

The bridge to possible

# ACI Installation Guide for Red Hat OpenStack

## Using OSP16.2 Director

Leo Cui & Minhao Jin  
BRKDCN-1004

#CiscoLive

# Agenda

CISCO Live!

- Introduction
- ACI preparation
- ACI plugin installation  
in OSP director
- Overcloud installation
- Demo

# Introduction

# Introduction

- Both ACI and Openstack are knockout solutions facing SDN and Cloud computing market.

Currently, there is no existing Cisco Live session to present ACI and Openstack integration.

Although several Cisco Validated Design (CVD) documents covering this part are published, but they seem a little unfocused.

This session combines the essence of CVDs , it can save customer's time understanding the solution and ease the deployment and operation.

# Introduction

- This session covers below contents
  - Explanations about key point steps
  - Step-by-step guide for ACI-Openstack integration
  - Basic verification for a successful ACI-Openstack integration

# ACI preparation

# ACI preparation

- In the Cisco APIC GUI, disable the OpFlex authentication in the fabric.  
Make sure "To enforce Opflex client certificate authentication for GOLF and Linux." is not checked in System > System Settings > Fabric Wide Setting > Fabric Wide Setting Policy pane.

---

## Properties

- Disable Remote EP Learning:  To disable remote endpoint learning in VRFs containing external bridged/routed domains
- Enforce Subnet Check:  To disable IP address learning on the outside of subnets configured in a VRF, for all VRFs
- Enforce EPG VLAN Validation:  Validation check that prevents overlapping VLAN pools from being associated to an EPG
- Enforce Domain Validation:  Validation check if a static path is added but no domain is associated to an EPG
- Enable Remote Leaf Direct Traffic Forwarding:  Enable Remote Leaf direct communication with routable IP connectivity between Remote Leafs and Fabric, once enabled you cannot disable it again
- Opflex Client Authentication:  To enforce Opflex client certificate authentication for GOLF and Linux 
- Reallocate Gipo:  Reallocate some non-stretched BD gipos to make room for stretched BDs

# ACI preparation

- Setting Up the Cisco APIC and the Network
  - As per ACI/OSP integration guide, create AAEP, vlan pool, physical domain.
  - make sure “Enabled Infrastructure VLAN” option is checked

# ACI preparation

- Setting Up the Cisco APIC and the Network
  - Create Tenant, BDs, EPGs for OSP infra network

The screenshot shows the Cisco APIC interface for the 'CiscoLive-OSP16.2\_Infra' tenant. The left sidebar navigation includes 'Quick Start', 'Application Profiles' (selected), 'Application EPGs' (selected), 'uSeg EPGs', 'Networking' (selected), 'Bridge Domains' (selected), 'VRFs', and 'vrf'. The main content area is titled 'Application EPGs' and displays a table of eight entries:

Name	Alias	Desc	Class ID	Preferred Group Member	Flood in Encapsulation	Bridge Domain	QoS class	Intra EPG Isolation	In Shutdown
epg_External			49157	Exclude	Disabled	bd_External	Unspecified	Unenforced	No
epg_Internal_API			49158	Exclude	Disabled	bd_Internal_API	Unspecified	Unenforced	No
epg_Management			49159	Exclude	Disabled	bd_Management	Unspecified	Unenforced	No
epg_Provision			49160	Exclude	Disabled	bd_Provision	Unspecified	Unenforced	No
epg_Storage			49161	Exclude	Disabled	bd_Storage	Unspecified	Unenforced	No
epg_StorageMgmt			16387	Exclude	Disabled	bd_StorageMgmt	Unspecified	Unenforced	No
epg_Tenant			16388	Exclude	Disabled	bd_Tenant	Unspecified	Unenforced	No

# ACI preparation

- Setting Up the Cisco APIC and the Network
  - Add physical domain for each EPG

The screenshot shows the Cisco Application Policy Infrastructure Controller (APIC) web interface. On the left, there is a navigation sidebar with the title "CiscoLive-OSP16.2\_infra". Under "CiscoLive-OSP16.2\_infra", there are sections for "Application Profiles", "Application EPGs", "Domains (VMs and Bare-Metals)", and "EPG Members". The "Domains (VMs and Bare-Metals)" section is currently selected. On the right, a table titled "Domains (VMs and Bare-Metals)" displays a single row for "PD\_ACL\_OSP". The table columns include: Domain, Type, Deployer, Resolution, Allow Micro-Segmentat, Primary VLAN, Port Encap, Switching Mode, Encap Mode, Cos Value, Enhanced Lag Policy, and Custom EPG Name. The "Type" column shows "Physical Domain", and the "Cos Value" column shows "Cos0".

Domain	Type	Deployer	Resolution	Allow Micro-Segmentat	Primary VLAN	Port Encap	Switching Mode	Encap Mode	Cos Value	Enhanced Lag Policy	Custom EPG Name
PD_ACL_OSP	Physical Domain					native	Auto		Cos0		

# ACI preparation

- Setting Up the Cisco APIC and the Network
  - Static binding port with designed encapsulation VLAN

The screenshot shows the Cisco APIC interface for the 'CiscoLive-OSP16.2\_infra' tenant. On the left, the navigation tree is expanded to show the 'CiscoLive-OSP16.2\_infra' tenant, its sub-profiles ('Application Profiles', 'OSP16.2\_infra'), and various EPGs ('epg\_External', 'epg\_Internal\_API', 'Domains (VMs and Bare-Metals)', 'EPG Members'). The 'Static Ports' node under 'Static Leaf' is selected. On the right, the 'Static Ports' table displays one entry for 'Node: Pod-1'. The table columns are: Path, Primary VLAN for Micro-Seg, Port Encap (or Secondary VLAN for Micro-Seg), Deployment Immediacy, Mode, and PTP. The entry shows 'Pod-1/Node-101/eth1/46' as the Path, 'unknown' as the Primary VLAN, 'vlan-2151' as the Port Encap, 'On Demand' as Deployment Immediacy, 'Trunk' as Mode, and 'Disabled' as PTP.

Path	Primary VLAN for Micro-Seg	Port Encap (or Secondary VLAN for Micro-Seg)	Deployment Immediacy	Mode	PTP
Pod-1/Node-101/eth1/46	unknown	vlan-2151	On Demand	Trunk	Disabled

Note:

In this demo, we design encapsulation VLAN for OSP infrastructure like Storage: 2153 , StorageMgmt: 2154 , InternalAPI: 2151 , Tenant: 2152 , Management: 2160  
External uses OOB and provision is through another individual network

# ACI plugin installation in OSP director

# ACI plugin installation in OSP director

- To check recommended plugin version via matrix link

Note:

in this demo, aci fabric is 4.2.7s+OSP 16.2. we will download plugin 5.2(7.20230127)

# ACI plugin installation in OSP director

- Download the Cisco ACI OSP (tripleo-ciscoaci-16) RPM 5.1.3 or later and the corresponding plug-in tarball (openstack-ciscorpmss-repo-16) from Cisco.com and place them on the OpenStack Platform Director.

[https://software.cisco.com/download/home/285968390/type/286304714/  
release/5.2\(7.20230127\)](https://software.cisco.com/download/home/285968390/type/286304714/release/5.2(7.20230127))

Repo packages of ACI Plugin for RedHat Openstack 16 <a href="#">🔗</a>	27-Jan-2023	9.79 MB	<a href="#"> </a>

Red Hat OpenStack Platform 16 files for ACI <a href="#">🔗</a>	27-Jan-2023	0.03 MB	<a href="#"> </a>
tripleo-ciscoaci-16.1-1232.noarch.rpm			
<a href="#">Advisories ↗</a>			

# ACI plugin installation in OSP director

- Install the downloaded RPM :
  - You must follow the *Director Installation and Usage, Red Hat OpenStack Platform 16.2* document to prepare the OpenStack Platform 16.2 Director and create the correct deployment and resource files.
  - After you set up the OpenStack Platform Director, you must install the Cisco Application Centric Infrastructure (ACI) TripleO orchestration before proceeding with deployment
  - Goto directory where aci rpm file places.  
Run the following command:  
`sudo yum -y localinstall --nogpgcheck tripleo-ciscoaci-16.1-1232.noarch.rpm`

# ACI plugin installation in OSP director

- Create the Cisco ACI containers by completing the following steps:
  - Run the following command:  
`sudo podman login registry.redhat.io`
  - When prompted, use your Red Hat credentials to enter the redhat username and password

# ACI plugin installation in OSP director

- Create the Cisco ACI containers by completing the following steps:

- After you log in, run the following script as root to create the Cisco ACI containers, point the script to the downloaded plug-in tarball:

```
sudo /opt/ciscoaci-tripleo-heat-templates/tools/build_openstack_aci_containers.py  
-z /home/stack/openstack-ciscormps-repo-16.1-1232.tar.gz
```

- It creates an environment file named `/home/stack/templates/ciscoaci_containers.yaml`, which should be included as a template during Overcloud deployment

Note:

During execution of the local container-creation command, you may see an error that is generated by the command `/bin/gbp-db-manage`. You can safely ignore this error, which should not cause the execution of the script to fail.

# Overcloud installation

# Overcloud installation

- Step 1

Copy the `/usr/share/openstack-tripleo-heat-templates/roles_data.yaml` file to a private location

command:

```
cp /usr/share/openstack-tripleo-heat-templates/roles_data.yaml  
/home/stack/templates/aci_roles_data.yaml
```

# Overcloud installation

- Step 2

Edit the local copy of roles\_data.yaml(aci\_roles\_data.yaml)

- Under the controller role, add the following lines:
  - OS::TripleO::Services::CiscoAciAIM
  - OS::TripleO::Services::CiscoAciLldp
  - OS::TripleO::Services::CiscoAciOpflexAgent
- Under the compute role, add the following line:
  - OS::TripleO::Services::CiscoAciLldp
  - OS::TripleO::Services::CiscoAciOpflexAgent
- Note:  
From Cisco ACI Release 5.2(1), [CiscoAciOpflexAgent](#) service is supported. If you are deploying a release prior to 5.2(1), don't add [CiscoAciOpflexAgent](#) service

# Overcloud installation

- Step 3

## Declare resources for ACI environment

- Define Cisco ACI resources in a .yaml template file to include with deployment.  
For example, /home/stack/templates/ciscoaci-env.yaml.
- Run following command to create ciscoaci-env.yaml file.  
`sudo vi /home/stack/templates/ciscoaci-env.yaml`
- Copy an example of a full resources declaration from section "Example of Resources Declaration" in the appendix of this guide.

[https://www.cisco.com/c/en/us/td/docs/dcn/aci/openstack/installation-guide/OSP-16-2/aci-installation-guide-openstack-osp-16-2/m-reference-information.html#Cisco\\_Reference.dita\\_15dc6db6-b0ab-4aab-bd6b-3554acd88491](https://www.cisco.com/c/en/us/td/docs/dcn/aci/openstack/installation-guide/OSP-16-2/aci-installation-guide-openstack-osp-16-2/m-reference-information.html#Cisco_Reference.dita_15dc6db6-b0ab-4aab-bd6b-3554acd88491)

# Overcloud installation

- Step 3  
Declare resources for ACI environment
  - Note :  
If you are deploying a release prior to Cisco ACI Release 5.2(1),  
you need to make the following changes in the example:
    - Remove the definition for `OS::TripleO::Services::CiscoAciOpflexAgent`.
    - Change the `OS::TripleO::Services::NeutronOvsAgent` and  
`OS::TripleO::Services::ComputeNeutronOvsAgent` to reference the `/opt/ciscoaci-tripleo-heat-templates/deployment/opflex/opflex-agent-container-puppet.yaml`

# Overcloud installation

- Step 3

## Declare resources for ACI environment

- For ACI Release 5.2(1) or later with opflex([CiscoAciOpflexAgent](#))  
Example:

```
resource_registry:
```

```
#controller
OS::TripleO::ControllerExtraConfigPre: /opt/ciscoaci-tripleo-heat-templates/nodepre.yaml
OS::TripleO::Services::NeutronOvsAgent: /opt/ciscoaci-tripleo-heat-templates/deployment/neutron_opflex/neutron-opflex-agent-container-puppet.yaml
OS::TripleO::Docker::NeutronML2PluginBase: /opt/ciscoaci-tripleo-heat-templates/deployment/neutron/neutron-ml2-ciscoaci.yaml
OS::TripleO::Services::CiscoAciAIM: /opt/ciscoaci-tripleo-heat-templates/deployment/acaim/cisco-acaim-container-puppet.yaml
OS::TripleO::Services::NeutronMetadataAgent: /usr/share/openstack-tripleo-heat-templates/deployment/neutron/neutron-metadata-container-puppet.yaml
OS::TripleO::Services::NeutronDhcpAgent: /usr/share/openstack-tripleo-heat-templates/deployment/neutron/neutron-dhcp-container-puppet.yaml

#compute
OS::TripleO::ComputeExtraConfigPre: /opt/ciscoaci-tripleo-heat-templates/nodepre.yaml
OS::TripleO::Services::ComputeNeutronOvsAgent: /opt/ciscoaci-tripleo-heat-templates/deployment/neutron_opflex/neutron-opflex-agent-container-puppet.yaml
OS::TripleO::Services::ComputeNeutronMetadataAgent: /opt/ciscoaci-tripleo-heat-templates/deployment/compute_neutron_metadata/compute-neutron-metadata.yaml
OS::TripleO::Services::CiscoAciLldp: /opt/ciscoaci-tripleo-heat-templates/deployment/lldp/cisco_lldp.yaml
OS::TripleO::Services::CiscoAciOpflexAgent: /opt/ciscoaci-tripleo-heat-templates/deployment/opflex/opflex-agent-container-puppet.yaml
OS::TripleO::Services::OVNDBs: OS::Heat::None
OS::TripleO::Services::OVNController: OS::Heat::None
OS::TripleO::Services::OVNMetadataAgent: OS::Heat::None
OS::TripleO::Services::ComputeNeutronL3Agent: OS::Heat::None
OS::TripleO::Services::NeutronL3Agent: OS::Heat::None
```

# Overcloud installation

- Step 3  
Declare resources for ACI environment
  - For prior to ACI Release 5.2(1) with non-opflex([neutron-openvswitch-agent](#))  
Example:

resource\_registry:

```
#controller
OS::TripleO::ControllerExtraConfigPre: /opt/ciscoaci-tripleo-heat-templates/nodepre.yaml
OS::TripleO::Services::NeutronOvsAgent: /opt/ciscoaci-tripleo-heat-templates/deployment/opflex/opflex-agent-container-puppet.yaml
OS::TripleO::Docker::NeutronML2PluginBase: /opt/ciscoaci-tripleo-heat-templates/deployment/neutron/neutron-ml2-ciscoaci.yaml
OS::TripleO::Services::CiscoAciAIM: /opt/ciscoaci-tripleo-heat-templates/deployment/aciam/cisco-aciam-container-puppet.yaml
OS::TripleO::Services::NeutronMetadataAgent: /usr/share/openstack-tripleo-heat-templates/deployment/neutron/neutron-metadata-container-puppet.yaml
OS::TripleO::Services::NeutronDhcpAgent: /usr/share/openstack-tripleo-heat-templates/deployment/neutron/neutron-dhcp-container-puppet.yaml

#compute
OS::TripleO::ComputeExtraConfigPre: /opt/ciscoaci-tripleo-heat-templates/nodepre.yaml
OS::TripleO::Services::ComputeNeutronOvsAgent: /opt/ciscoaci-tripleo-heat-templates/deployment/opflex/opflex-agent-container-puppet.yaml
OS::TripleO::Services::ComputeNeutronMetadataAgent: /opt/ciscoaci-tripleo-heat-templates/deployment/compute_neutron_metadata/compute-neutron-metadata.yaml
OS::TripleO::Services::CiscoAciLldp: /opt/ciscoaci-tripleo-heat-templates/deployment/lldp/cisco_lldp.yaml
OS::TripleO::Services::OVNDBs: OS::Heat::None
OS::TripleO::Services::OVNController: OS::Heat::None
OS::TripleO::Services::OVNMetadataAgent: OS::Heat::None
OS::TripleO::Services::ComputeNeutronL3Agent: OS::Heat::None
OS::TripleO::Services::NeutronL3Agent: OS::Heat::None
```

Note:

[OS::TripleO::Services::CiscoAciOpflexAgent: /opt/ciscoaci-tripleo-heat-templates/deployment/opflex/opflex-agent-container-puppet.yaml](#) is removed under #compute.

# Overcloud installation

- Step 3  
Declare resources for ACI environment

- Example of “parameter\_defaults” in [ciscoaci-env.yaml](#) :

parameter\_defaults:

```
NeutronSfcDriver: 'aim'  
NeutronFcDriver: 'aim'  
NeutronCorePlugin: 'ml2plus'  
NeutronServicePlugins: 'group_policy,ncp,apic_aim_l3'  
NeutronPluginML2PuppetTags: 'neutron_plugin_ml2,neutron_plugin_cisco_aci'  
NeutronEnableIsolatedMetadata: true  
EnablePackageInstall: true  
ACIYumRepo: http://10.10.250.67:8787/v2/\_acirepo  
ACIApicHosts: 10.105.1.10  
ACIApicUsername: admin  
ACIApicPassword: password  
ACIApicSystemId: osp16.2  
ACIUseLLDPDiscovery: 'true'  
ACIApicEntityProfile: OSP16.2  
ACIApicInfraVlan: 4093  
ACIApicInfraSubnetGateway: 10.0.0.30  
ACIApicInfraAnycastAddr: 10.0.0.32  
ACIOpflexUplinkInterface: ens8  
ACIOpflexEncapMode: vxlan  
ACIOpflexVlanRange: 1200:1300  
ACIYumRepoMetadataExpiry: 90  
DockerInsecureRegistryAddress: ["director16.2.ctlplane.localdomain:8787", "10.10.250.67:8787"]
```

# Overcloud installation

- Step 3  
Declare resources for ACI environment
  - Explanation about some parameters

ACIYumRepo: http://10.10.250.67:8787 /v2/\_\_acirepo

--- http://director\_ctlplane\_ip/v2/\_\_acirepo

ACIApicHosts: 10.105.1.10

---apic oob ip

ACIApicUsername: admin

---apic admin id or userid which has admin privilege

ACIApicPassword: password

---apic admin pwd or user pwd which has admin privilege

ACIApicSystemId: osp16.2

---openstack vmm domain\_name which will be created automatically after overcloud deploy

ACIUseLLDPDiscovery: 'true'

---ACI AAEP profile name which is created in ACI preparation steps

ACIApicEntityProfile: OSP16.2

---can check it in apic's /data/data\_admin/sam\_exported.config

ACIApicInfraVlan: 4093

---can check it in apic's peer leaf's SVI ip via 'show ip interface vrf overlay-1'

ACIApicInfraSubnetGateway: 10.0.0.30

---can check it in apic's peer leaf's Lo1023 ip via 'show ip interface vrf overlay-1'

ACIApicInfraAnycastAddr: 10.0.0.32

--- vlan scope which is defined in aci vlan\_pool for osp in ACI preparation steps

ACIOflexUplinkInterface: ens8

--- FQDN format is director\_hostname.ctlplane.overcloud\_domain\_name:8787

ACIOflexEncapMode: vxlan

overcloud\_domain\_name is defined in /home/stack/undercloud.conf during undercloud deployment steps.

ACIOflexVlanRange: 1200:1300

ACIYumRepoMetadataExpiry: 90

DockerInsecureRegistryAddress: ["director16.2.ctlplane.localdomain:8787", "10.10.250.67:8787 "]

--- Cisco Live!

# Overcloud installation

- Step 4(optional)

To use Cisco ACI certificate-based authentication, create a local user with an X.509 certificate and specify the certificate and key in the `ciscoaci_env.yaml` file using the parameters `ACIApicPrivateKey` and `ACIApicCertName`.

- See the section "Creating a Local User and Adding a User Certificate" in [https://www.cisco.com/c/en/us/td/docs/dcn/aci/apic/5x/security-configuration/cisco-apic-security-configuration-guide-release-51x/m\\_access\\_authentication\\_and\\_accounting.html#task\\_215D252F7EAC44C48114A89B81639587](https://www.cisco.com/c/en/us/td/docs/dcn/aci/apic/5x/security-configuration/cisco-apic-security-configuration-guide-release-51x/m_access_authentication_and_accounting.html#task_215D252F7EAC44C48114A89B81639587)

- Note :

When you use certificate-based authentication, make sure that you do not specify the parameter `ACIApicPassword` in the `ciscoaci_env.yaml` file.

# Overcloud installation

- Step 5

Deploy Overcloud.

- Include the custom roles data file ([aci\\_roles\\_data.yaml](#)) created using the -r option.
- Include the Cisco ACI environment file([ciscoaci-env.yaml](#)) and Cisco ACI containers YAML file([ciscoaci\\_containers.yaml](#)) in the environment list using the -e option
- Include site-specific environment files which are created or custom-defined by following the Red Hat guidelines for the creation of custom templates and autogeneration of the network environment template.

# Overcloud installation

- Step 5  
Deploy Overcloud.

- Example :

```
openstack overcloud deploy --templates /home/stack/tripleo-heat-templates
-r /home/stack/templates/aci_roles_data.yaml
-e /home/stack/templates/ciscoaci_containers.yaml
-e /home/stack/templates/ciscoaci-env.yaml
-e /home/stack/templates/rhel-registration-resource-registry.yaml
-e /home/stack/templates/environment-rhel-registration
-e /home/stack/tripleo-heat-templates/environments/network-isolation.yaml
-e /home/stack/templates/overcloud_images.yaml
-e /home/stack/templates/network-environment.yaml
```

# Overcloud installation

- Step 5  
Deploy Overcloud.
  - About other parameters which are required, please refer to link below

<https://www.cisco.com/c/en/us/td/docs/dcn/aci/openstack/installation-guide/OSP-16-2/aci-installation-guide-openstack-osp-16-2/m-reference-information.html>

## Parameters for the Cisco ACI Environment

The following table provides information about parameters that are required to configure the Cisco Application Centric Infrastructure (ACI) environment.

Parameter	Details
NeutronCorePlugin	<ul style="list-style-type: none"><li>• <b>Value:</b> 'ml2plus'</li><li>• <b>Default:</b> None</li><li>• <b>Mandatory or Optional:</b> Mandatory</li><li>• <b>Comments:</b> None</li></ul>
NeutronServicePlugins	<ul style="list-style-type: none"><li>• <b>Value:</b> 'group_policy,ncp,apic_aim_l3'</li><li>• <b>Default:</b> None</li><li>• <b>Mandatory or Optional:</b> Mandatory</li><li>• <b>Comments:</b> None</li></ul>

# Demo

# Demo

- Note:
  - Demo is only for reference of how to install aci plug-in and configure aci resources files.  
Please read and follow official guide according to specific requirements for the real production environment
- Demo Environment :

ACI fabric 4.2(7s)

OSP 16.2(RH8.4)

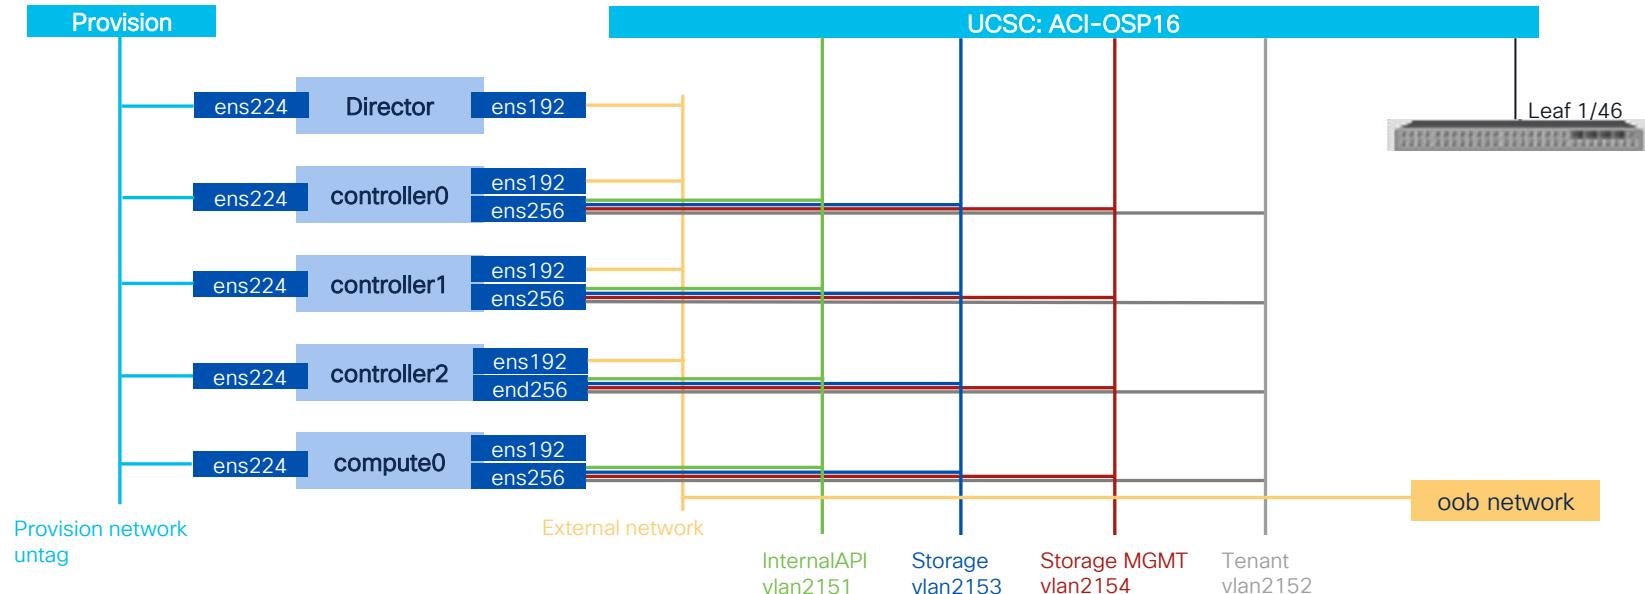

3+1(3 Controller nodes and 1 compute nodes)

Recommended plugin: 5.2(7.20230127)

<https://www.cisco.com/c/dam/en/us/td/docs/Website/datacenter/aci/virtualization/matrix/virtmatrix.html>

# Demo

- OSP infra network design in Demo:  
provision network and external network have specific NICs in UCSC  
These traffics will not pass through ACI fabric

# Demo

- Install aci plug-in

```
sudo yum -y localinstall --nogpgcheck tripleo-ciscoaci-16.1-1232.noarch.rpm
```

```
[undercloud) [stack@ciscolive-osp-director ~]$ sudo yum -y localinstall --nogpgcheck tripleo-ciscoaci-16.1-1232.noarch.rpm
Updating Subscription Management repositories.

```

Note: Demo ACI OS is 4.2.7s, prior to 5.2.(1), so don't add - OS::TripleO::Services::CiscoAciOpflexAgent

# Demo

- Create ciscoaci\_env.yaml manually.  
`sudo vi /home/stack/templates/ciscoaci-env.yaml`
- Copy an example of a full resources declaration from section "Example of Resources Declaration" in the appendix of this guide.

[https://www.cisco.com/c/en/us/td/docs/dcn/aci/openstack/installation-guide/OSP-16-2/aci-installation-guide-openstack-osp-16-2/m-reference-information.html#Cisco\\_Reference.dita\\_15dc6db6-b0ab-4aab-bd6b-3554acd88491](https://www.cisco.com/c/en/us/td/docs/dcn/aci/openstack/installation-guide/OSP-16-2/aci-installation-guide-openstack-osp-16-2/m-reference-information.html#Cisco_Reference.dita_15dc6db6-b0ab-4aab-bd6b-3554acd88491)

# Demo

- As per guide , prior to Cisco ACI Release 5.2(1)
  - Remove the definition for OS::TripleO::Services::CiscoAciOpflexAgent.
  - Change the OS::TripleO::Services::NeutronOvsAgent and OS::TripleO::Services::ComputeNeutronOvsAgent to reference the /opt/ciscoaci-tripleo-heat-templates/deployment/opflex/opflex-agent-container-puppet.yaml

```
#!/home/stack/templates/ciscoaci-env.yaml
# A Heat environment file which can be used to enable a
# a Neutron Cisco Aci backend on the controller, configured via puppet
resource_registry:

  #controller
  OS::TripleO::ControllerExtraConfigPre: /opt/ciscoaci-tripleo-heat-templates/nodepre.yaml
  OS::TripleO::Services::NeutronOvsAgent: /opt/ciscoaci-tripleo-heat-templates/deployment/opflex/opflex-agent-container-puppet.yaml
  OS::TripleO::Docker::NeutronML2PluginBase: /opt/ciscoaci-tripleo-heat-templates/deployment/neutron/neutron-ml2-ciscoaci.yaml
  OS::TripleO::Services::CiscoAciAIM: /opt/ciscoaci-tripleo-heat-templates/deployment/acaim/cisco-acaim-container-puppet.yaml
  OS::TripleO::Services::NeutronMetadataAgent: /usr/share/openstack-tripleo-heat-templates/deployment/neutron/neutron-metadata-container-puppet.yaml
  OS::TripleO::Services::NeutronDhcpAgent: /usr/share/openstack-tripleo-heat-templates/deployment/neutron/neutron-dhcp-container-puppet.yaml
  #compute
  OS::TripleO::ComputeExtraConfigPre: /opt/ciscoaci-tripleo-heat-templates/nodepre.yaml

# Demo

- ACI related yaml files have been prepared.
- OSP template yaml files have been prepared following RedHat guide.
- Run Overcloud deploy :

```
(undercloud) [stack@ciscolive-osp-director ~]$ openstack overcloud deploy --templates  
/home/stack/openstack-tripleo-heat-templates-rendered \  
> -r /home/stack/templates/aci_roles_data.yaml \  
> -e /home/stack/templates/ciscoaci-env.yaml \  
> -e /home/stack/templates/ciscoaci_containers.yaml \  
> -e /home/stack/templates/node-info.yaml \  
> -n /home/stack/network_data.yaml \  
> -e /home/stack/openstack-tripleo-heat-templates-rendered/environments/network-isolation.yaml \  
> -e /home/stack/openstack-tripleo-heat-templates-rendered/environments/network-environment.yaml \  
> -e /home/stack/openstack-tripleo-heat-templates-rendered/environments/net-bond-with-vlans.yaml \  
> -e /home/stack/containers-prepare-parameter.yaml \  
> --ntp-server 192.168.14.1 | tee openstack-deployment.log
```

# Demo

- Deploy success

```
2023-03-16 16:44:57.713790 | ~~~~~ End Summary Information ~~~~~
Ansible passed.Overcloud configuration completed.
Overcloud Endpoint: http://10.124.145.162:5000
Overcloud Horizon Dashboard URL: http://10.124.145.162:80/dashboard
Overcloud rc file: /home/stack/overcloudrc
Overcloud Deployed without error
(undercloud) [stack@KR-OSP-director ~]$
```

```
(undercloud) [stack@KR-OSP-director ~]$ openstack server list
+-----+-----+-----+-----+-----+

+-----+-----+-----+-----+-----+
(undercloud) [stack@KR-OSP-director ~]$ █
```

# Demo

- Verify :

Access osp dashboard with ID admin:

<http://10.124.145.162:80/dashboard>

Default admin pwd can be found in below file  
</home/stack/overcloudrc>

```
export OS_AUTH_TYPE=password
export OS_PASSWORD=Nj0ISfjXXXXXXXXXXXXVyoqT ←
```

# Demo

- Create an OSP project ,network ,router etc and correlate them in dashboard or via cli.
- Then will see openstack vmm domain has been pushed to ACI.

The screenshot shows the Cisco ACI Dashboard interface. The top navigation bar includes tabs for System, Tenants, Fabric, Virtual Networking (which is selected and highlighted in blue), L4-L7 Services, Admin, Operations, Apps, and Integrations. Below the navigation is a dark blue header bar with the title "Inventory". The main content area is divided into two panes. The left pane, titled "Inventory", lists various domains under "VMM Domains": Microsoft, OpenStack, KR-OSP16.2-ACI (which is expanded and highlighted with a red box), Red Hat, VMware, and Container Domains. The right pane displays the properties of the selected "KR-OSP16.2-ACI" domain. The title bar for this pane says "Domain - KR-OSP16.2-ACI". It features tabs for Policy (selected) and Operational, and sub-tabs for General, Faults, and History. The "Properties" section shows the domain's name as "KR-OSP16.2-ACI", its virtual switch as "Open vSwitch", and its associated attachable entity profile as "AEP\_OSP". It also specifies "Encapsulation: VXLAN mode" and "Fabric-Wide Multicast Address: 225.1.2.3". A note states "Must Use a Multicast Address different from the Pool of Multicast Addresses." The "Pool of Multicast Addresses (one per-EPG):" field contains "KR-OSP16.2-ACI\_mcast\_1".

# Demo

- Tenant, EPG, BD, subnet etc have been created automatically in ACI.

The screenshot shows the Cisco ACI Tenant Management interface. The top navigation bar includes tabs for System, Tenants (selected), Fabric, Virtual Networking, L4-L7 Services, Admin, Operations, Apps, and Integrations. A search bar at the top right contains the text "name or descr common prj\_0c697d79aba04bb7afe2e01e9317b695".

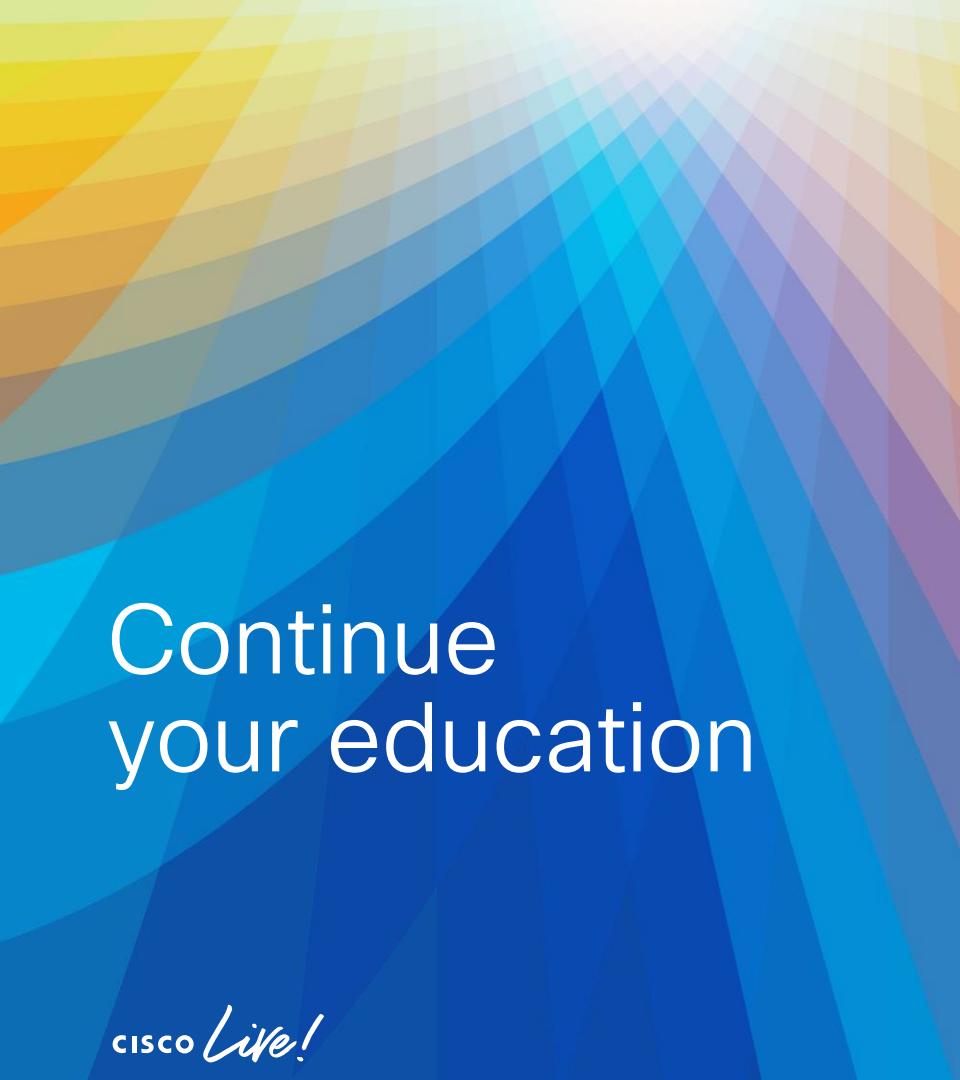

The left sidebar displays the tenant structure:

- ALL TENANTS
- Add Tenant
- Tenant Search:
