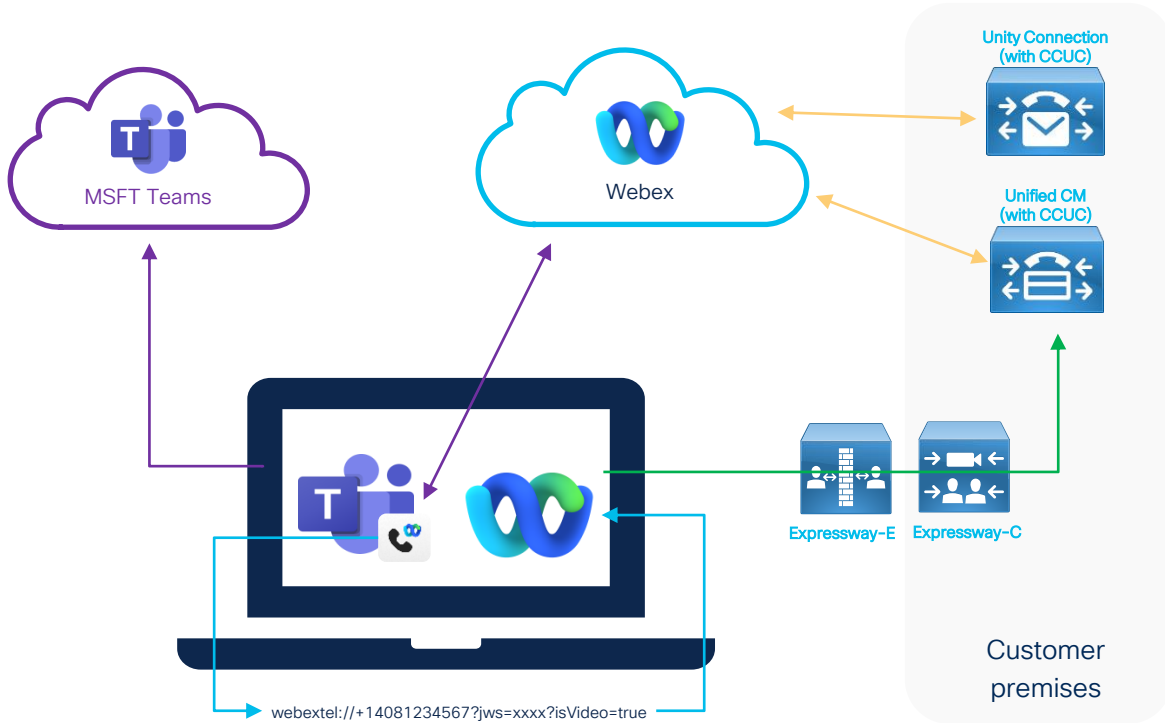

Users can be paired with a phone while using the integration (only supported for number calling)

Cisco Call for Microsoft Teams Architecture

For CUCM

1. User launches **MSFT Teams**
2. Webex App registers to **Unified CM**
3. User signs in and authorizes **Webex Calling Integration**. Integration downloads and displays Speed Dials, etc
4. If Unified CM is **CCUC enabled**, Call History and My number will be retrieved and displayed on Integration tab, and Presence will be synced
5. If Unity Connection is **CCUC enabled**, Voicemail will be retrieved and displayed on the Integration tab
6. Users makes a call via the integration. **webextel://** protocol handler launches Webex App call window to make the video call.

Supported call flows through the integration

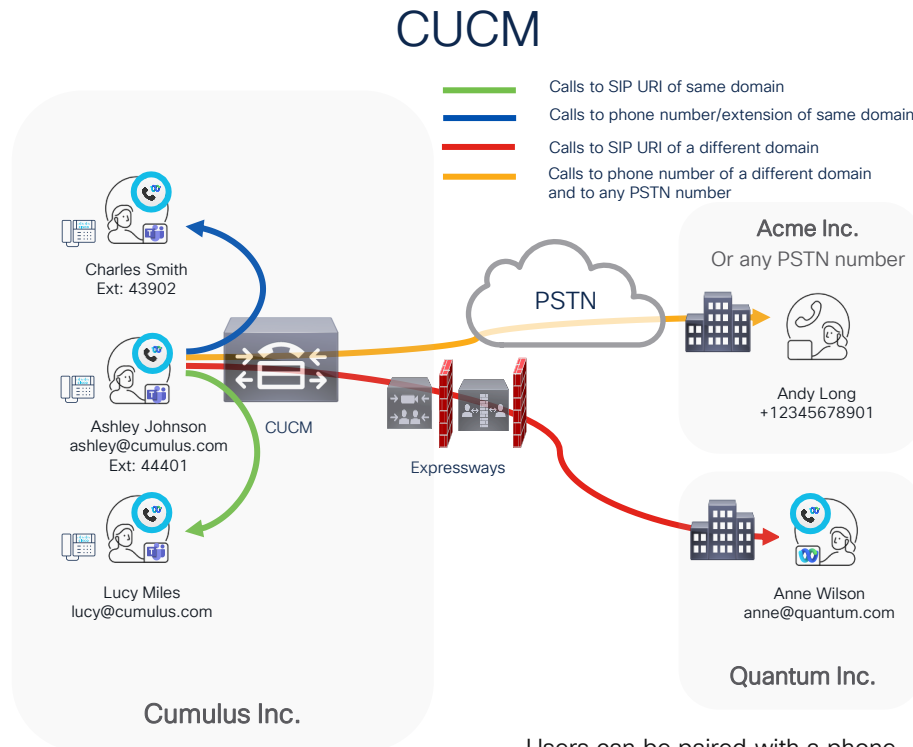

CUCM scenario

For your
reference

Cumulus Inc. users have Microsoft Teams with the Webex Calling integration installed.

Their Calling platform is **CUCM**, and CUCM is used for SIP Calling

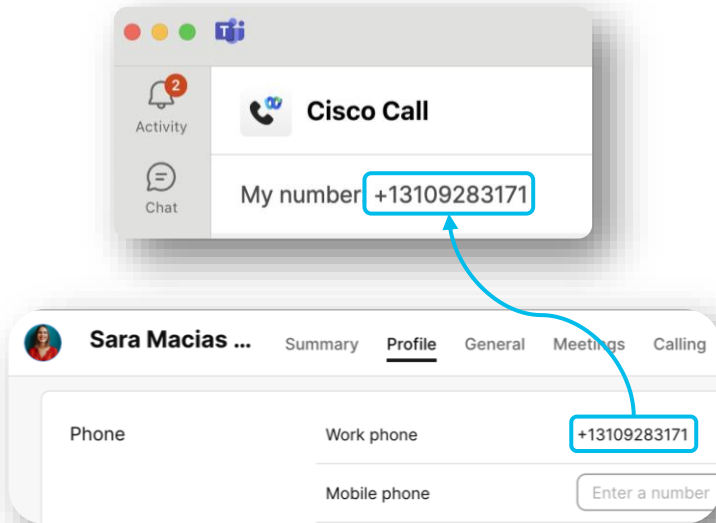

Users can be paired with a phone while using the integration

Note: This scenario uses CUCM for SIP calls behavior

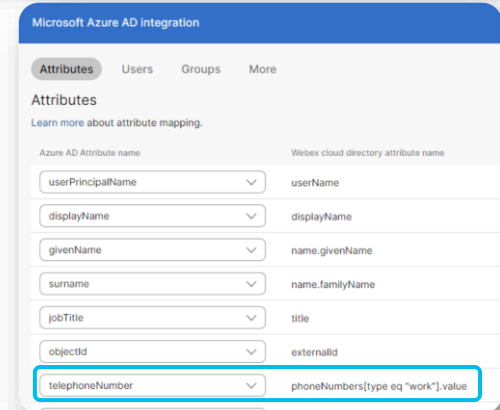

Where does the field **My number** comes from?

The field **My number** comes from the field **Work phone** of the user found in their profile

The field **Work Number** under the user profile commonly comes from:

- The **Primary phone number** assigned to the user under **Calling**
- Entra ID, mapping the attribute **telephoneNumber** with **Phone Number** (this option overwrites the previous one, so make sure the numbers match)

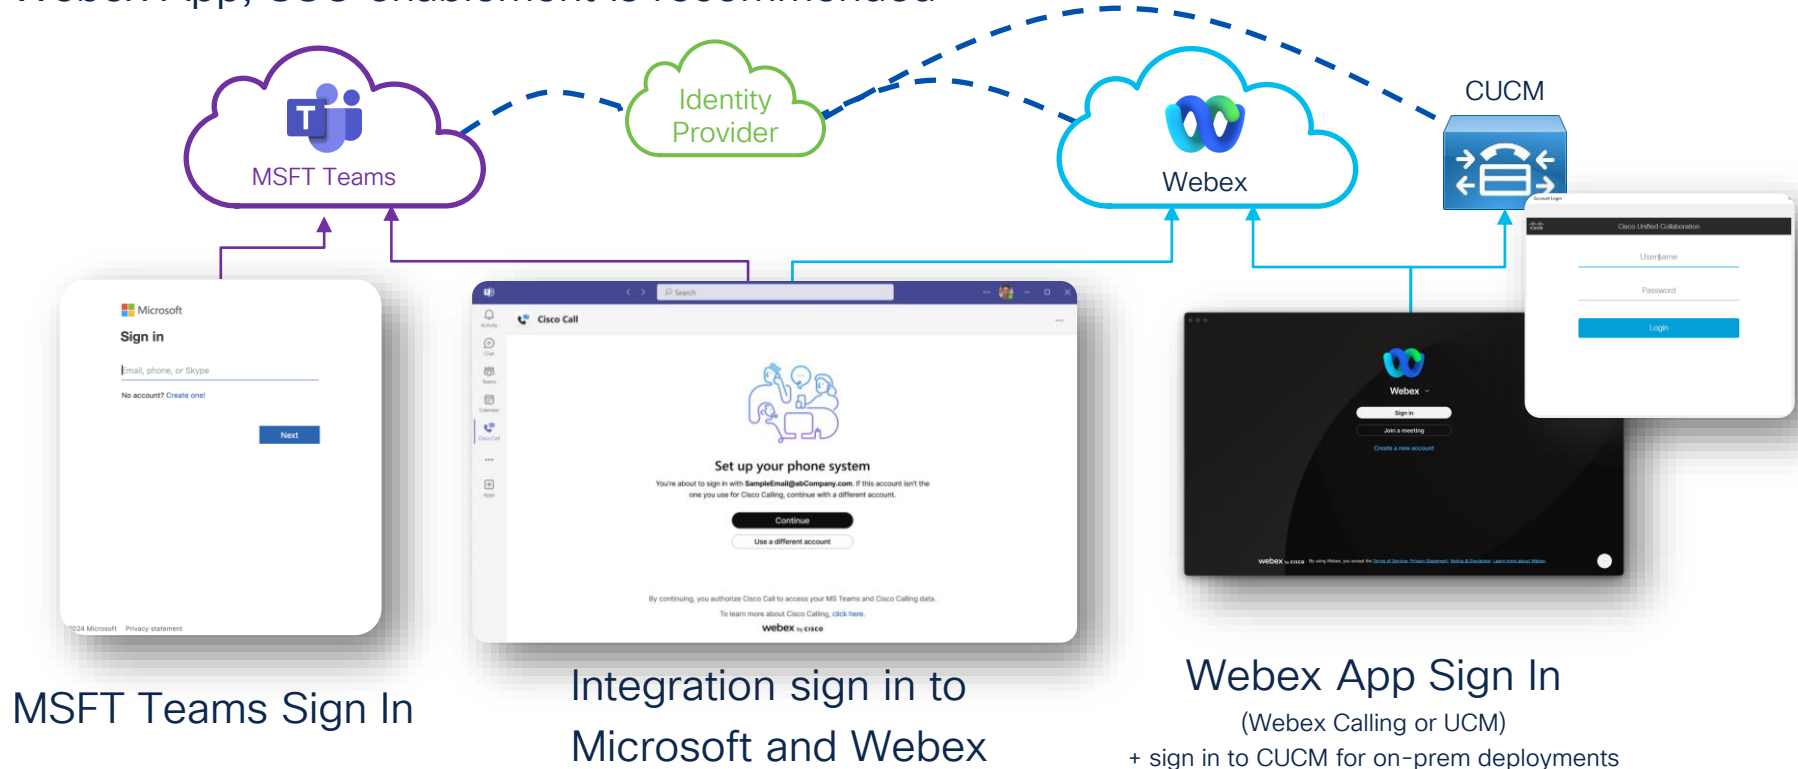

Single Sign On Architecture

Single Sign On across Microsoft and Webex

As users need to sign in to Microsoft Teams, to the integration and to the Webex App, SSO enablement is recommended

cisco Live!

Call History architecture for CUCM

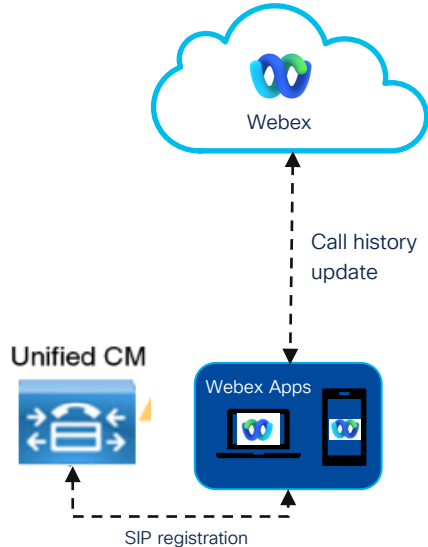

Local Call History vs Common Call History

For UCM Calling

Local Call History

- Records from calls made/received by Webex apps.
- No synchronization with other devices

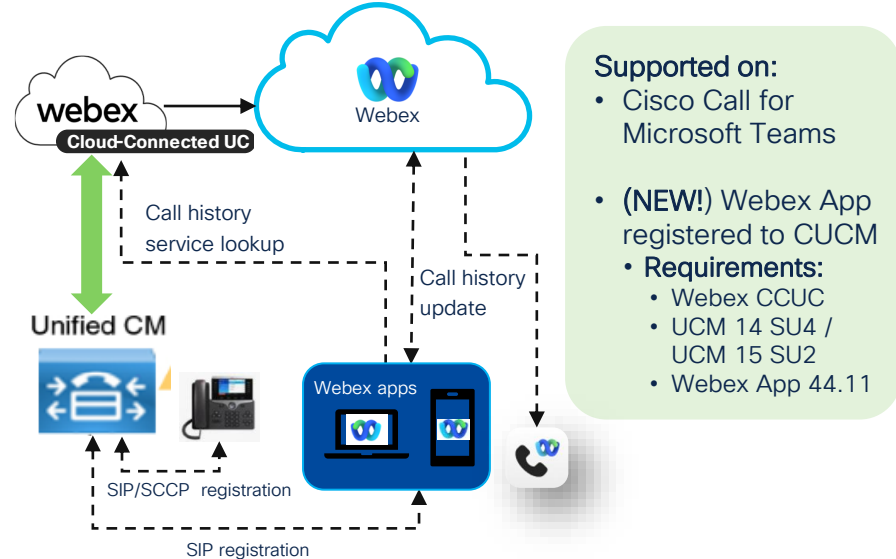

Supported on:

- Webex App registered to CUCM

Common Call History

Synchronized call history across Webex apps and phones which are registered to CUCM.

Supported on:

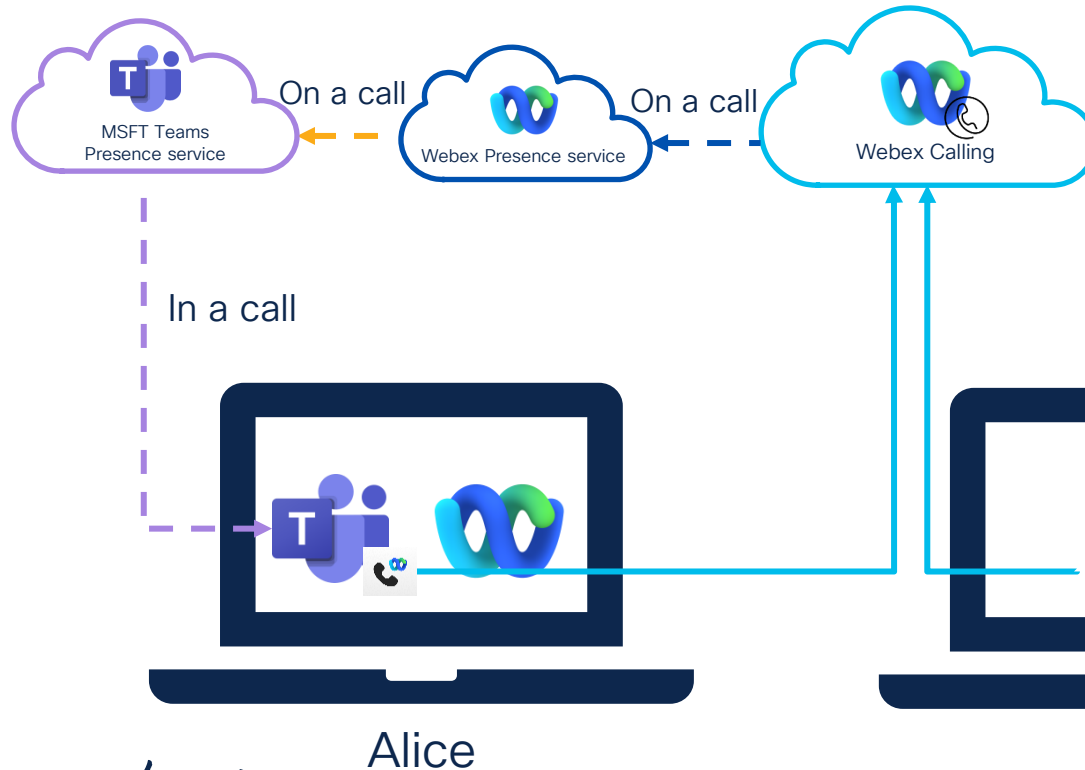

- Cisco Call for Microsoft Teams
- (NEW!) Webex App registered to CUCM
- **Requirements:**
 - Webex CCUC
 - UCM 14 SU4 / UCM 15 SU2
 - Webex App 44.11

Presence Sync architecture

Presence Sync Architecture

Making calls through the Calling integration

Alice **calls** Bob using the integration → Alice's Webex presence is set to "**On a call**"

Webex presence service pushes "**On a call**" update to MSFT Teams presence service for Alice

Alice's MSFT Teams **presence** is updated to "**In a call**"

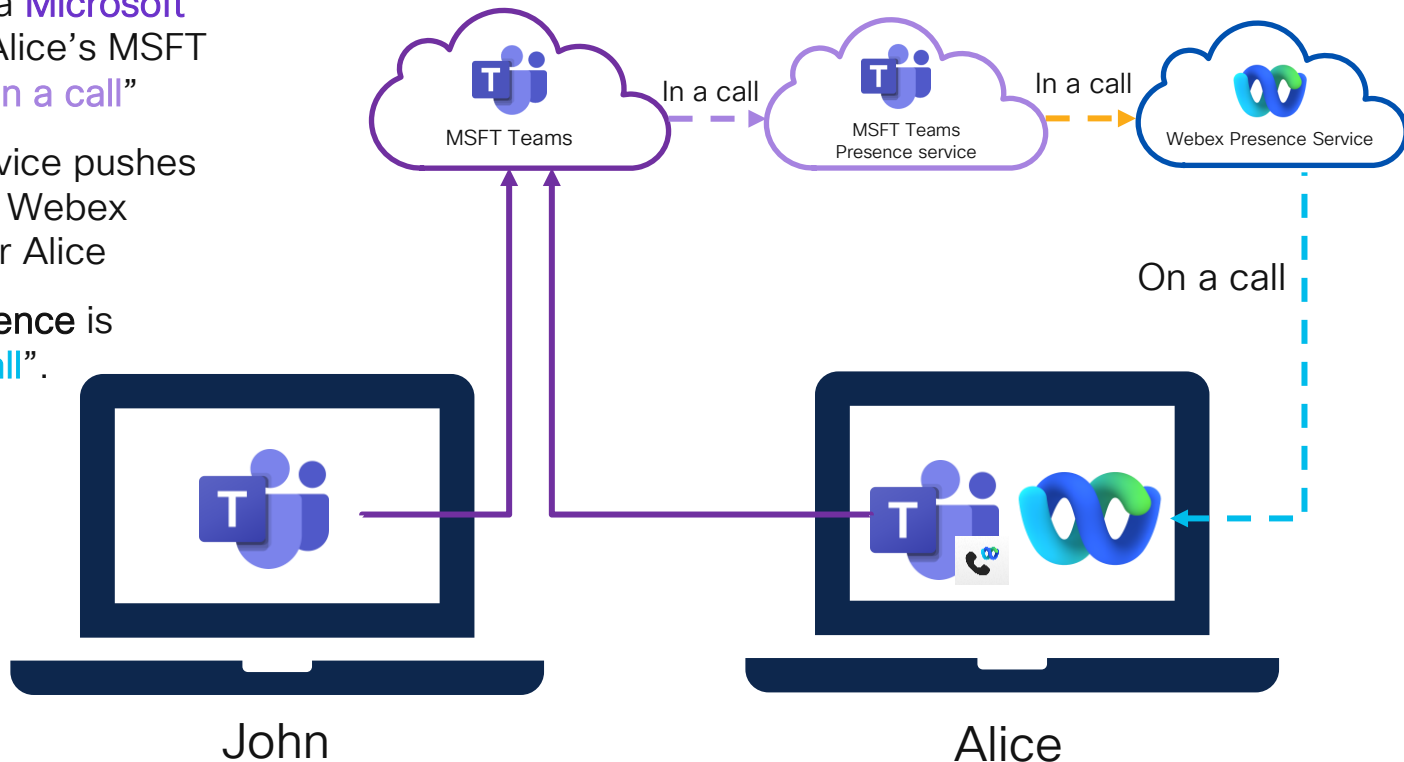

Presence Sync Architecture

Joining a Microsoft Teams meeting

Alice and John join a **Microsoft Teams meeting** → Alice's MSFT presence is set to **"In a call"**

MSFT presence service pushes **"In a call"** update to Webex presence service for Alice

Alice's Webex presence is updated to **"On a call"**.

Solution deployment

Cisco Call for Microsoft Teams Deployment

Configure Webex Organization

- ✓ Configure Single Sign On
- ✓ Assign Calling licenses
- ✓ Enable Presence Sync
- ✓ Enable Single App experience

Deploy Webex App

- ✓ Push App to devices

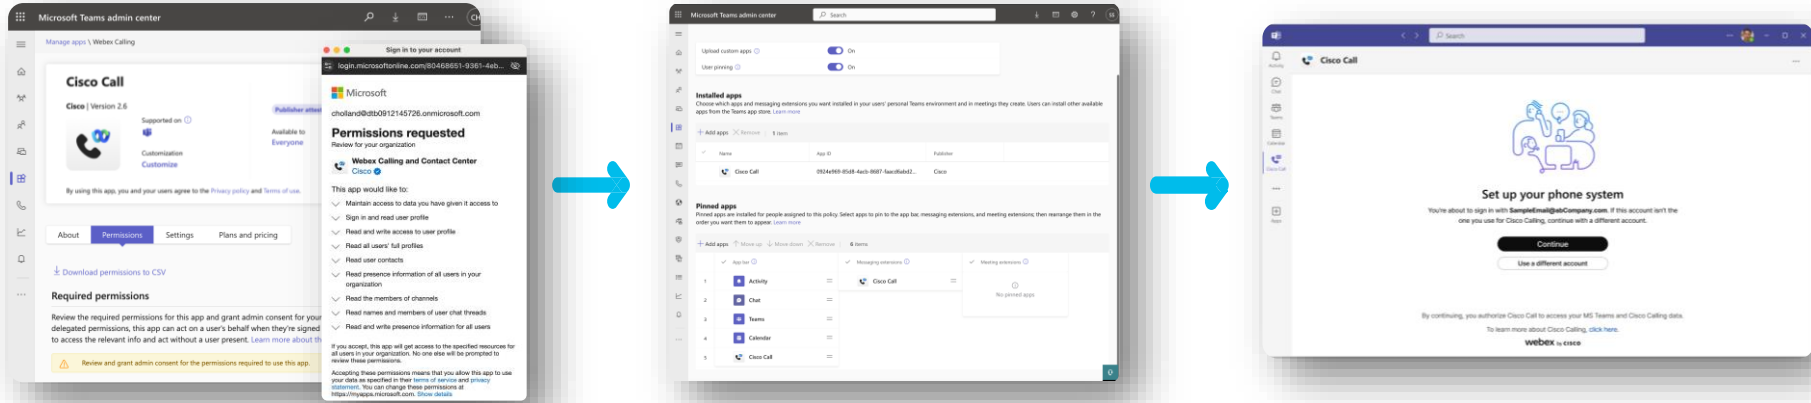

Enable Cisco Call for Microsoft Teams on Teams Admin Center

- ✓ Enable Integration
- ✓ Assign policies
- ✓ Optional: Customize the integration

Enable other Webex features

- ✓ Enable Calling Dock
- ✓ Enable Call Queues
- ✓ Enable multi-line
- ✓ Etc

Enable Cisco Call for Microsoft Teams

Customer admin **allows Cisco Call** app.

Admin can grant **Microsoft permissions**

Customer admin can **pre-install Cisco Call** App or allow users to install it themselves

Cisco Call App can be deployed to all or groups of users with MS Teams App Setup policy

End users will log in to the integration for the first time. **Webex permissions will be auto-accepted** in the back end.

Admin will also accept **Microsoft permissions** at this step if they have not been granted by admin from Teams Admin Center

Configure Cisco Call for MS Teams

Webex Calling Integration Authorization Scope

Microsoft Graph API Scope

The integration will ask for the following **MSFT Teams permissions** during authorization

<https://learn.microsoft.com/en-us/graph/permissions-reference>

For your
reference

Microsoft
cholland@example.com

Permissions requested
Review for your organization

 Cisco Call

This app would like to:

- ✓ Maintain access to data you have given it access to
- ✓ Sign in and read user profile
- ✓ Read and write access to user profile
- ✓ Read all users' full profiles
- ✓ Read user contacts
- ✓ Read presence information of all users in your organization
- ✓ Read the members of channels
- ✓ Read names and members of user chat threads
- ✓ Read and write presence information for all users

If you accept, this app will get access to the specified resources for all users in your organization. No one else will be prompted to review these permissions.

Accepting these permissions means that you allow this app to use your data as specified in their terms of service and privacy statement. You can change these permissions at <https://myapps.microsoft.com>. [Show details](#)

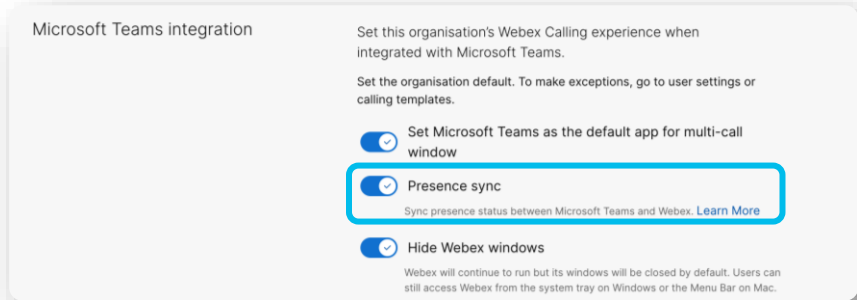

Some permissions have [delegated access](#), which require action from the user.

Permission	Purpose	Delegated?
offline_access	Allows the Integration Tab to generate a new access token without asking the user to re-authorize often	No
User.Read	Allows the Integration Tab to read the user's basic information such as the email address	No
User.ReadWrite	Allows the integration Tab to store speed dials in user profiles	No
User.Read.All	Allows the Integration Tab to search for users in the active directory to make calls	Yes
Contacts.Read	Allows the Integration Tab to search for the user's outlook contacts to make calls	No
Presence.Read.All	Allows the integration Service to subscribe for presence status changes	Yes
Presence.ReadWrite.All	Allows the Integration Service to subscribe for presence status change notifications	No
ChannelMember.Read.All	Allows the Integration Message Extension to read members of a channel so that the user can search for a specific channel member to call	Yes
Chat.ReadBasic	Allows the integration Message Extension to read members of a group chat so that the user can search for a specific member to call	No

Presence Sync configuration

Admin tasks

Enable Presence Sync on **Control Hub**

Accept **Microsoft related permissions***

- Read Presence information of all users in your organization
- Read and write Presence information for all users

*These Microsoft permissions are accepted when enabling the integration on MSFT Teams. They won't need to be accepted again after enabling Presence Sync on Control Hub

End user tasks

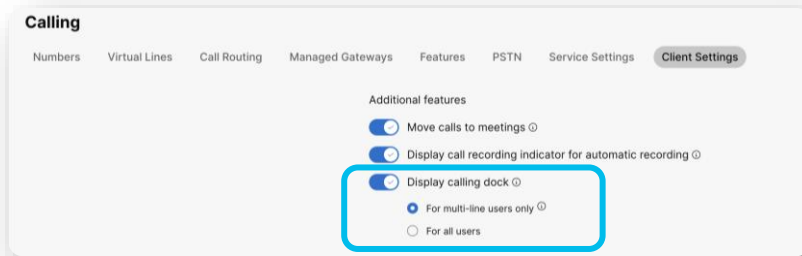

Sign in to the integration **at least once** after enabling presence sync

Sign in to the integration **once every 90 days**

Calling dock configuration

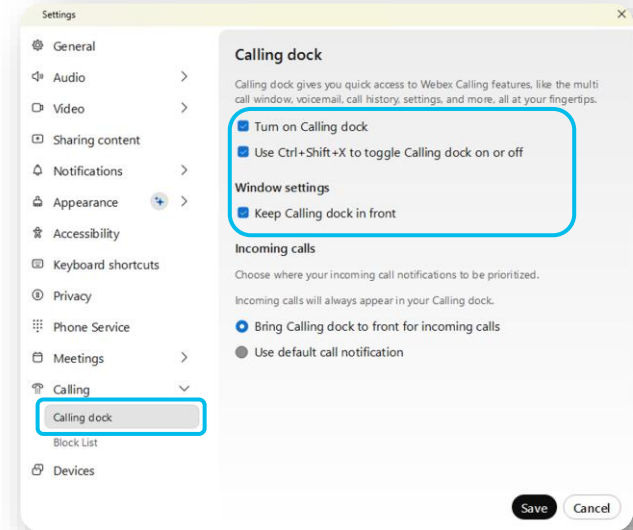

Admin

Admin can enable Calling Dock on Control Hub per users, groups or organization

End user

Users can decide whether to show it or not from the Webex App [Calling Settings](#)

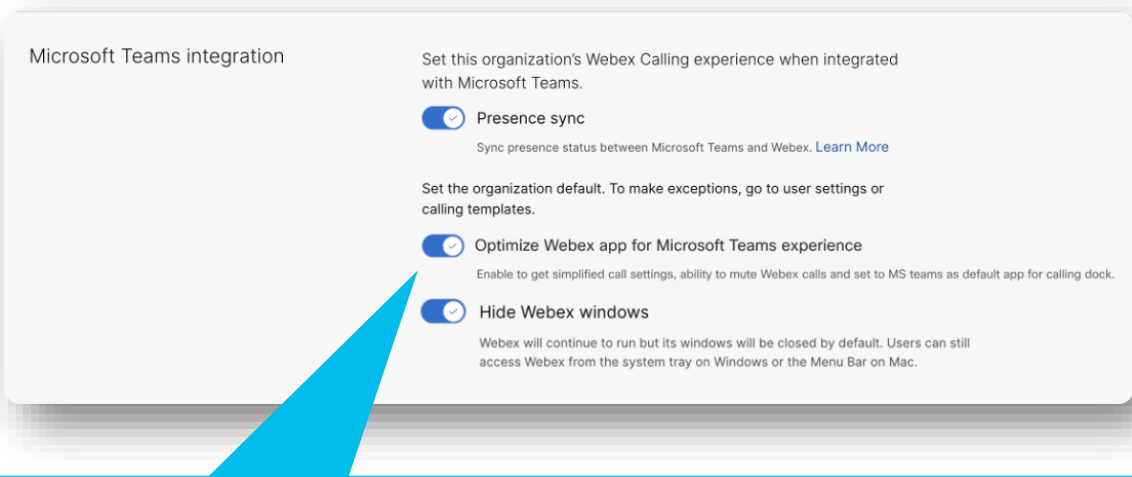

Optimize Webex App for Microsoft Teams experience

- ✓ Remove Webex branding from In-Call window and Calling Dock
- ✓ Link Calling Dock to MS Teams
- ✓ Ability to mute Webex calls when on Teams meetings
- ✓ User can only open the Calling Dock (not the full Webex App)
- ✓ Enable E911 warning

Coming in March 2025:

- ✓ Phone Disconnection banner
- ✓ Simplified Call Settings
- ✓ Calling Dock toggle

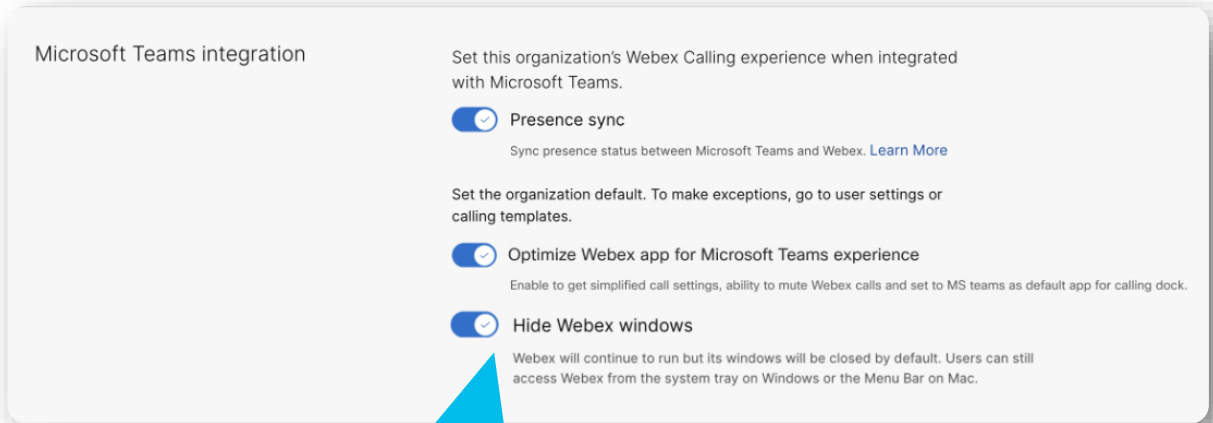

Optimize Webex app for Microsoft Teams experience

Enable to get simplified call settings, ability to mute Webex calls and set to MS teams as default app for calling dock.

Hiding Webex App

Configure setting to hide Webex App in Webex Control Hub

✓ Webex App running in the background

Hide Webex windows

Webex will continue to run but its windows will be closed by default. Users can still access Webex from the system tray on Windows or the Menu Bar on Mac.

Best Practices for a better User Experience

Webex App login

For first time login:

- ✗ Don't create a shortcut of the Webex App on the users' desktops
- ✓ The Webex App login page will pop-up when signing in to the integration

CISCO *Live!*

Contact Resolution

Entra ID required for contact search:

- ✓ Sync Entra ID with Webex Common Identity

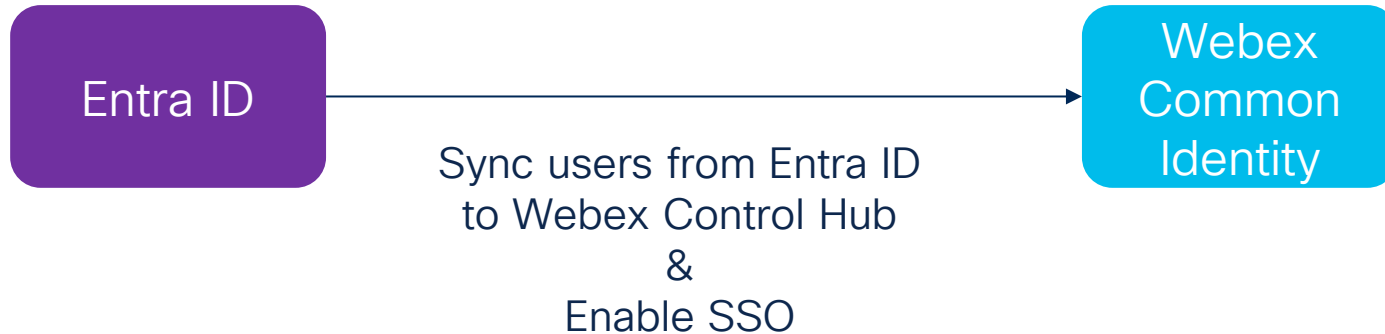

Single Sign On

- ✓ Enable SSO for easier user login

Directory sync best practices

Syncing users from Entra ID to Webex Common Identity service

Directory sync allows to have the same contact resolution on the dial pad and on the call window.

Directory sync best practices

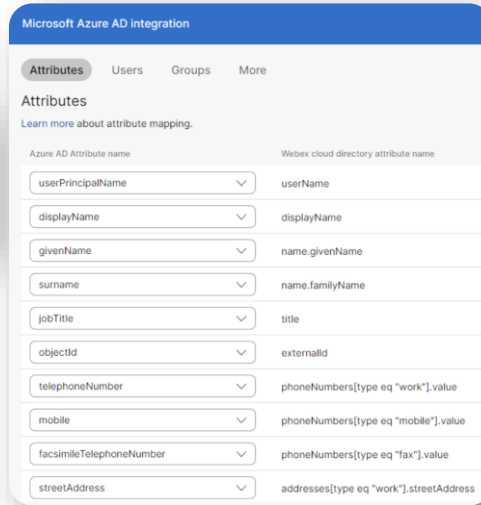

Entra ID and Webex Common Identity sync & SSO

1) Set up **Directory Synchronization** with Microsoft Entra ID (formerly Azure AD) Wizard App on Webex Control Hub.

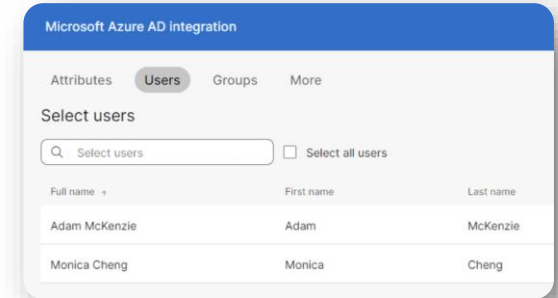

2) Select **Default Sync** for a default attribute mapping and user sync. Otherwise, customize those values (3 and 4)

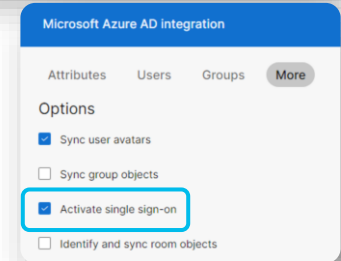

3) If no default sync, customize the **attributes to map** between Entra ID and Webex CI.

4) If no default sync, choose which **users** to bring from Entra ID to Webex CI (individual users or Entra ID groups)

5) Enable **Single Sign-On**

[Synchronize Azure Active Directory users into Control Hub](#)

Extra configuration for CUCM and Webex Calling DI as the Calling platform

Using on-prem CUCM or Webex Calling DI as the calling platform

Pre-requisites

Access to Control Hub

Set up Webex **Cloud-Connected UC** for CUCM (for Call History, My Number and Presence) and Unity Connection (for Voicemail)

For **Webex Calling DI**, these are enabled by default.

CUCM configuration (also valid for Webex Calling DI)

CUCM Version: **12.5 SU7+, 14 SU3+ or 15 SU2+**

The **line number** on CUCM needs to be **associated to the User ID** for the call presence to be populated with the username

Users sync to Control Hub

Users should be synced either from on-prem Active directory or from Cloud AD such as Entra ID to Control Hub common identity (CI).

The User ID and Mail ID of the users in CUCM should **be aligned with** the user's **email address** in **Control Hub**.

Using CUCM as the calling platform

Enable Voicemail, Call History and Presence Sync

To enable Call History, Voicemail or Presence for CUCM, extra configuration is required from [Cloud Connected UC](#) settings (under UC Management/Inventory)

- Enable [Centralised call history](#) and [Presence Sync](#) on Cisco Unified CM (CUCM) cluster groups
- Enable [Voicemail](#) toggle on Cisco Unity Connection (CUC) cluster group

Note: After enabling Presence/Call History/Voicemail for the first time, It takes up to 8-12 hours for changes to be reflected

CUCM cluster group

Service management

Changes to these settings will take a short time to take effect.

Analytics	<input checked="" type="checkbox"/>	Enabled
Directory service	<input checked="" type="checkbox"/>	Enabled
Certificate Management	<input checked="" type="checkbox"/>	Enabled
Operational metrics	<input checked="" type="checkbox"/>	Enabled
Presence status sync	<input checked="" type="checkbox"/>	Enabled
Webex app provisioning for Unified CM Calling	<input checked="" type="checkbox"/>	Enabled
Centralised call history	<input checked="" type="checkbox"/>	Enabled
Deployment Insights	<input checked="" type="checkbox"/>	Enabled

CancelSubmit

Common issues with Call History

For CUCM/Webex Calling DI customers

Problem	Reason	Resolution
Call History not showing any number	CCUC misconfiguration	<ul style="list-style-type: none"> • Ensure clusters are online • Ensure “Call History” is checked under Service Management for CUCM cluster
Call History not matching numbers with usernames (only numbers appear)	Directory sync misconfiguration	<ul style="list-style-type: none"> • Ensure the line number on CUCM is associated to the User ID • Ensure user’s Mail ID in CUCM matches the user’s email in Control Hub

Roadmap: We are documenting more cases to help customers use CUCM with CCUC

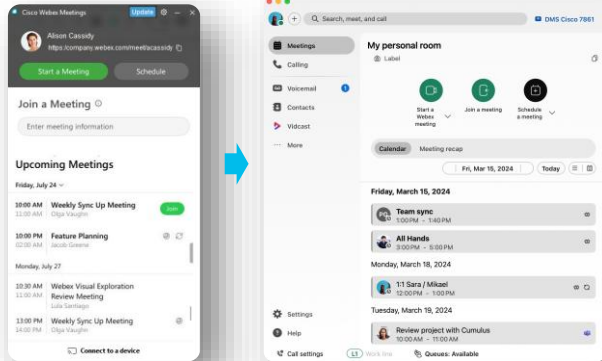

Webex App and Microsoft Teams customization

Webex Meetings + Calling customers

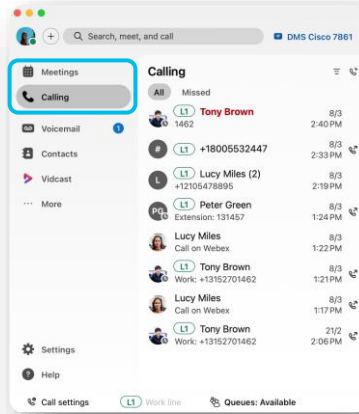

New Webex Suite Meeting Platform

With [Webex Suite Meeting Platform](#), the Webex App is used for Webex Meetings.

Webex App customization

The Webex App can be **customized** to show only the services needed

Keep the Webex App visible

Customers can keep keep the Webex App **unhidden** for easy access.

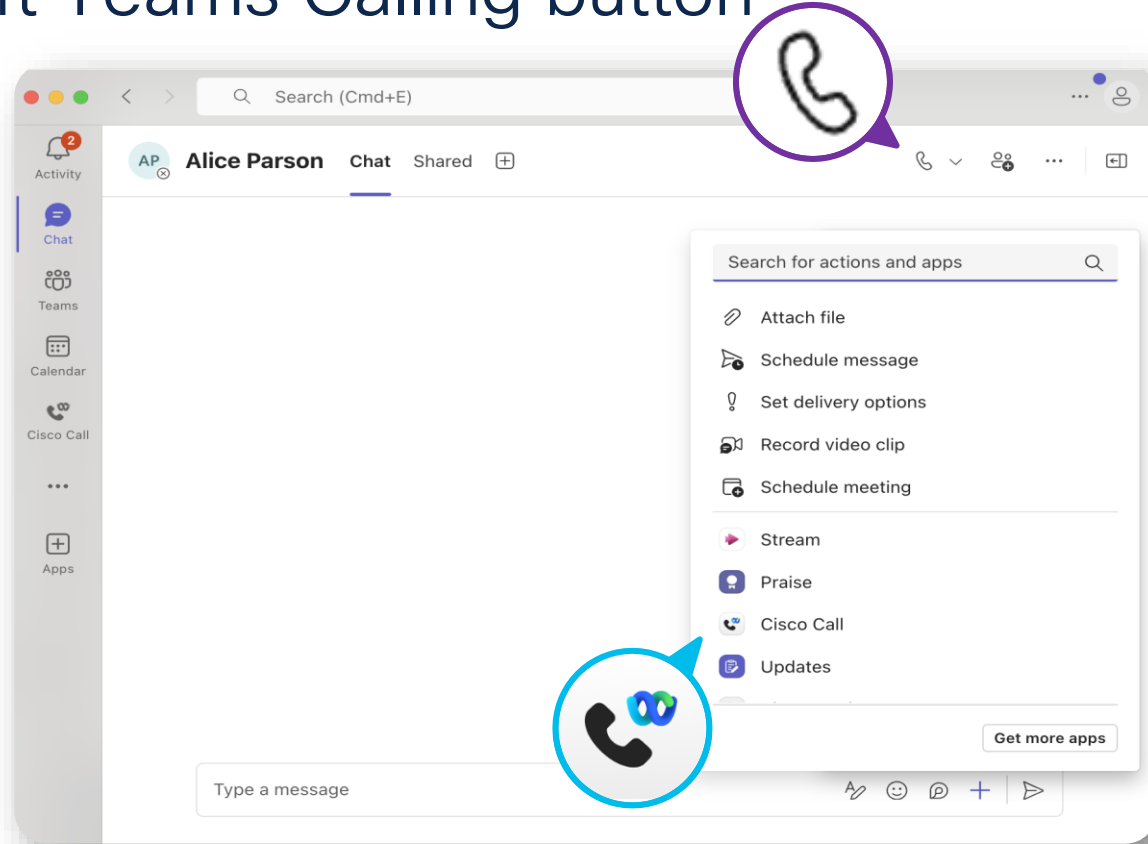

Meetings can also be scheduled from Outlook

Hiding the Microsoft Teams Calling button

Finding **MSFT Teams-to-Teams** calling button and the **Cisco Call button** on a chat window could be confusing.

We will look at **different scenarios** to evaluate when to hide the MSFT Teams calling button.

Calling scenarios

Ideally Microsoft Teams-to-Teams Calling button should be disabled

But depending on the customer scenario, we can customize Microsoft Teams calling policies to **hide or show** the Microsoft Teams-to-Teams calling button.

The following **scenarios** are considered:

Full Cisco Calling scenario

Only **Cisco Call** button is used

Hybrid scenario

Both **Cisco Call** and **MSFT Teams-to-Teams calling** buttons are used

cisco *Live!*

Full Cisco Calling scenario

For customers who:

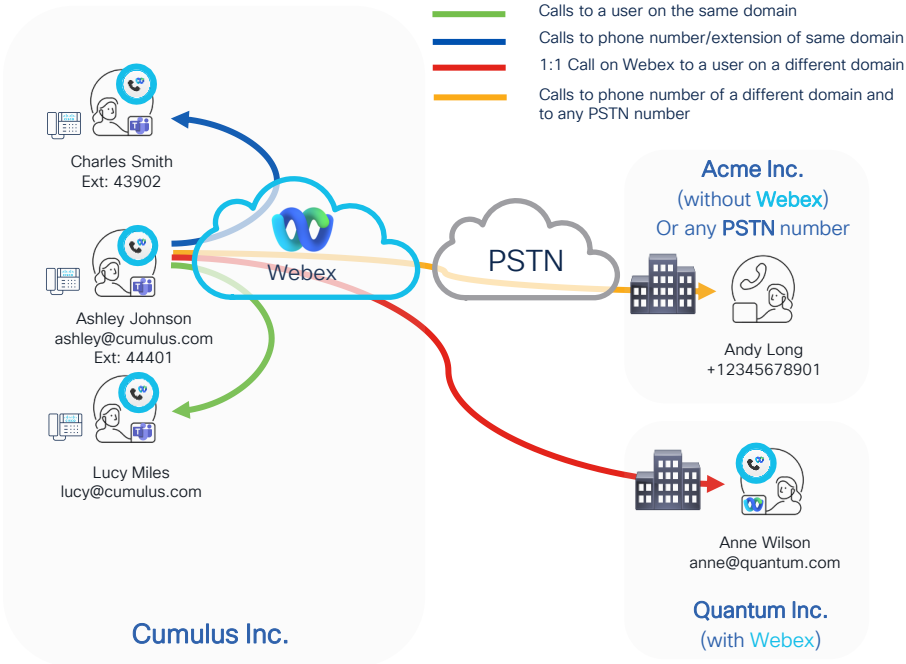

- Use **Cisco Call** for internal, external and PSTN calls
- Rarely use **MSFT Teams-to-Teams** calling to call external (Microsoft federated) users from a conversation

Hybrid scenario (suboptimal)

For customers who:

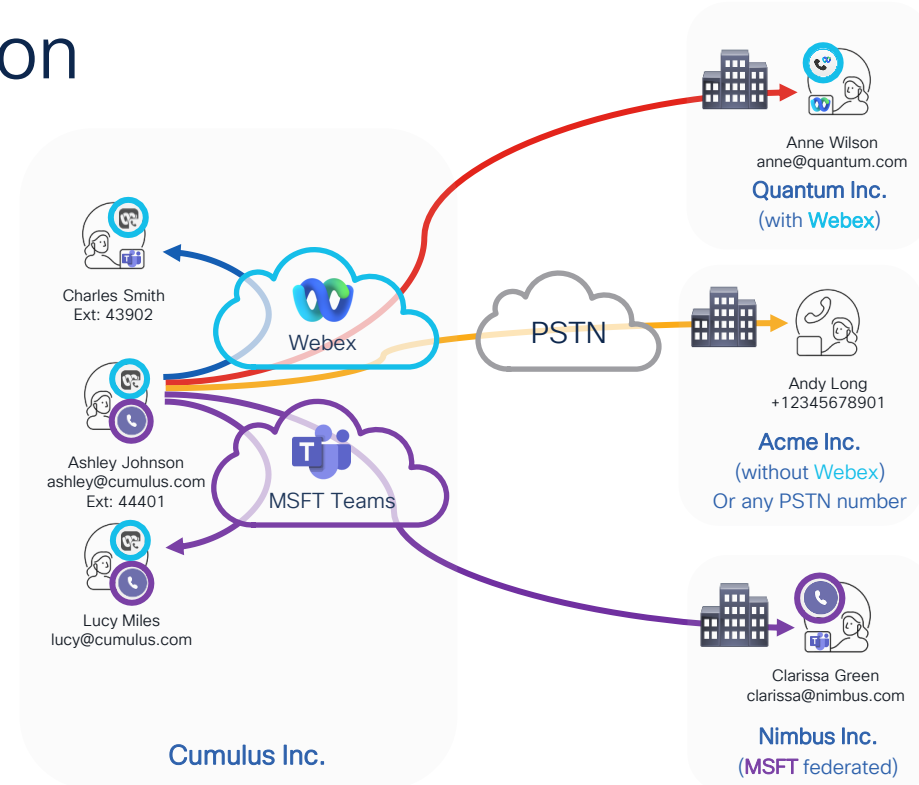

- Use **Cisco Call** for enhanced VoIP and PSTN calls
- Use **MSFT Teams-to-Teams** to call internal and external (Microsoft federated) users from a conversation

Scenarios for customization

Full Cisco Calling scenario

cisco *Live!*

Hybrid scenario
(suboptimal)

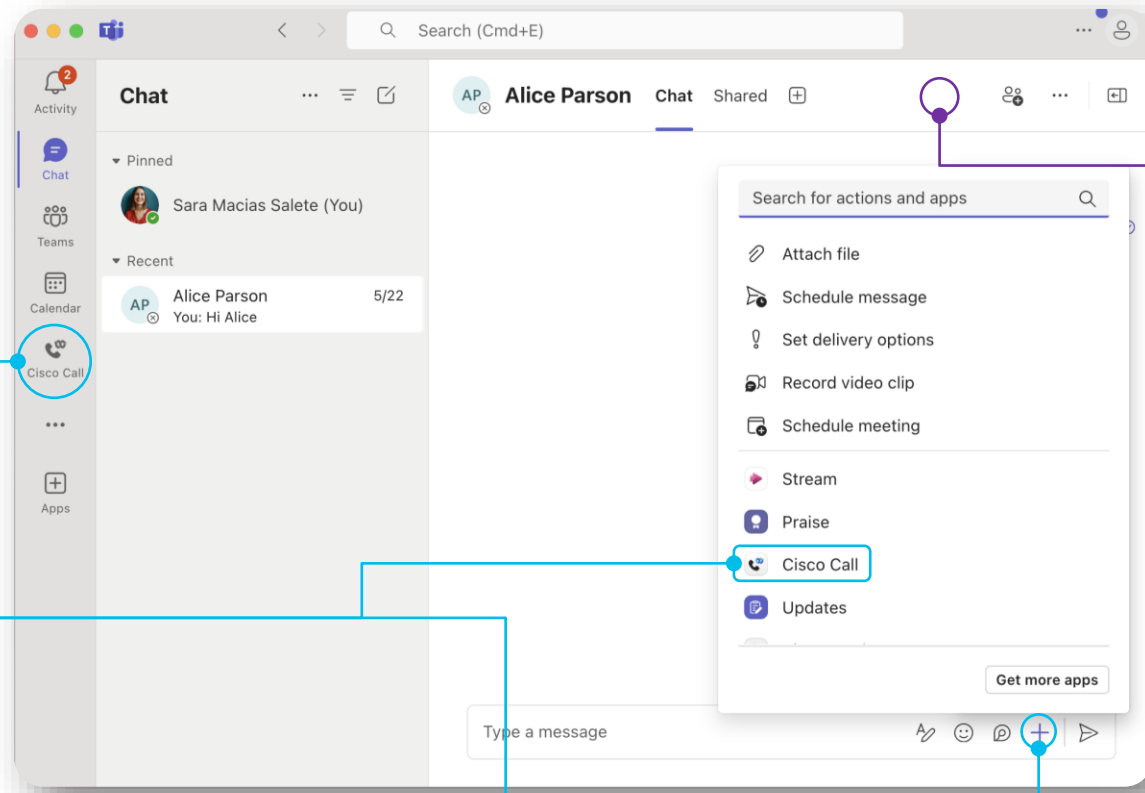

Recommendations for Full Webex scenario

Webex for internal, external and PSTN calls

Cisco Call
button
available from
the apps bar

Cisco Call
available from the
messaging
extension
(clicking on the +
button)

Teams-to-
Teams calling
button
disabled

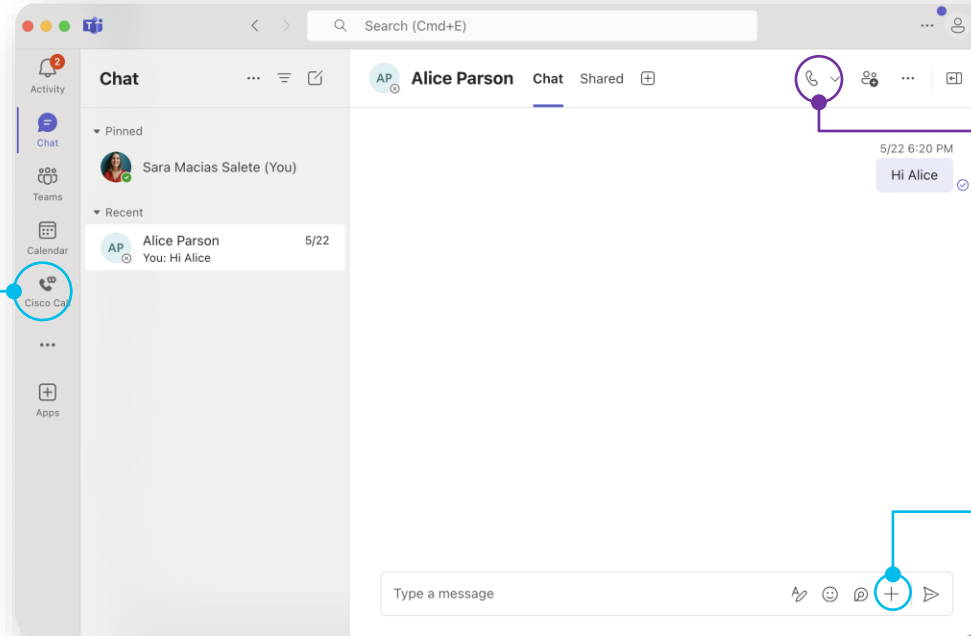

Recommendations for Hybrid scenario (suboptimal)

Webex for enhanced VoIP and PSTN and Teams-to-Teams for VoIP

Teams-to-Teams calls will be used for VoIP calls

Cisco Call will be used for PSTN Calling or any VoIP calls with enhanced capabilities

Cisco Call button
available from the bar to make PSTN or internal calls with advanced capabilities

Teams-to-Teams calling button
available from the chat when chatting with any Teams user

Cisco Call only visible when clicking on the + button*

*Cisco Call (and all the apps) is disabled by default on chats with external (federated) users

Setup workflows - MSFT Teams Admin Center

Full Cisco Calling scenario

1. Disallow **Teams Calling**
2. Pre-install **Cisco Call app** for all users

Hybrid scenario

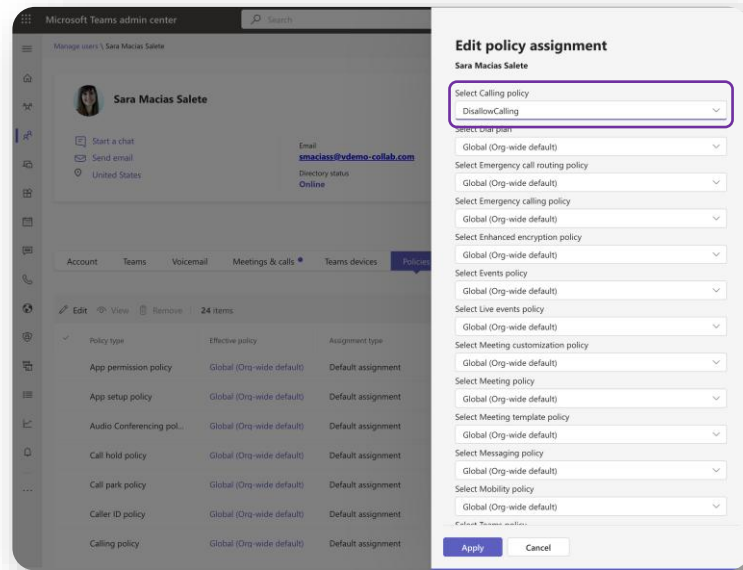

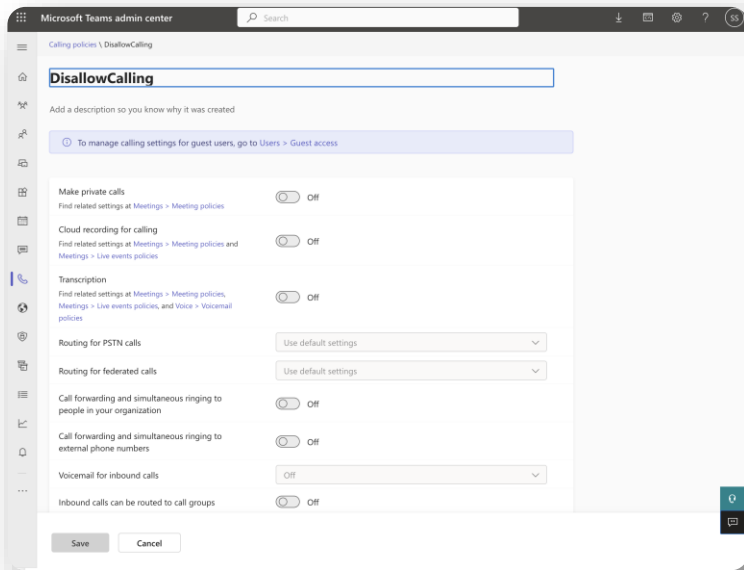

1. Add **Teams Calling** app
2. Pre-install **Cisco Call** app for all users
3. Remove **Teams Calling** from the App bar
4. Disable **Microsoft Teams Phone** (optional)

Disabling all Microsoft calling

Disabling MSFT Teams Phone (Call Control and PSTN) and Teams-to-Teams Calling

On the Calling policies for Voice, there is a policy named **DisallowCalling**, which disables Teams to Teams voice and video calling and Teams Calling

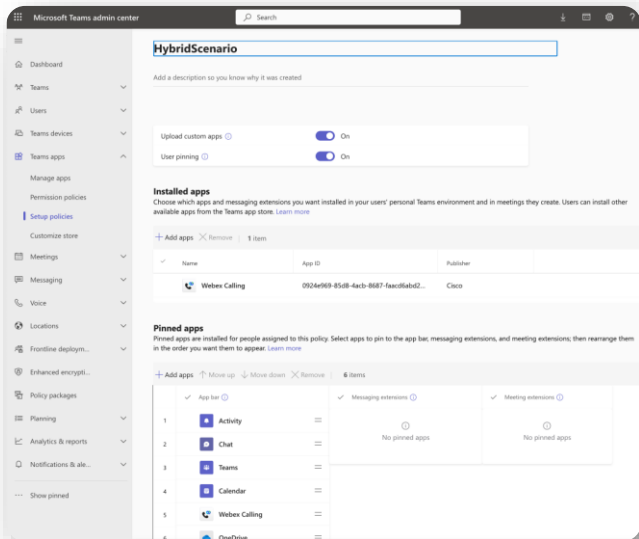

On **Manage users**, apply the Calling policy **DisallowCalling** to all users or to a subset of users

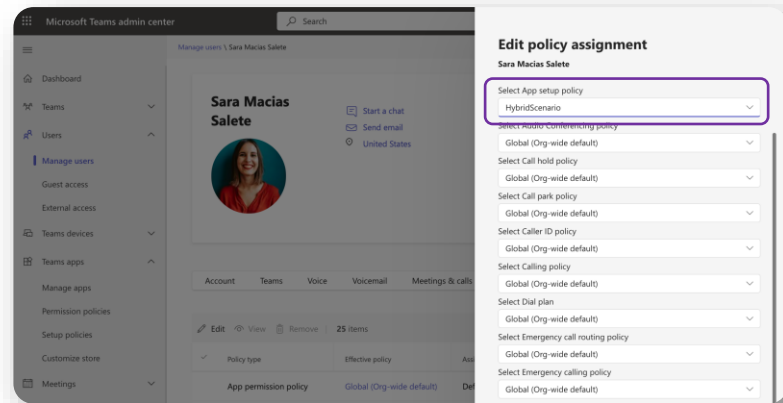

Configuration for Hybrid scenario

Creating a new App policy

On the **App policies**, create a new policy called **HybridScenario**. Remove Teams Calling from the App bar.

On **Manage users**, apply the new App policy **HybridScenario** to all users or to a subset of users

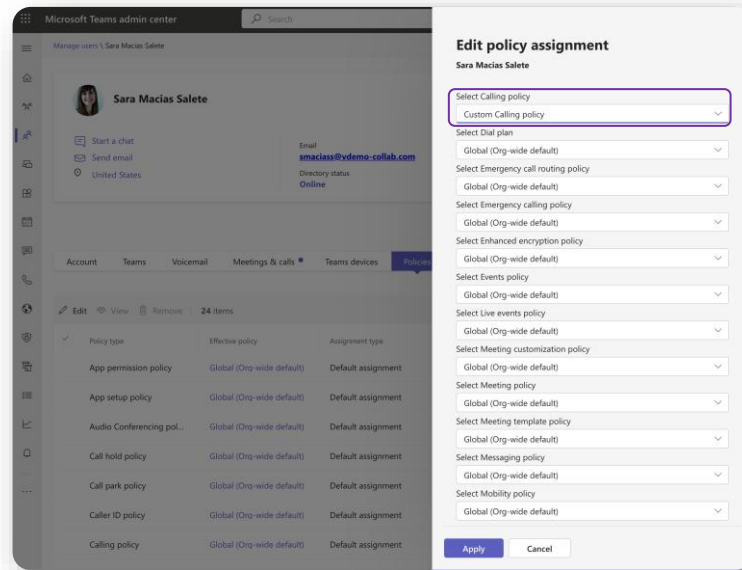

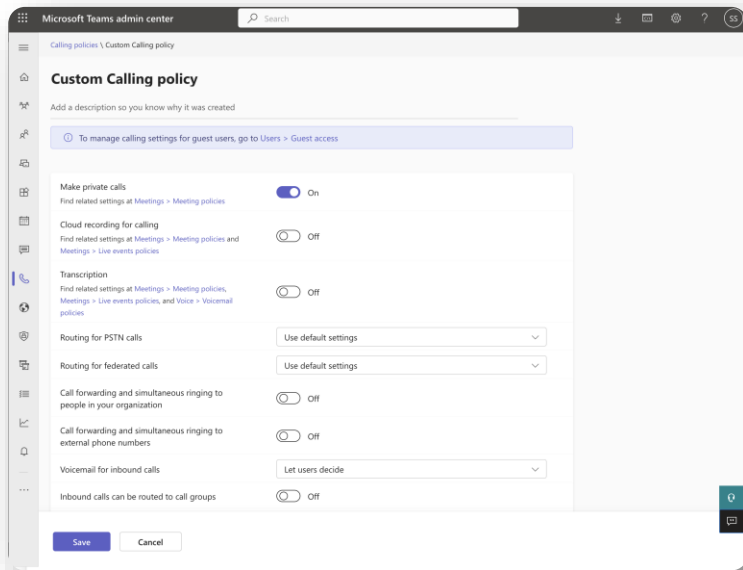

Note: you can also remove “Webex Calling App” from the messaging extension, but today there will be no changes to the UI as it will still show when clicking on the + button from the chat

Disabling Microsoft Teams Phone only

Create a customized Calling policy for Voice, disabling only some features for Teams Calling (Call Control features). Users will still be able to make private Teams to Teams calls

On **Manage users**, apply the new **Calling policy** to all users or to a subset of users

More info on Calling policies: <https://docs.microsoft.com/en-us/microsoftteams/teams-calling-policy>

Agenda

- Introduction
- Using Cisco Phones and Peripherals with Microsoft Teams
- Direct Routing for Microsoft Teams Phone
- Cisco Call for Microsoft Teams
- **Comparison matrixes**
 - The added value of Webex Calling vs Teams-to-Teams Calling
 - All Calling Integrations comparison

Comparison matrixes

Cisco Call for Microsoft Teams

The added value vs Teams-to-Teams Calling

	Cisco Call for Microsoft Teams	MSFT Teams-to-Teams Calling
Call internal users (VoIP)	✓	✓
Call external users (VoIP)	✓	✓
Call to/from PSTN	✓	✗
Survivability	✓	✗
IP Phones	✓	✗
Multi line	✓	✗
Queues/Hunt Groups	✓	✗
Watchlist (Webex Calling)	✓	✗
Mid call controls	✓	Limited
Intelligent Call Routing	✓	✗
Smart Audio	✓	✗
AI codec	✓	✗

All integrations Comparison Matrix

	Microsoft SIP Gateway	MS Direct Routing with CUBE	Interworking between UCM/Webex Calling and MS Teams Phone	Cisco Call for MS Teams
Calling platform	MS Teams Phone	MS Teams Phone	Cisco UCM/Webex Calling + MS Teams Phone	Webex Calling, CUCM
Cisco licensing	None	CUBE	Calling licenses + CUBE	Calling licenses
Microsoft licensing	Teams + Calling or Teams + E5 (if Teams not included)	Teams + Calling or Teams + E5 (if Teams not included)	Teams + Calling or Teams + E5 (if Teams not included)	Min E1 or Teams licensing
Who is this solution intended for?	Customers who want/have MS Teams Phone and Cisco phones	Customers who want/have MS Teams Phone and need an SBC for PSTN access	Customers who want/have both Cisco UCM/Webex Calling and MS Teams Phone	Customers who want/have Cisco Calling while using MS Teams for messaging
Challenges	Associated costs to convert Cisco Phones to MPP	No access to Cisco Calling platform advantages	Limitations apply, more complex deployment and higher cost	User will have two apps installed, although they will only see MS Teams

Frequently Asked Questions

For your
reference

Including some extra slides with FAQs for your reference

Q: With Cisco Call for Microsoft Teams, can I add to a [Microsoft Teams Meeting](#) a user that is on Webex but not on Microsoft Teams?

A: No. Call Controls are [independent](#)

Options:

- Add user with PSTN number → Call back or Microsoft Teams Phone needed
- Deploy interworking between Cisco Call control and Microsoft Teams Phone (Microsoft Teams Calling license and SBC required)

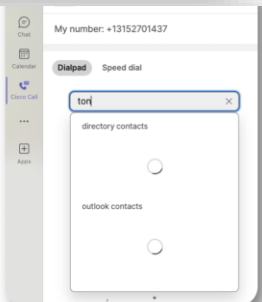

Q: Can I use these integrations to make a call from my [People tab](#) on Microsoft Teams or Outlook?

A: User must click on the [phone number](#). The call will follow the protocol handler [tel:](#), which can be configured locally to use the Webex App to make the call

Q: I have an [on-prem Active Directory](#) with LDAP. Can I search users in my directory on Cisco Call for Microsoft Teams?

A: User search for Cisco Call for Microsoft Teams works with [Entra ID only](#)

Q: If I [cannot login](#) to Microsoft Teams, can I still make calls?

A: If using Cisco Call for Microsoft Teams, users can still make calls using the [Webex App](#)

Q: What if I [lose internet](#) connection?

A: [Survivability](#) can be deployed for Webex Calling or CUCM

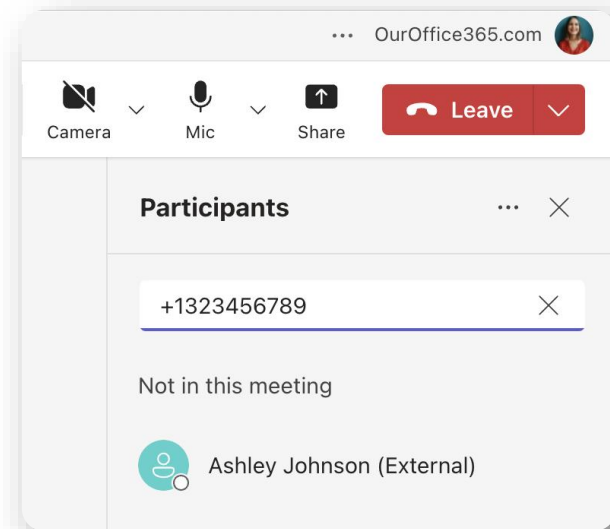

Frequently Asked Questions

Q: With Cisco Call for Microsoft Teams, can I add to a **Microsoft Teams Meeting** a user that is on Webex but not on Microsoft Teams?

A: No. Call Controls are **independent**

Options:

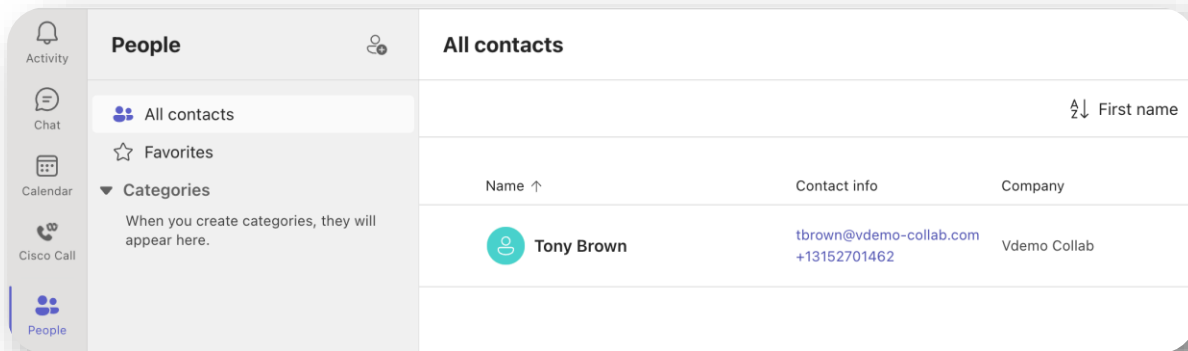

- Add user with PSTN number → Call back or Microsoft Teams Phone needed
- Deploy interworking between Cisco Call control and Microsoft Teams Phone (Microsoft Teams Calling license and SBC required)

Frequently Asked Questions

Q: Can I use these integrations to make a call from my **People tab** on Microsoft Teams or Outlook?

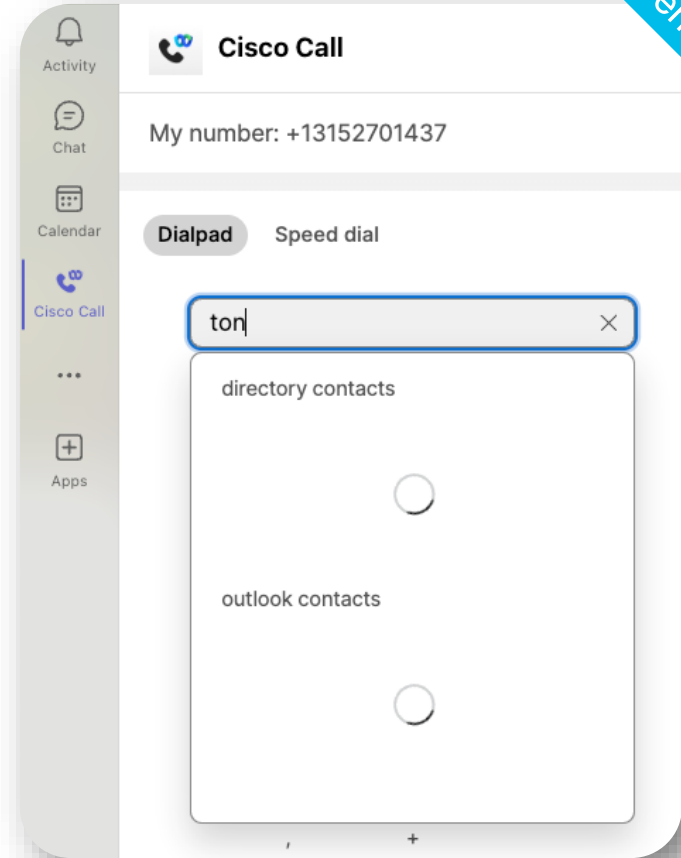

A: User must click on the **phone number**. The call will follow the protocol handler **tel:**, which can be configured locally to use the Webex App to make the call

Frequently Asked Questions

Q: I have an **on-prem Active Directory** with LDAP. Can I search users in my directory on Cisco Call for Microsoft Teams?

A: User search for Cisco Call for Microsoft Teams works with **Entra ID only**

Frequently Asked Questions

Q: If I **cannot login** to Microsoft Teams, can I still make calls?

A: If using Cisco Call for Microsoft Teams, users can still make calls using the **Webex App**

Q: What if I **lose internet** connection?

A: **Survivability** can be deployed for Webex Calling or CUCM

Closing

Fill Out Your Session Surveys

Participants who fill out a minimum of 4 session surveys and the overall event survey will get a unique Cisco Live t-shirt.

(from 11:30 on Thursday, while supplies last)

All surveys can be taken in the Cisco Events mobile app or by logging in to the Session Catalog and clicking the 'Participant Dashboard'

GO BEYOND

The background of the slide features a series of overlapping, teardrop-shaped elements in various shades of blue, ranging from light sky blue to deep navy blue. These shapes are arranged in a way that creates a sense of depth and movement, resembling stylized waves or a forest of tall, thin trees. The overall composition is clean and modern, with the text 'GO BEYOND' prominently displayed in the center.
