

Mastering the Upgrade to CUCM Version 15: Innovations, Troubleshooting, and Seamless Transition

cisco Live !

Edgar Rodriguez Aguilar
Technical Consulting Engineer
edgrodri@cisco.com

Reference Sessions

2025:

- Cisco Unified Communications Manager (CUCM) Platform Update for On Premise Calling and Webex Calling Dedicated Instance (DI) - [BRKCOL-2076](#)

Previous Cisco Live sessions:

- Upgrade to Cisco Unified Communications Manager Release 15 with Confidence! - [BRKCOL-2076](#) (Las Vegas 2024)
- Best Practices for Migrating From Previous Versions of Cisco Unified Communications Manager (CUCM) to Version 12.5 - [BRKUCC-2011](#) (Barcelona 2020)

Cisco Webex App

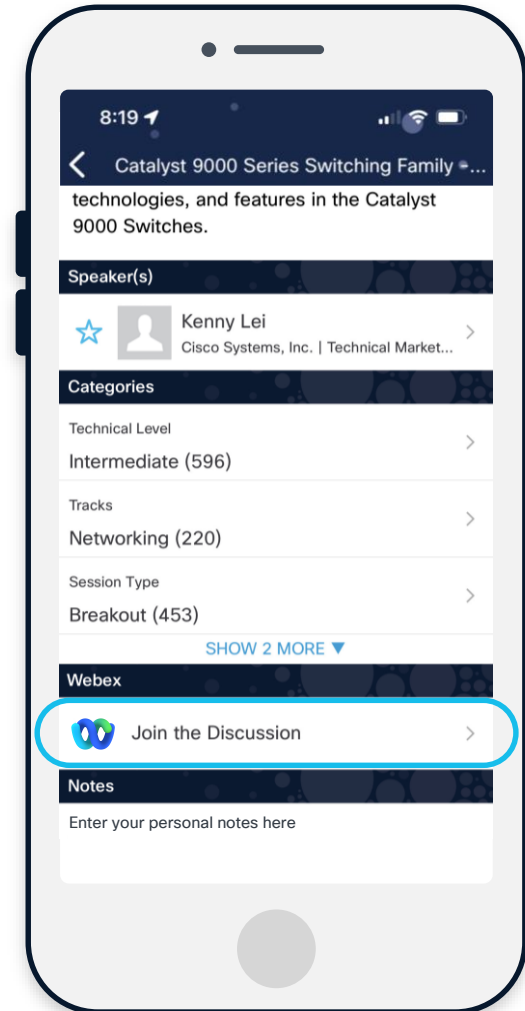

Questions?

Use Cisco Webex App to chat with the speaker after the session

How

- 1 Find this session in the Cisco Live Mobile App
- 2 Click “Join the Discussion”
- 3 Install the Webex App or go directly to the Webex space
- 4 Enter messages/questions in the Webex space

Webex spaces will be moderated by the speaker until June 13, 2025.

Agenda

- 01 Why Upgrade?
- 02 Upgrade Methods
- 03 Simple Upgrade
- 04 Fresh Install with Data Import
- 05 General Recommendations
- 06 General Troubleshooting
- 07 Solving Common Issues
- 08 Key Takeaways

**In the middle of difficulty lies
opportunity**

Albert Einstein
Theoretical Physicist

Why Upgrade?

CUCM EOL Announcement and EOS Timeline

EOL/EOS Notices and Release Selection

Milestone	Potential Activity	Summary
Before End-of-Sales Date	Ability to deploy new cluster	
After End-of-Sales Date	Start planning for upgrades	 1 year
End of SW Maintenance	Desire to complete the upgrade	

Upgrade Planning:

- Consistent release cycles
- Predictable End-of-Sales/Support milestones durations

End-of-Sales and End-of-Life Products

<https://www.cisco.com/c/en/us/products/eos-eol-listing.html>

Files for CUCM Version 15

Functionality	File Name
Upgrade Readiness COP file to run post upgrade tests	ciscocm.postUpgradeCheck-00045.k4.cop.sha512
Upgrade Readiness COP file to run pre upgrade tests	ciscocm.preUpgradeCheck-00045.k4.cop.sha512
The Cisco Free Common Space COP file can be used to free up space when the upgrade runs out of space	ciscocm.free_common_space_v1.11.k4.cop.sha512
Recovery Software	15.0.1.10000-32-recovery.iso
Prime Collab Deployment (PCD) non-bootable	PCD_UCOS_15.0.1.12900-47.sha512.iso
CUCM 15 SU2 non-bootable	UCSInstall_UCOS_15.0.1.12900-234.sha512.iso
Virtual Server Template (OVA file)	cucm_15.0_vmv17_v1.2.sha512.ova

Migration to Alma Linux 8 and 64-bit

Alma Linux as OS

010110
110010
001011

64-Bit System

Open-VMTools

Additional Considerations

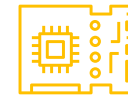

Direct Upgrade from 10.5/11.5/12.0 to 15 are not supported

Upgrades from 10.5/11.5/12.0 require a staged upgrade to 12.5/14 and then to 15, or a Direct Migration

Upgrades from 12.5/14 to 15 require Direct Upgrade and not Refresh Upgrade

The hardware specifications have changed

Direct Upgrade vs Refresh Upgrade

Direct Upgrade

- Active partition is running while software is upgraded on inactive partition
- Low complexity with shortest possible downtime
- Formerly called L2 Upgrade

Refresh Upgrade

- Server is down while upgrade is taking place on inactive partition
- Medium complexity with longer downtime

Virtual Hardware Specifications Changes

CUCM Version 14

Minimum vSphere ESXi: 6.7, 7.0 U1, 8.0 U1 (VM version 13)

	vCPU	Physical CPU Base Frequency	vRAM	vDisk	vNIC
Small Example VM	2	2.00+ GHz	6 GB	1 x 80 GB	1(1GbE+)
Medium Example VM	2	2.50+ GHz	8 GB	1 x 110 GB	1(1GbE+)
Large Example VM	4	2.50+ GHz	8 GB	1 x 110 GB	1(1GbE+)

CUCM Version 15

Minimum vSphere ESXi: 7.0 U3, 8.0 U1 (VM version 17)

	vCPU	Physical CPU Base Frequency	vRAM	vDisk	vNIC
Small Example VM	2	2.00+ GHz	10 GB	1 x 110 GB	1(1GbE+)
Medium Example VM	2	2.50+ GHz	12 GB	1 x 110 GB	1(1GbE+)
Large Example VM	4	2.50+ GHz	14 GB	1 x 110 GB	1(1GbE+)

Shutdown VM:

- Increase vRAM
- Increase vCPUs

Not supported:

- Increasing vDisk requires reinstall

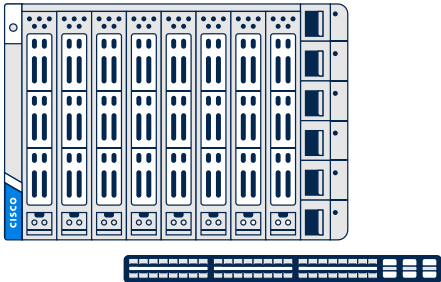

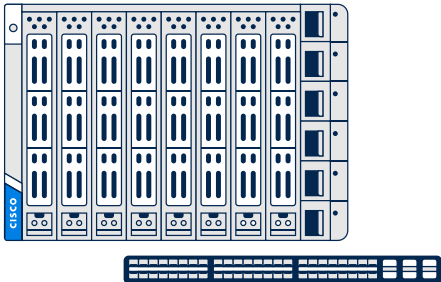

Hardware Considerations

Business Edition 7000H (M5) Example for Large Collaboration		
Spec	Product ID	Qty
BE7000H (M5) Appliance	BE7H-M5-K9	1
Dual Xeon 6132 (2S/14C/2.50 GHz)	Included	
192GB RAM	Included	
RAID Controller (12G)	Included	
Local DAS storage 24x 300GB SAS in quad 6-disk-RAID5 ~1TB usable GB per volume	Included	
2x10GE LoM NIC	Included	
Dual 4x1GbE NIC	Included	
PCIe Riser	Included	
Redundant power supplies	Included	
Rack-mounting kit	Included	

Business Edition 7000H (M6) Example for Large Collaboration		
Spec	Product ID	Qty
BE7000H (M6) Appliance	BE7H-M6-K9	1
Single Xeon 6348 (1S/28C/2.60 GHz)	Included	
192GB RAM	Included	
RAID Controller (12G)	Included	
Local DAS storage 24x 600GB SAS in quad 6-disk-RAID5 ~3TB usable GB per volume	Included	
2x10GE Cu LoM NIC	Included	
Dual 4x10GE Cu NIC	Included	
PCIe Riser	Included	
Redundant power supplies	Included	
Rack-mounting kit	Included	
Trusted Platform Module	Included	

You can only upgrade to vSphere ESXi 8 from 6.7 or higher. **Upgrades from pre-6.7 to 8 are not supported**

UCS Hardware and Software Compatibility Tool

<https://ucshcltool.cloudapps.cisco.com/public/>

OAuth Enhancement

Old

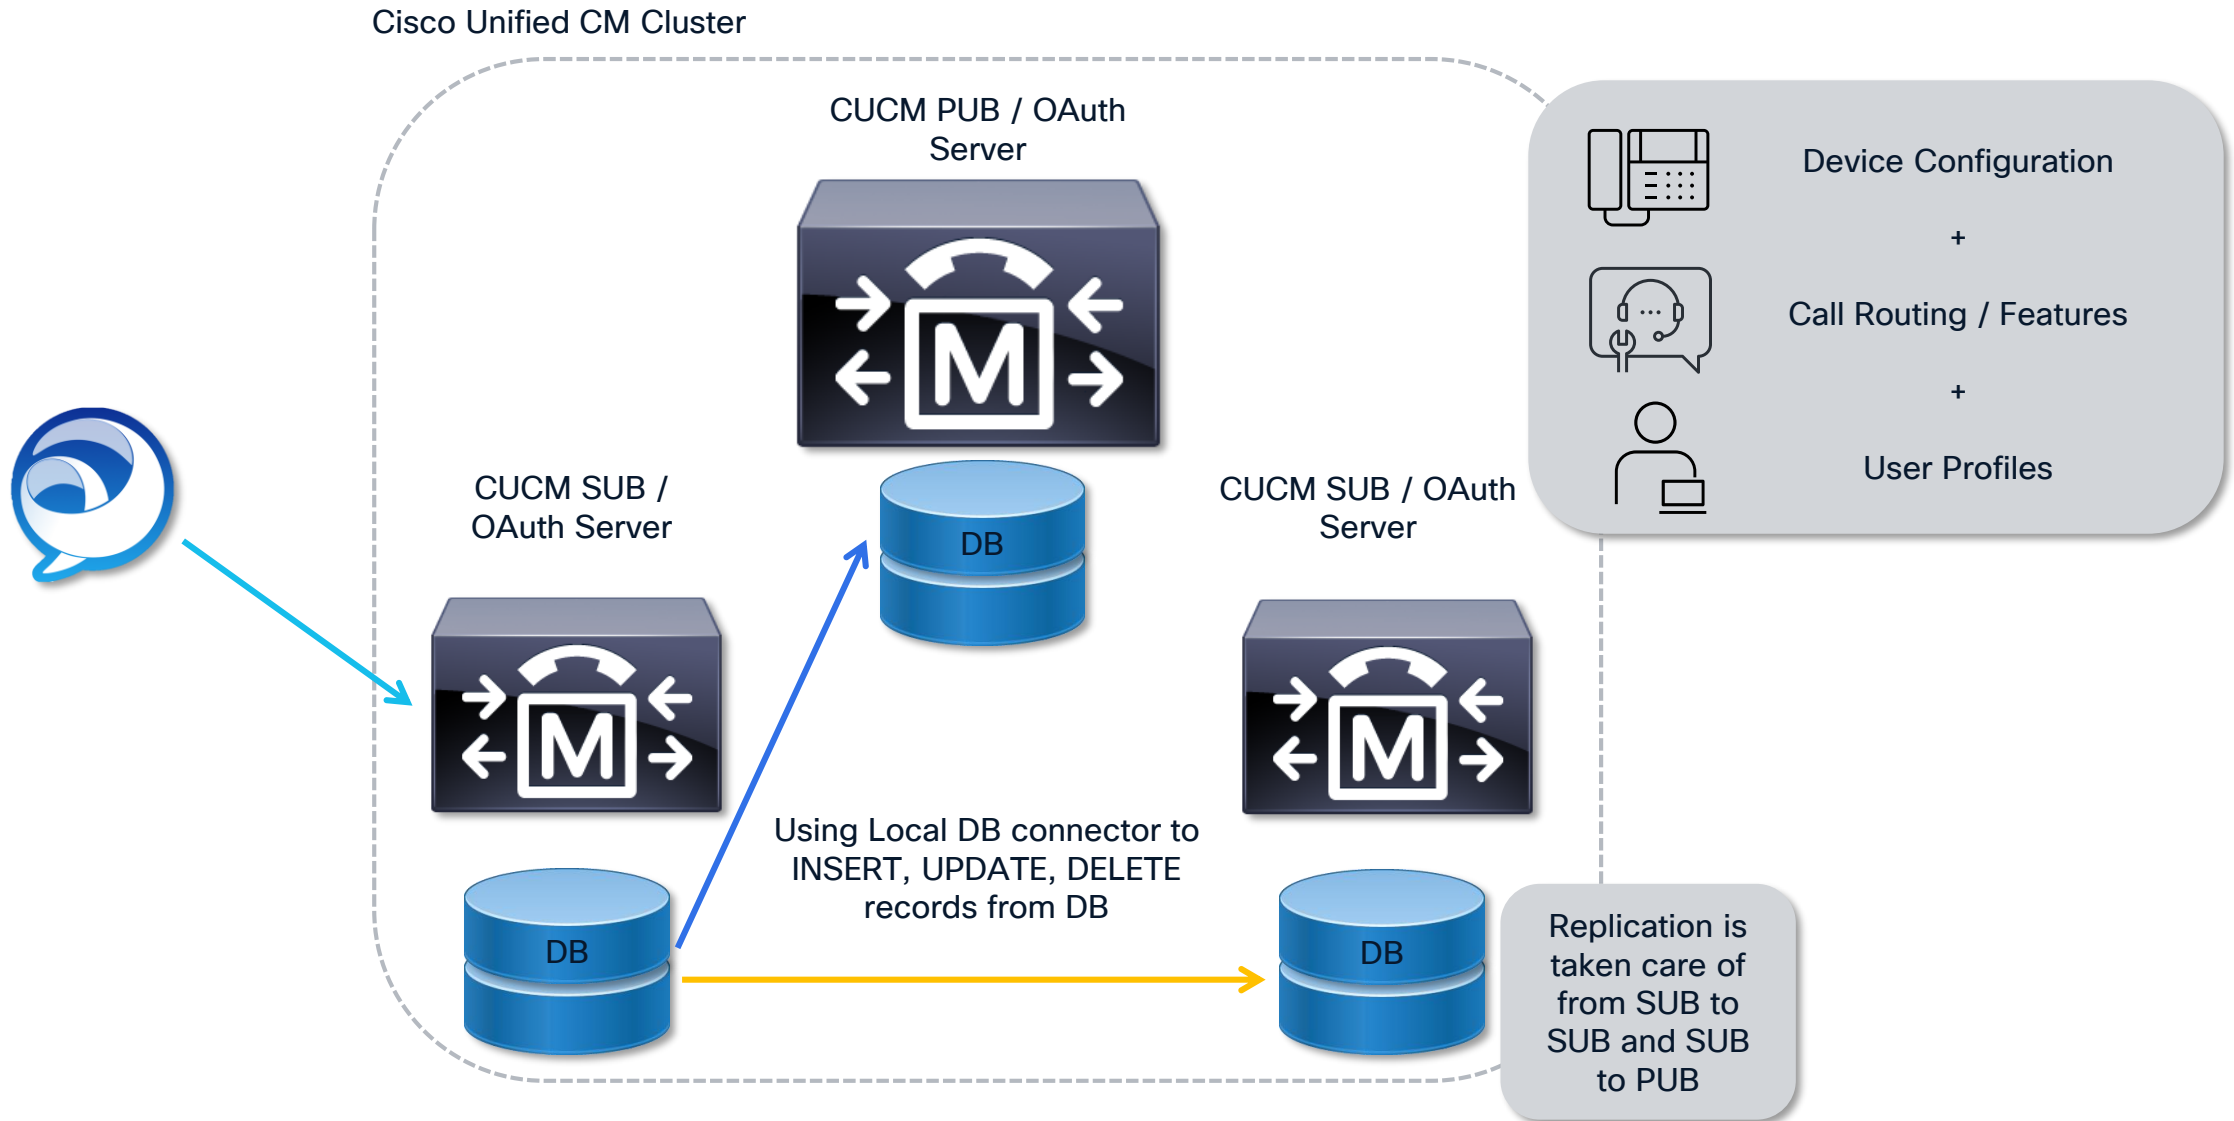

When client attempts to renew the token on CUCM SUB, token MUST be stored in the PUB

New

The OAuth service on SUB will authenticate, authorize, and issue the Access and Refresh tokens

OAuth Enhancement

Support to Renew Refresh Token Automatically

Before

Webex required end users to log in with Single Sign On every 60 days

Before

- End users experienced phone disconnection
- Some users postponed SSO login because they could still use IM and meetings

Now

New parameter called “Auto Renew Refresh Token” has been added, and it is enabled by default

Now

- If enabled, CUCM generates a new Refresh Token if its expiration is <50% of the configured expiry time
- If disabled, CUCM maintains previous behavior

Web Interface Parameters

Cisco Unified CM Administration > System > Enterprise Parameters > SSO and OAuth Configuration

Support for “Smart Transport” (15 SU2)

Cisco Unified CM Administration > System > Licensing

License Management

Status

You are currently Unregistered. To register your system with Cisco Smart Software licensing:

- Ensure your system has access to the internet or a Smart Software Manager satellite installed on your network. This might require you to [edit the Licensing Transport settings](#).
- Login to your smart account in [Smart Software Manager](#) or your Smart Software Manager satellite.
- Navigate to the virtual account containing the licenses to be used by this Product Instance.
- Generate a Product Instance Registration Token(to identify your Smart Account) and copy or save it.
- Return to this page, click the 'Register' button, and use the copied or saved Token to register the product.

TLS 1.3
(Full Handshake)

Upgrade Methods

Direct Standard Upgrade

What

- Upgrade the application software, but not the underlying OS
- Simplest form of upgrade
- OS is the same for both releases

How

- Unified OS Admin
- CLI
- PCD Upgrade task

Example: Upgrades from 12.5 SU2 to 12.5 SU3

Direct Refresh Upgrade

What

- Upgrade both the application software and the underlying OS
- OS is different for both releases

How

- Unified OS Admin
- CLI
- PCD Upgrade task

Example: Refresh Upgrades from 11.5 to 14 

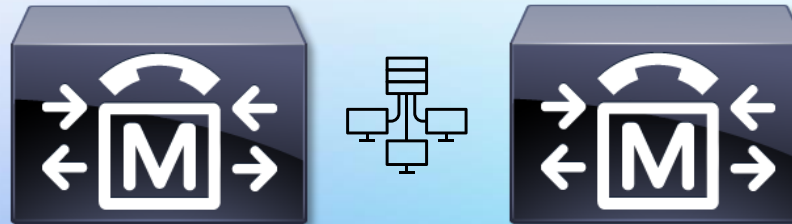

Direct Migration

What

- Involves “repave”
- Site moves
- ESXi Upgrade
- Direct Upgrade path does not exist

How

- PCD Migration
- Fresh Install with Data Import

Example: Upgrades from 10.5 on UCS M3 Hardware to 12.5 on UCS M5 Hardware

Fresh Install with Data Import

What

- An alternative to direct upgrades and direct migrations
- Export the source release's data to SFTP Server
- Import this data during v15 install

How

- CLI is used to complete installation with data import

Example: Any desired upgrade to 15 from 10.5 or higher

Migration from Legacy Releases

What

- Source release is old
- No direct upgrade path
- No direct migration path

How

- The only option is a direct upgrade to a later release that supports either PCD Migration or Install with Data Import

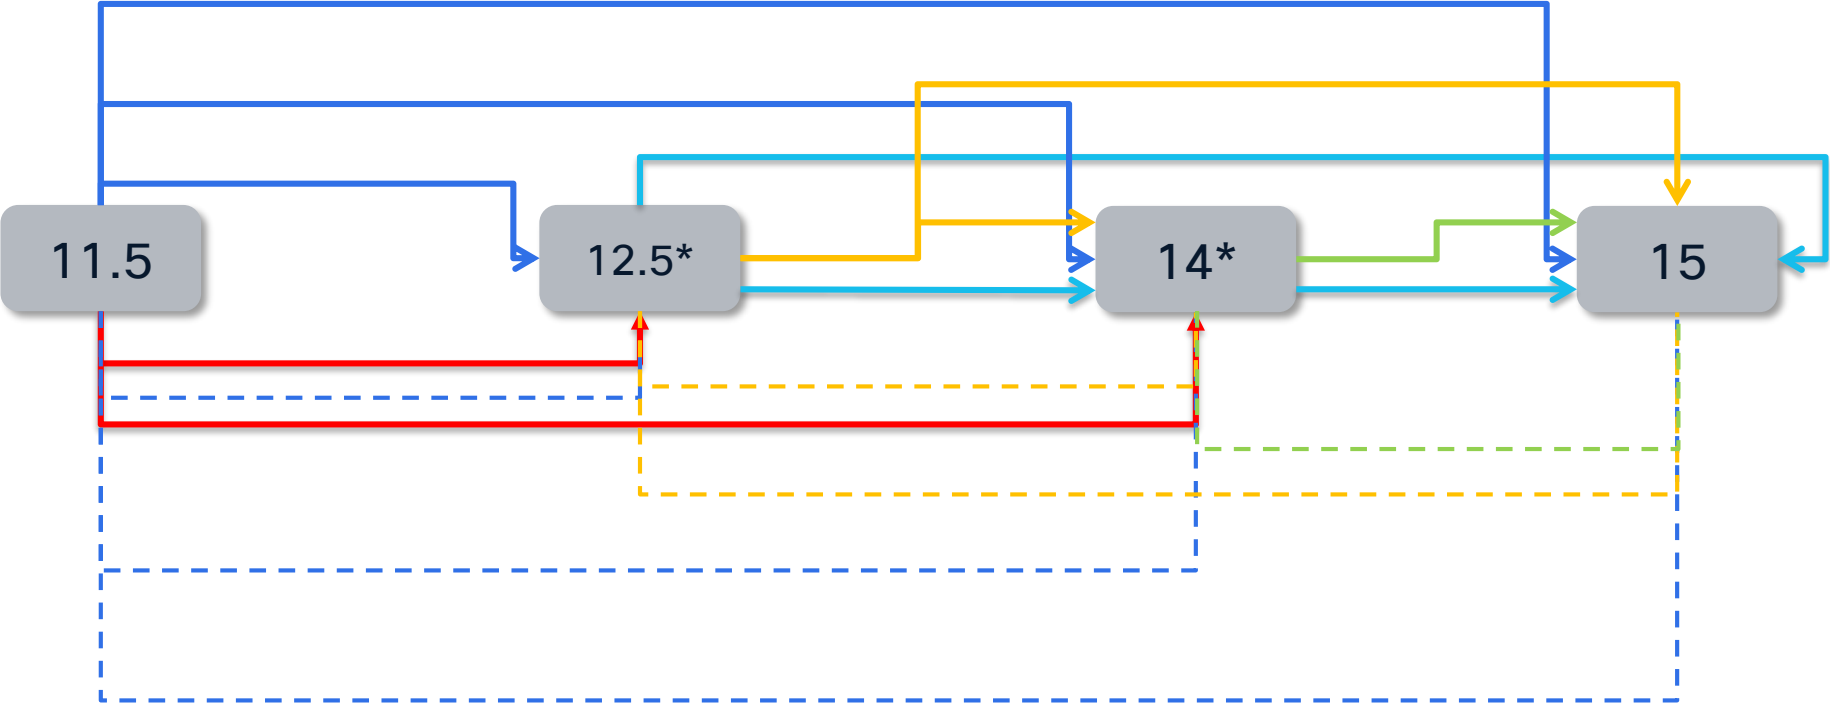

Example: Any desired upgrade to 15 from pre-10.5

Use Simple Upgrade when possible and Fresh Install with Data Import where Simple Upgrade is not possible

Upgrade Paths

→ Direct Refresh Upgrade (RU) 

--- PCD Migration Task (V2V - Virtual to Virtual)

→ Simple Upgrades (Direct Standard Upgrade)
→ Fresh Install with Data Import (V2V)

*If destination 12.5, must be 12.5 SU5+
If destination 14, 14 SU2+ recommended

```
/common/download/scripts/check_os_infrastructure.sh 12.5.1.13900-152
04/16/2025:00:36:16 /common/download/TestManager/tests/TestOSAndInfrastructureChecks.py:58 - INFO - Test result : FAIL. Recommendation :
FAIL: This node was fresh-installed with single 80GB virtual hard disk, which is not supported in release 15.
To resolve the installation or upgrade failure, either
- backup-reinstall-restore your source release in a new virtual machine with 110GB virtual hard disk, then direct upgrade to 15.
Note: Growing from 80GB to 110GB in existing virtual machine will result in upgrade failure to 15, use new virtual machine with 110GB.
- Use a direct migration option to get to 15 (Refer the Upgrade and Migration Guide for Cisco Unified Communications Manager and the IM and Presence Service
on Cisco.com).
WARN: This server has only 4096 MB of vRAM which is lower than the recommended configuration for 2 vCPUs in Cisco Unified Communications Manager release
```

Stopping Service Manager...
/█ Service Manager shutting down services... Please Wait
```

Fresh Install with Data Import

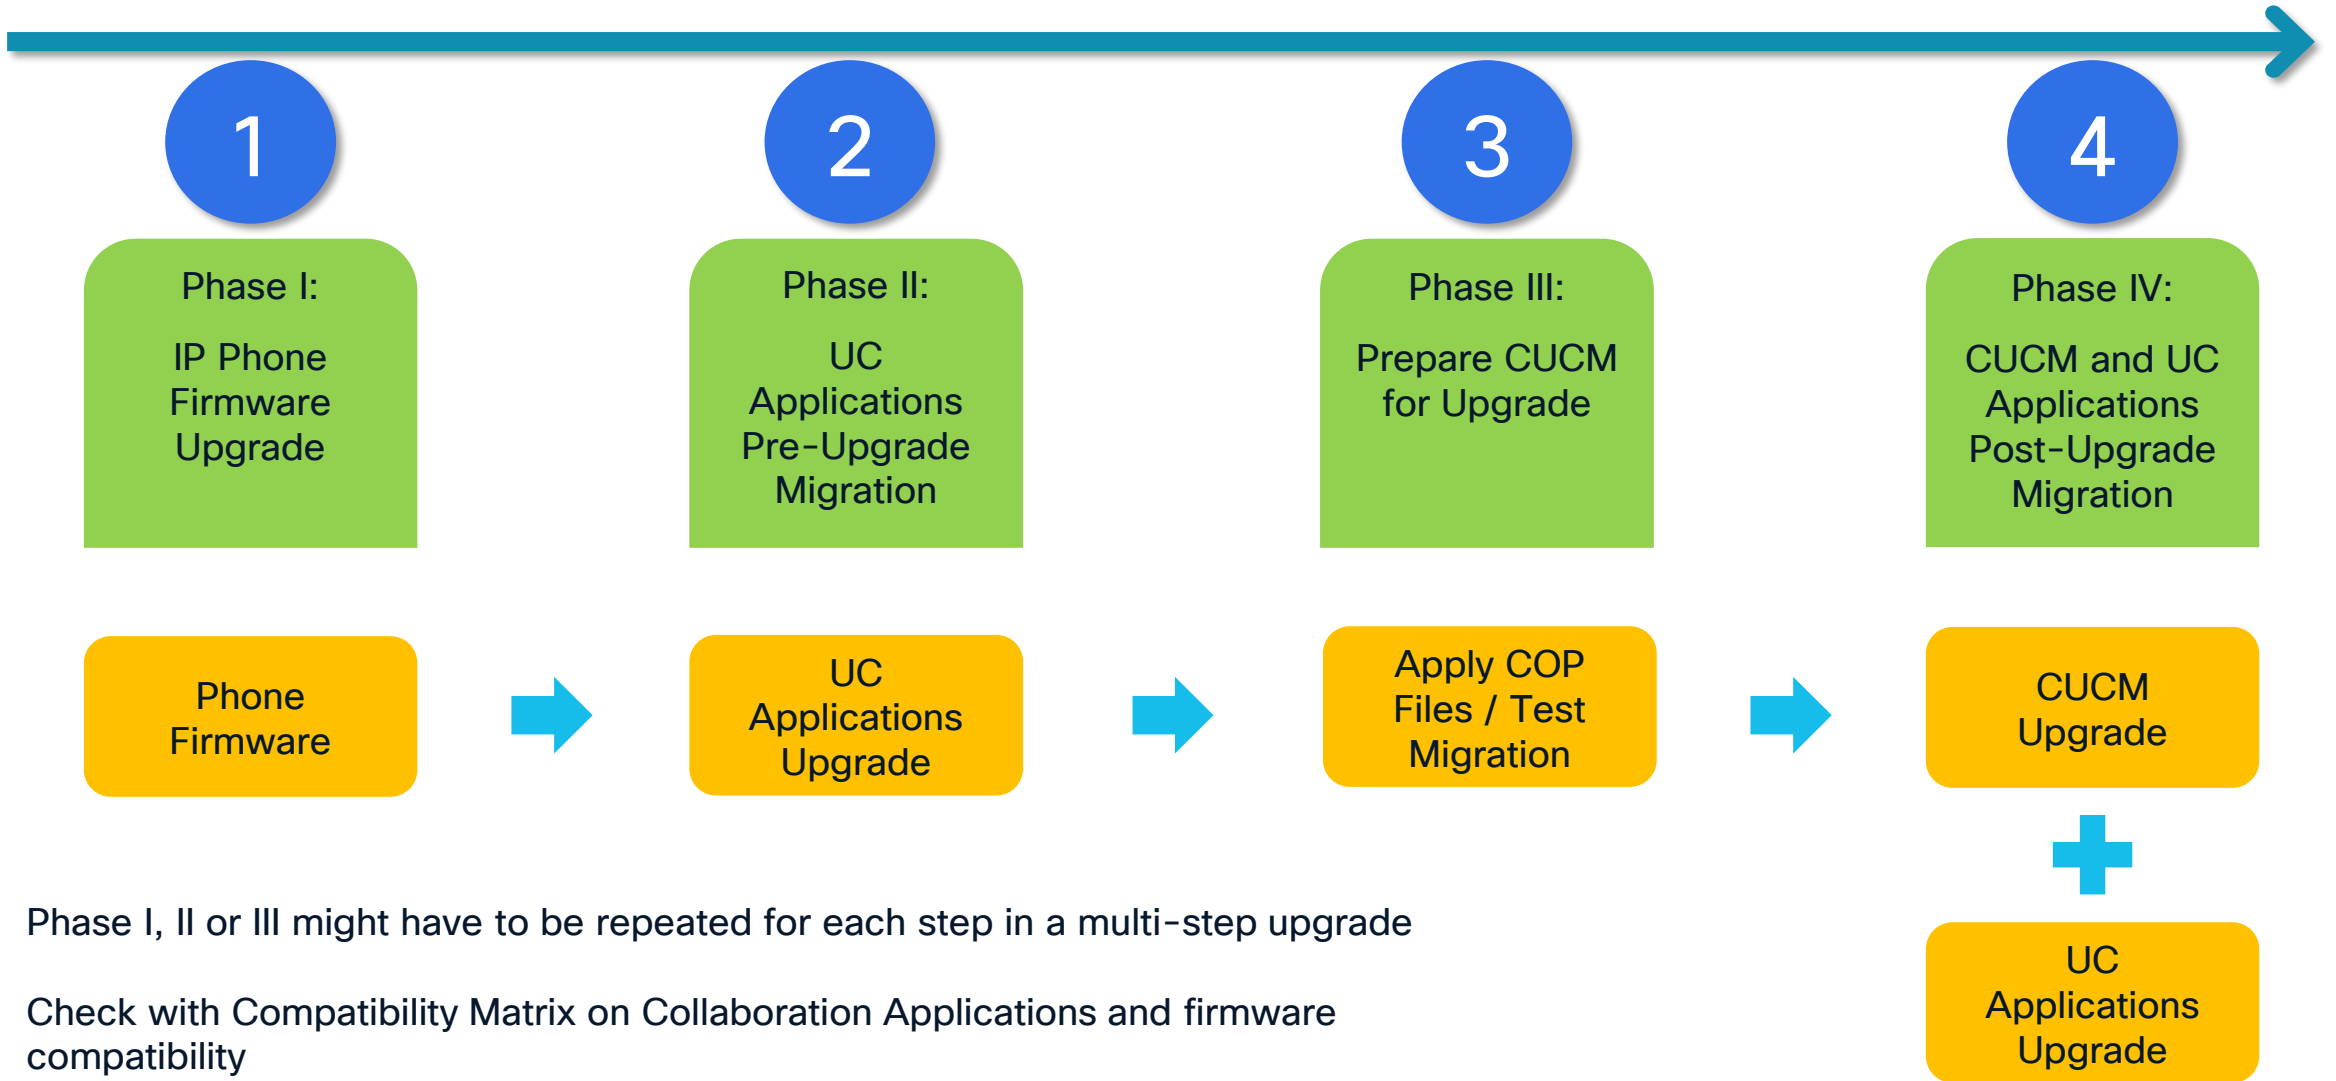

General Recommendations

Minimizing Downtime

- To minimize downtime, **upgrade Publisher** until completion
- Followed by dedicated **MOH/TFTP servers**
- Then, backup Subscribers or **secondary nodes**
- Finally, the **primary Subscriber** servers

Optimizing Upgrade Journey

Improve Upgrade Performance – Phone Firmware

Change **Maximum Serving Count** Cisco Tftp Service Parameter:

- **1,500** for **single-processor** dedicated Tftp server
- **3,000** for **dual-processor** dedicated Tftp server

CM Administration > System > Service Parameters > Cisco Tftp > Advanced

Select Server and Service

Server*

cucmpub12.cucm.net--CUCM Voice/Video (Active) ▼

Service*

Cisco Tftp (Active) ▼

All parameters apply only to the current server except parameters that are in the cluster-wide group(s).

Cisco Tftp (Active) Parameters on server cucmpub12.cucm.net--CUCM Voice/Video (Active)

Parameter Name	Parameter Value
Maximum Serving Count *	1500

Improve Upgrade Performance - IOPS

Check RAID Controller Battery Backup Unit (BBU) status

Make sure Virtual Disk is in “Write Back” Cache mode, NOT in “Write Through”

✓ **Write Back** **Write Through**

CIMC > Menu > Storage > RAID > Virtual Drive Info > Virtual Drive

The screenshot shows the Cisco Integrated Management Controller (CIMC) interface. The breadcrumb navigation path is: CIMC > Menu > Storage > RAID > Virtual Drive Info > Virtual Drive. The page title is "Cisco 12G SAS Modular Raid Controller (SLOT-HBA) / Virtual Drive Info". The "Virtual Drive Info" tab is selected, showing details for virtual drives VD-0 and VD-1. The "General" section for VD-0 is expanded, displaying the following configuration:

Property	Value
Name	RAID1_1234
Strip Size	64 KB
Drives Per Span	4
Span Depth	1
Access Policy	Read-Write
Cache Policy	Direct
Read Ahead Policy	None
Security Capable	No

On the right side of the page, the "Consistency Check Operation Status" is "Not Active". A red box highlights the "Requested Write Cache Policy" and "Current Write Cache Policy" fields, both of which are set to "Write Through". Other fields include "Disk Cache Policy" (Unchanged), "Allow Background Init" (true), "Boot Drive" (true), and "Security Enable" (No).

Improve Upgrade Performance – Database Replication

- Increase database replication parallel processing count (**PUBLISHER**):

```
utils dbreplication setprocess <40>
```

(default is 1)

- Increase database replication timeout for large cluster (**PUBLISHER**):

```
utils dbreplication setrepltimeout <3600>
```

(default is 300)

Server 1-5 = 1 Minute Per Server Servers 6-10 = 2 Minutes Per Server Servers >10 = 3 Minutes Per Server.

Example: 12 Servers in Cluster : Server 1-5 * 1 min = 5 min, + 6-10 * 2 min = 10 min, + 11-12 * 3 min = 6 min, Repltimeout should be set to 21 Minutes.

Troubleshoot CUCM Database Replication Issues:

<https://www.cisco.com/c/en/us/support/docs/unified-communications/unified-communications-manager-callmanager/200396-Steps-to-Troubleshoot-Database-Replicati.html>

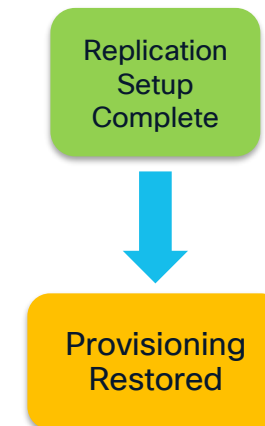

Improve Upgrade Performance – Database Replication

Provisioning options not allowed	Error and warning messages
AXL	503 error response: "Write Operations denied because Cisco UCM or IM and Presence upgrade is in progress"
BAT	Error message: "Upgrade in Progress. Job cannot be started"
LDAP Sync	"Upgrade in progress. Cannot be synced"
Self Care Portal	"WARNING: Add/Update/Delete not allow as a system upgrade is in progress"
CCM Service Activation/Trace	Update failed Add/Update/Delete not allow as a system upgrade is in progress
Phone auto-registration and Self Provisioning	Auto-registration disabled/IVR return error

Provisioning is NOT allowed during post upgrade database replication setup

Emergency option to enable it back via CLI:

```
utils system enableAdministration
```

Additional Recommendations

- **Develop** a comprehensive plan for the migration
- Partners can use PDI Helpdesk for migration plan **review**:
<http://www.cisco.com/web/partners/tools/pdihd.html>
- **Break** the upgrade into phases to minimize downtime
- **Test** your migration in an air-gapped environment
- Open **proactive** TAC case for the upgrade:
<http://cisco.com/tac/caseopen>
- **Check** Unified Communications Virtualization documentation:

https://www.cisco.com/c/dam/en/us/td/docs/voice_ip_comm/uc_system/virtualization/cisco-collaboration-virtualization.html

*** **PLANNING!** ***

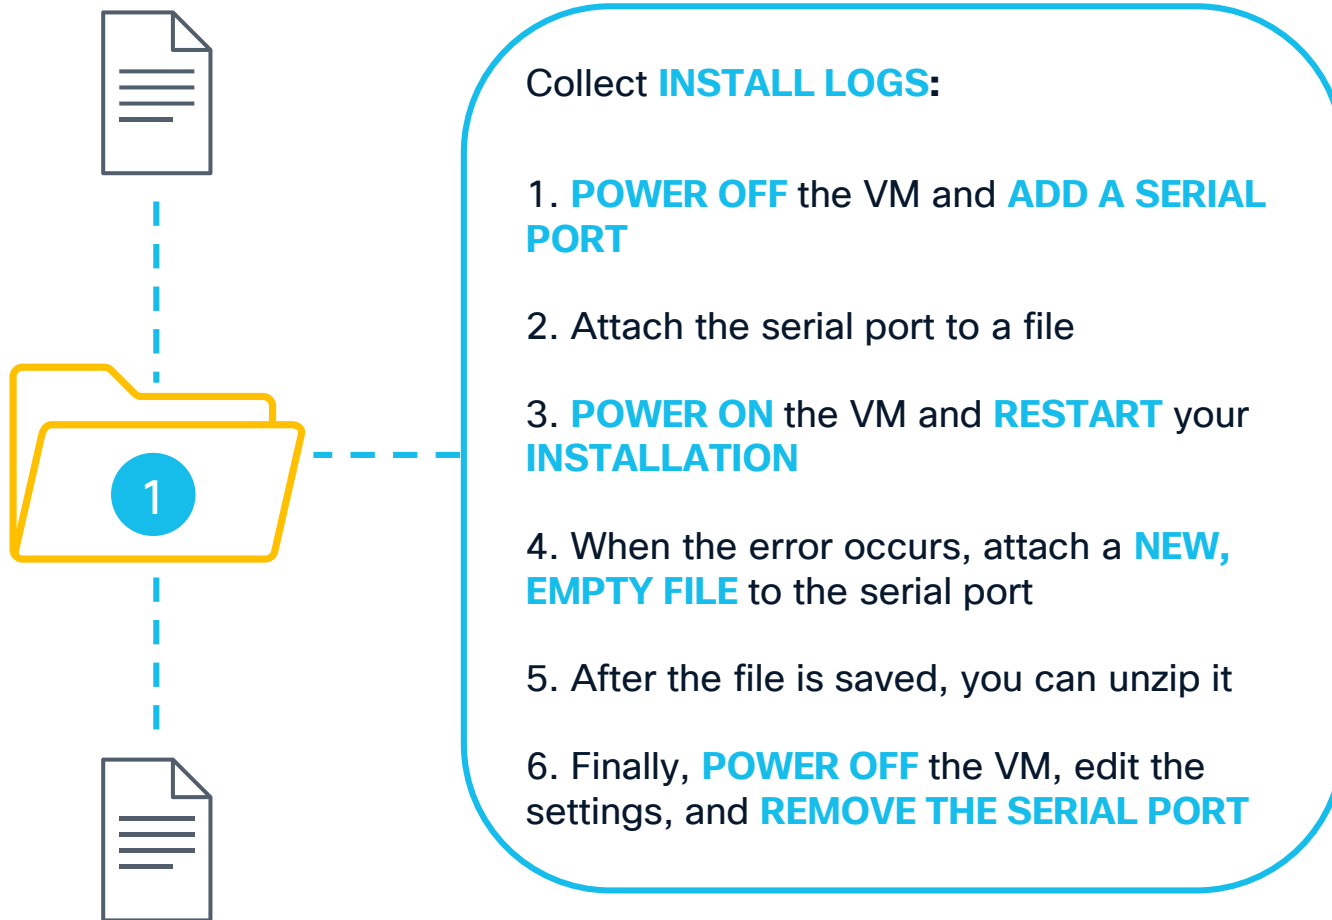

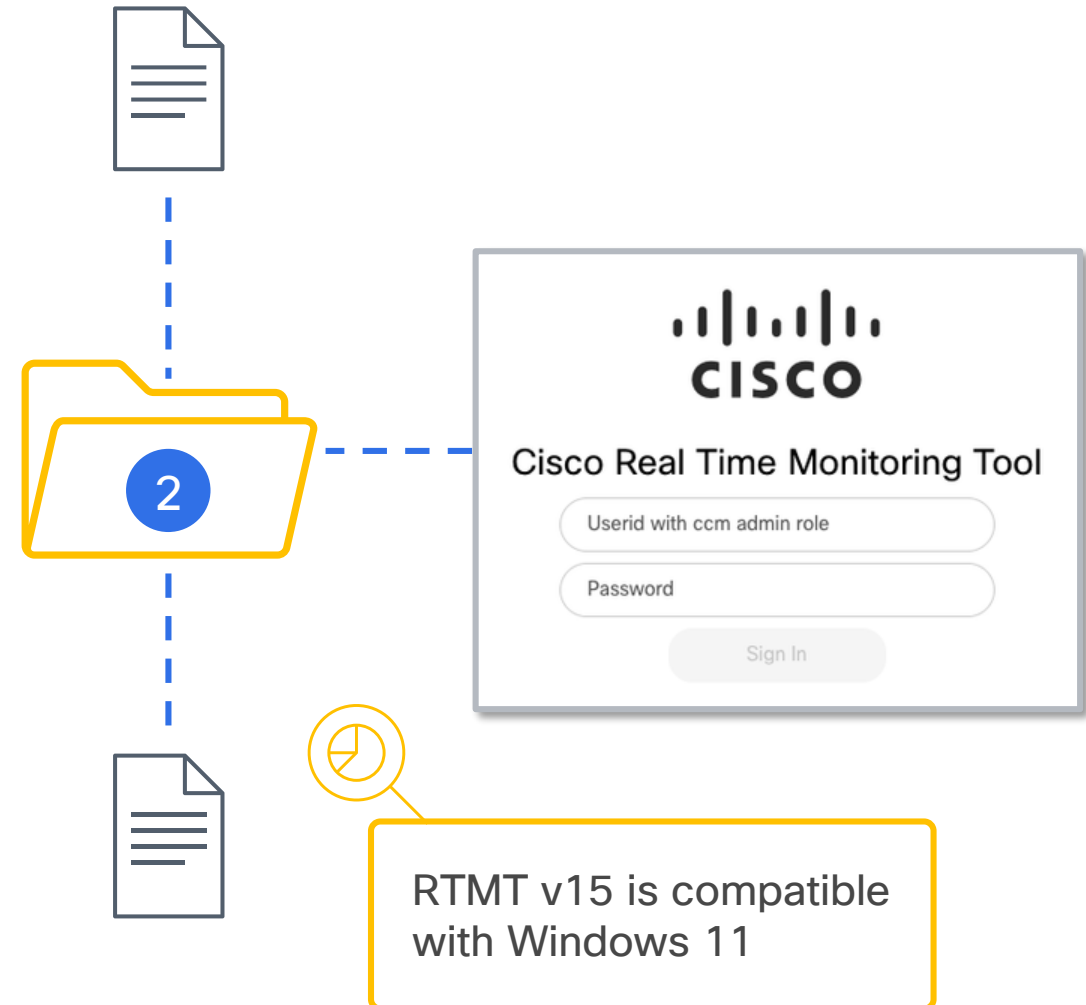

General Troubleshooting

General Troubleshooting

Serial Port: Fresh Install

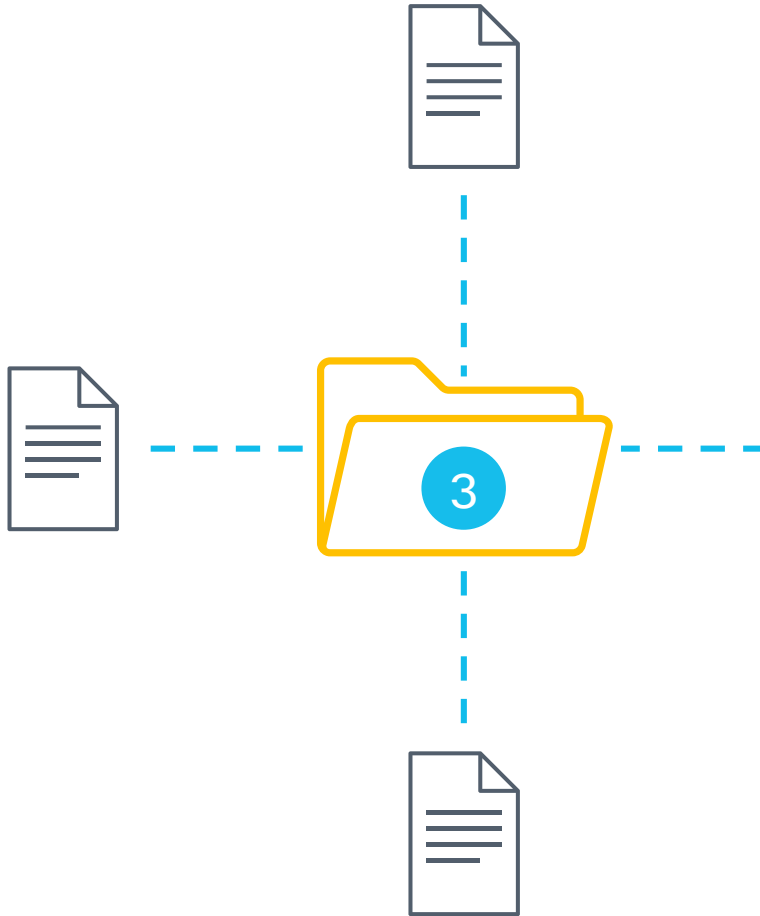

RTMT: Simple Upgrade

General Troubleshooting

Recovery Disk: Fresh Install

Collect **INSTALL LOGS**:

1. **MOUNT** and **BOOT** to Recovery Disk, and press “Alt+F2” to enter command prompt

2. **IDENTIFY LARGEST PARTITION** using `df -h`

3. **FIND INSTALL LOGS** within `cd /mnt/<partition>/log/install`

4. **ASSIGN IP ADDRESS AND DEFAULT GW:**

```
if config eth0 <ip_address> netmask <netmask>
route add default gw <default_gateway> eth0
```

5. **TRANSFER FILES** via SFTP

General Troubleshooting

For **PCD MIGRATION / UPGRADE TASK FAILURES**, collect **PCD LOGS**:

```
file get activelog /tomcat/logs/ucmap/log4j/*  
file get activelog /tomcat/logs/afg-lib/log4j/*  
file get activelog /tomcat/logs/platform-api/log4j/*
```

In addition to **INSTALL LOGS** and the following output from the node that fails:

```
utils service list
```

Where the following service needs to be **STARTED**:

```
Platform Administrative Web Service[STARTED]
```

For PCD Upgrade or Migration tasks to version 15, must use PCD 15

General Troubleshooting

For **SUB INSTALL FAILURE**,
collect **PACKET CAPTURE LOGS**:

1. While SUB installs, **RUN** the
following command:

```
utils network capture-rotate file <filename> sizePerFile 1 maxFiles 2 size all host all <IP/hostname>
```

2. Once the error occurs,
STOP the capture by typing “Ctrl +
C”

3. **COLLECT** the **Packet Capture
Logs** via Real-Time Monitoring
Tool:

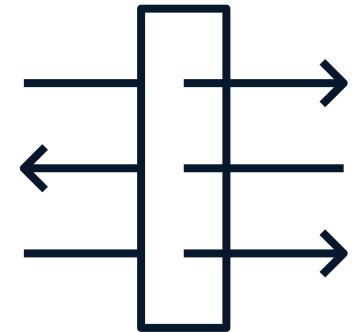

System > Trace & Log Central >
Collect Files

General Troubleshooting

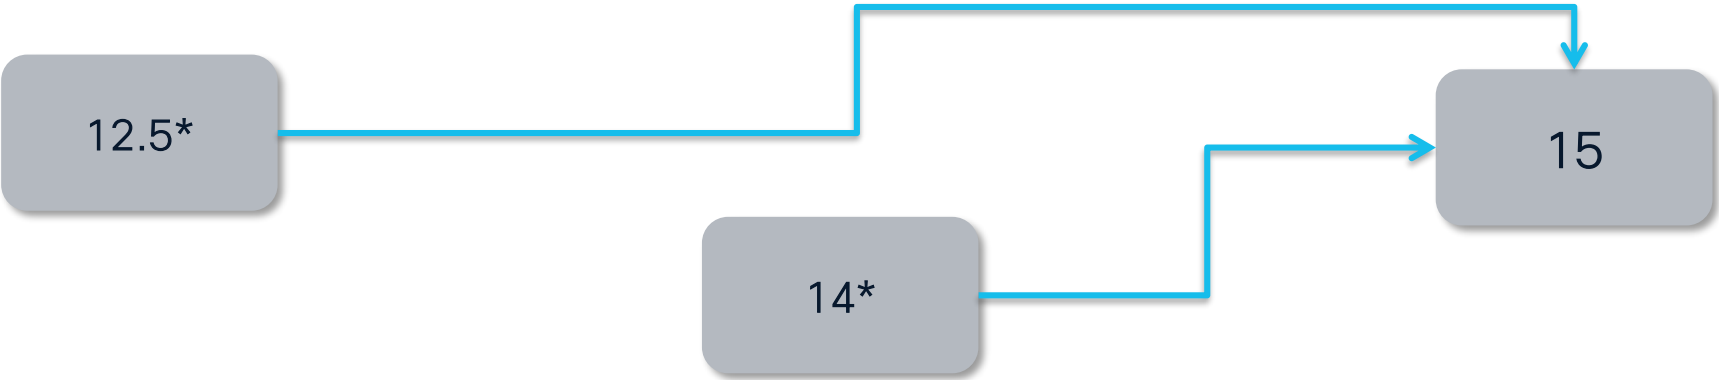

These are the ports to filter by:

- **22**: Cisco SFTP service
- **1515**: Database replication between nodes during installation
- **8500**: Intra-cluster replication of system data by IPsec Cluster Manager
- **1500**: Database connection (1501 / TCP is the secondary connection)

Solving Common Issues

Simple Upgrade

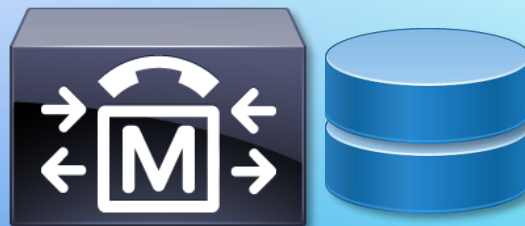

→ Direct Standard Upgrade (Simple Upgrade)

Insufficient Disk Space

Problem

During Direct Standard Upgrade, Pre-Upgrade COP file showing error:

Failed: You **only have X bytes (X GB) of required 48657636134 bytes (45 GB)** common partition space required for direct upgrade to 15. You do not need to cleanup inactivelog. /common/log/inactive space will be automatically reclaimed. Cleanup X bytes of space from /common/log/active, /common to free up the required space.

Fail OS and Infrastructure Checks Errors

Fix

- Reduce log files by adjusting RTMT Alert Properties:

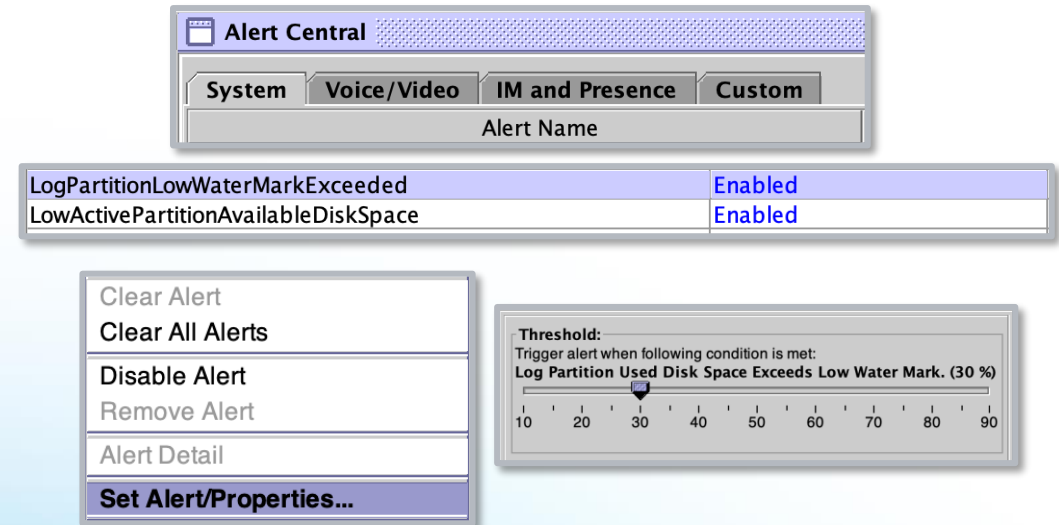

LogPartitionLowWaterMarkExceeded - reduce threshold to 30% (default 90%)

LogPartitionHighWaterMarkExceeded - reduce threshold to 40% (default 95%)

- Delete old ATS & RIS Database Aborted Transaction logs:

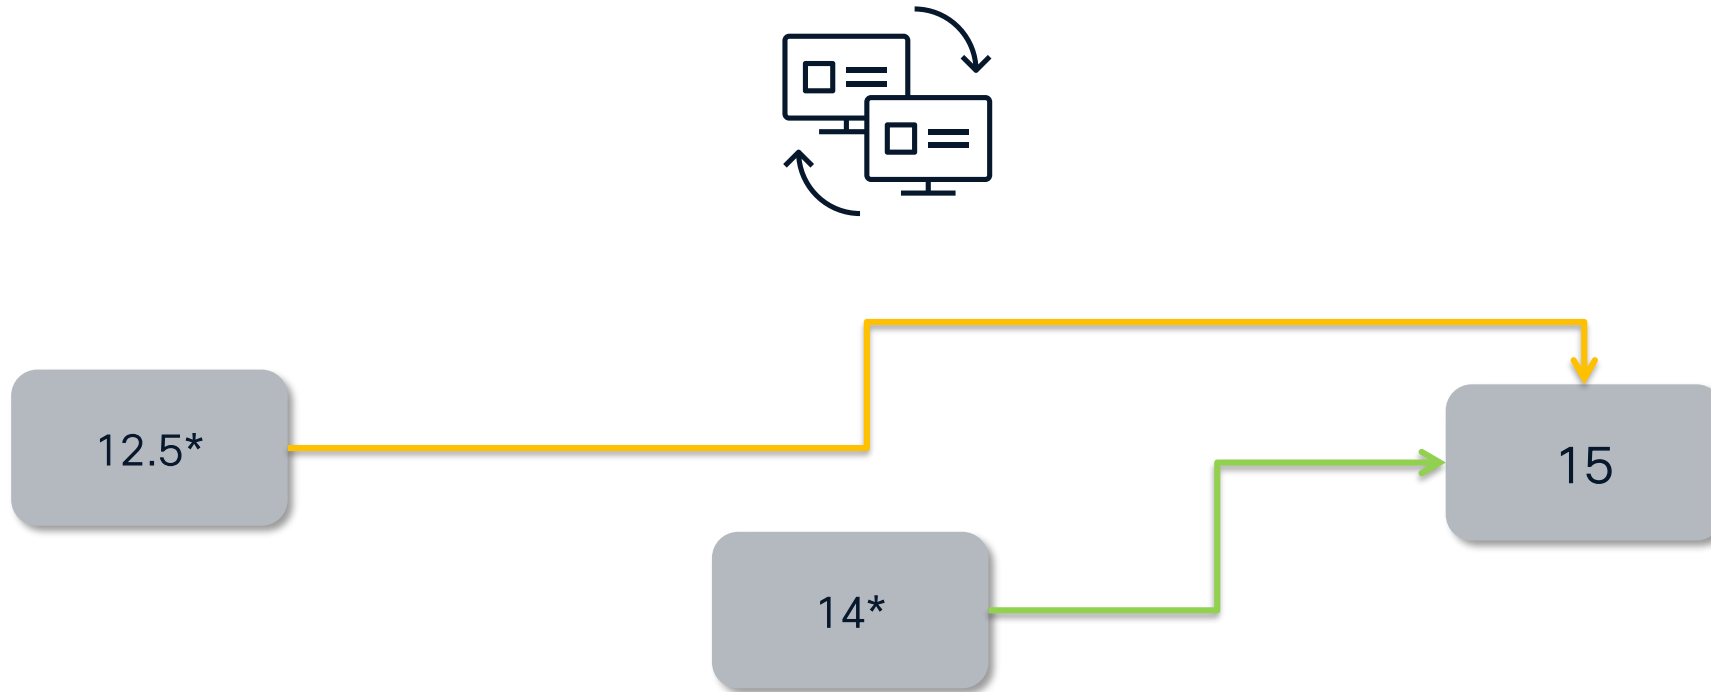

```
file delete activelog cm/log/informix/ats/* noconfirm
```

```
file delete inactivelog cm/log/informix/ats/* noconfirm
```

ciscocm.free_common_space_v1.11.k4.cop.sha512

Fresh Install with Data Import

Fresh Install with Data Import (V2V)

Issues Due to Hostname Format

Problem

After the node is migrated to version 15, it presents issues with Serviceability page

Conditions

- Migration to version 15
- Hostname not compliant with RFC1123

Cisco CCMService Web Service traces:

```
2025-11-06 09:00:00,000 INFO [http-nio-1027-exec-19] ccm.serviceability - Remote Server NOT in cluster <abc>
2025-11-06 09:00:00,001 ERROR [http-nio-1027-exec-19] ccm.serviceability - Exception com.cisco.ccm.serviceability.admin.general.GenSRMajoredException: null at com.cisco.ccm.serviceability.admin.util.CheckRemote.CheckRemoteServerWithCluster(CheckRemote.java:125) ~[ccmservice.jar:?]
```

Issues Due to Hostname Format

Fix

In the original Server, change the hostname to one compliant with RFC1123

Then, reattempt the Migration

- Start and end with alphanumeric character
- Contains only lowercase alphanumeric characters and '-'

node--sub1.domain.com
nodesub#1.domain.com ❌

Upgrade History from 8x/9x

Problem

Migration from 10x/11x/12x/14x to 15 fails for any node with upgrade history from 8x or 9x

Conditions

- Node has upgrade history from 9x or earlier versions
- Pre-Upgrade COP file shows:

Pre-Upgrade COP file output:

Before direct migration to version 15, ensure that the following COP is installed on all Cisco Unified Communications Manager(CUCM) and on all IM and Presence(IMP) nodes -
`ciscocm.CSCwi52160_15-direct-migration_v1.0.k4.cop.sha512`

Upgrade History from 8x/9x

Install Logs:

```
06/11/2025 09:00:00 component_install|(CAPTURE) Thu
Jun 11 09:00:00 2025 dblinit-
plugin.initializeIDS ERROR: Error Initializing IDS
['Error executing [[\'sh\', \'-c\', "su -c \'source
/usr/local/cm/db/informix/local/ids.env
; /usr/local/cm/bin/cmoninit -wivy\' - informix"']]
returned [1]']|<LVL::Debug>
04/23/2025 22:41:22 component_install|(CAPTURE) Wed
Apr 23 22:41:18 2025 dblinit-
plugin.run ERROR: ERROR: 'CCMLOG'|<LVL::Debug>

Apr 23 22:41:18 2025 cm-dbms-
install ERROR: Install Post Failed|<LVL::Debug>
```

Fix

Install ciscocm.CSCwi52160_15-direct-
migration_v1.0.k4.cop.sha512

file view install system-history.log

Fail OS and Infrastructure Checks Errors

Problem

When running the Pre-Upgrade COP file, getting the errors within section:

FAIL OS and Infrastructure Checks

Conditions

Pre-Upgrade COP file shows errors:

FAIL: This server is using an **older filesystem type** (ext3)

FAIL: This node was fresh-installed with single **80GB virtual hard disk**, which is not supported in release 15

Fail OS and Infrastructure Checks Errors

Fix

Perform backup-reinstall-restore in a new VM with v15 OVA, then direct upgrade to 15

Or use a Direct Migration option

Database Component Error

Problem

Fresh Install with Data Import fails with Unrecoverable Internal Error

Conditions

- Fresh Install with Data Import to version 15
- Install Logs show:

Install Logs:

```
11/06/2025 09:00:00 IPM|Internal Error,  
File:ipm.c:2014, Function:  
ipmReadNormalizedInputLine(), "rpm --percent -iv  
--replacefiles /common/rpm-archive/14.0.1.13900-  
155/RPMS/thirdparty/cm-lib-1.0.0.0-1.i386.rpm "  
failed (1).|<LVL::Critical>  
11/06/2025 09:00:00 appmanager.sh|Internal Error,  
File:/usr/local/bin/base_scripts/appmanager.sh:38  
3, Function: import_install(), failed to  
import_install  
infrastructure_post components|<LVL::Critical>
```

Database Component Error

Fix

Engage TAC

Collect Installdb Logs

Installdb Logs location should be as follows:

```
/mnt/<partition>/log/taos-log-a/cm/trace/dbl/sdi
```

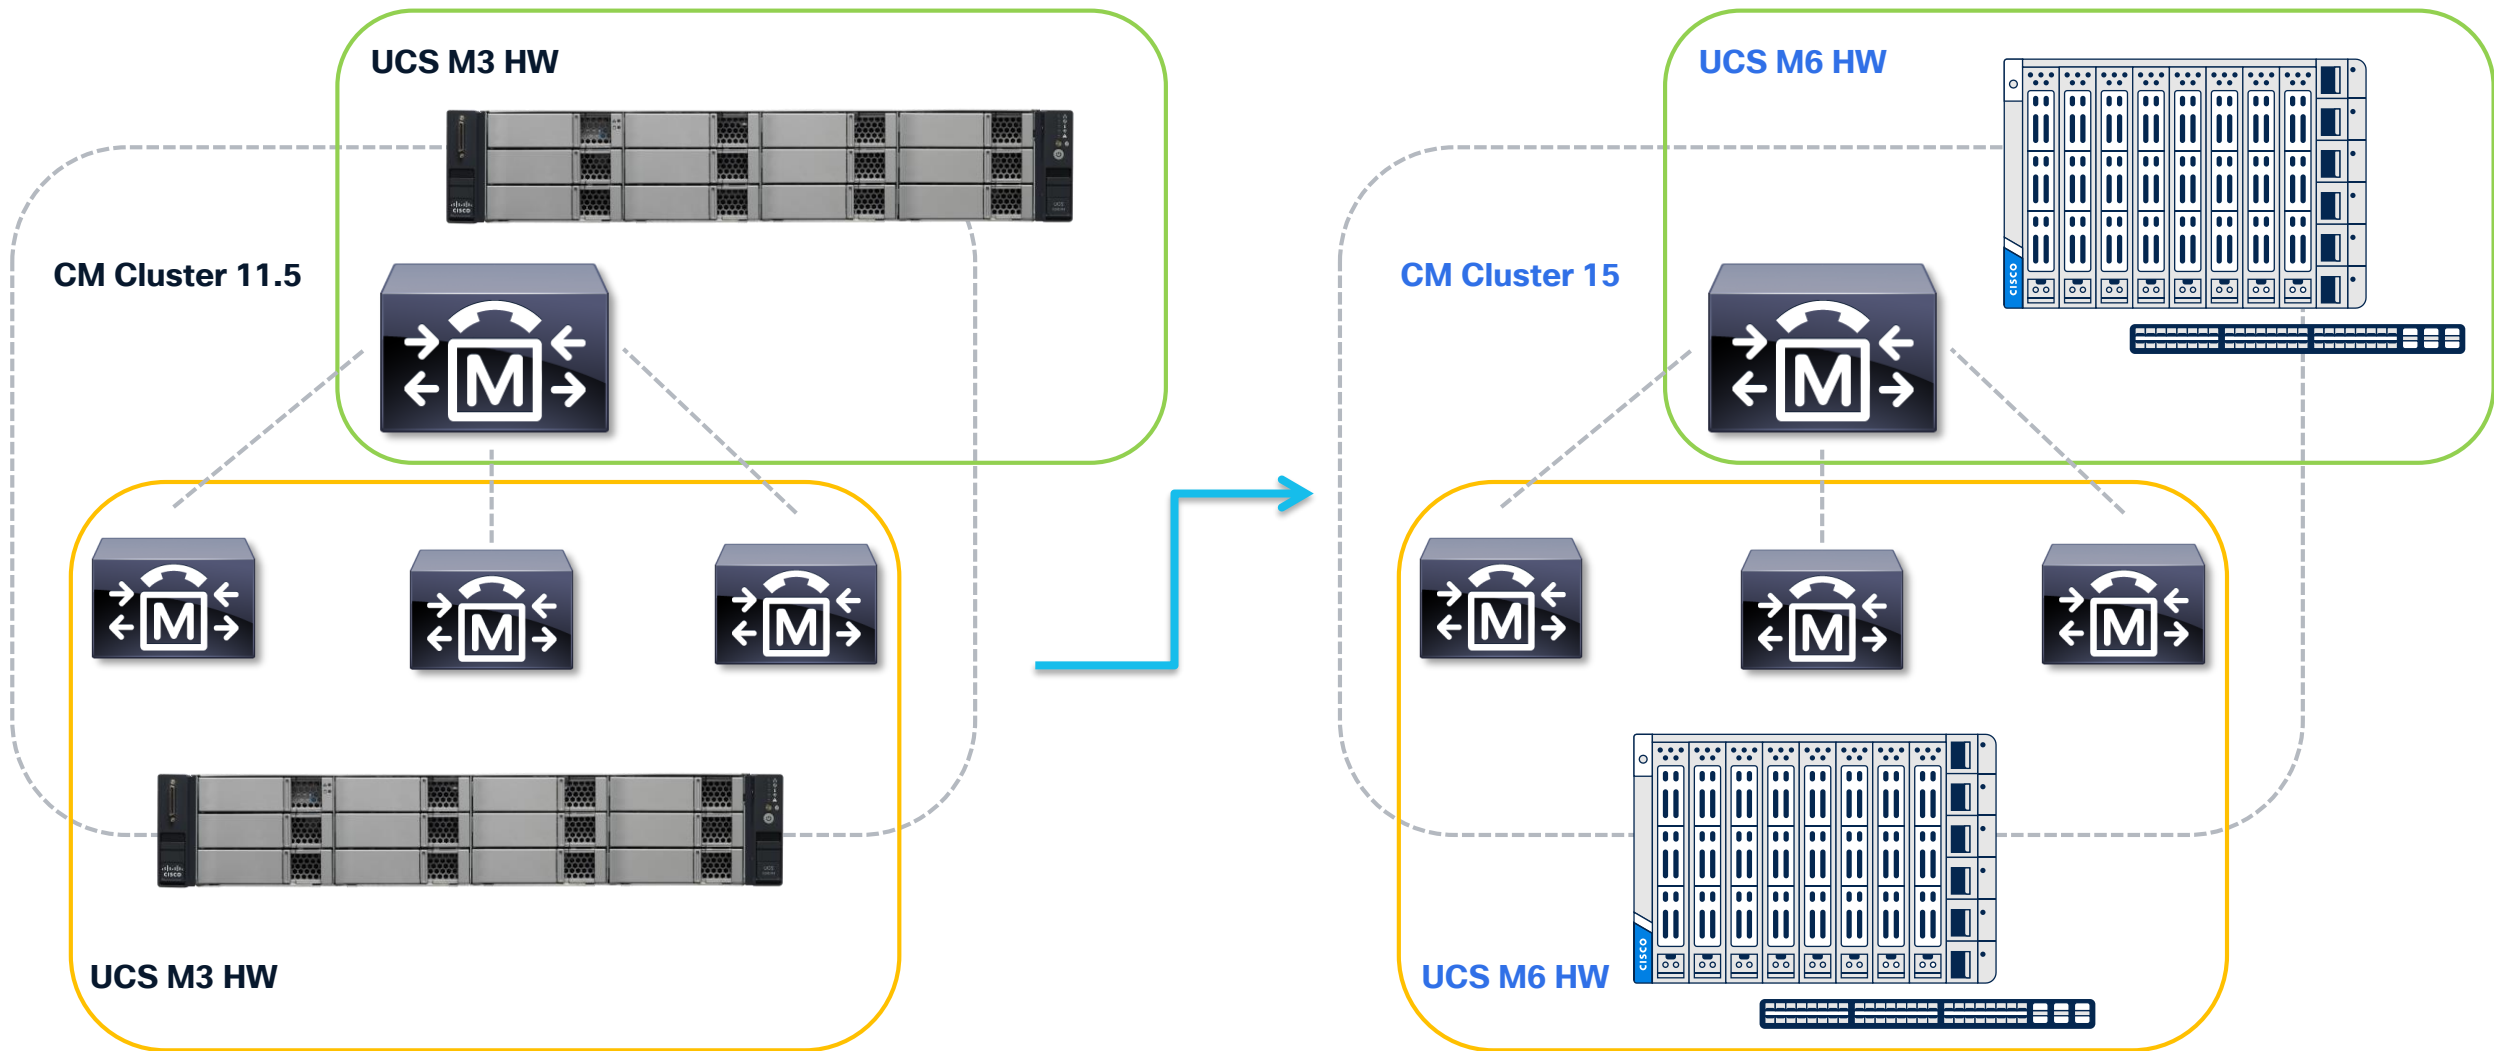

To find the Installdb Logs:

```
find / -name installdb*
```

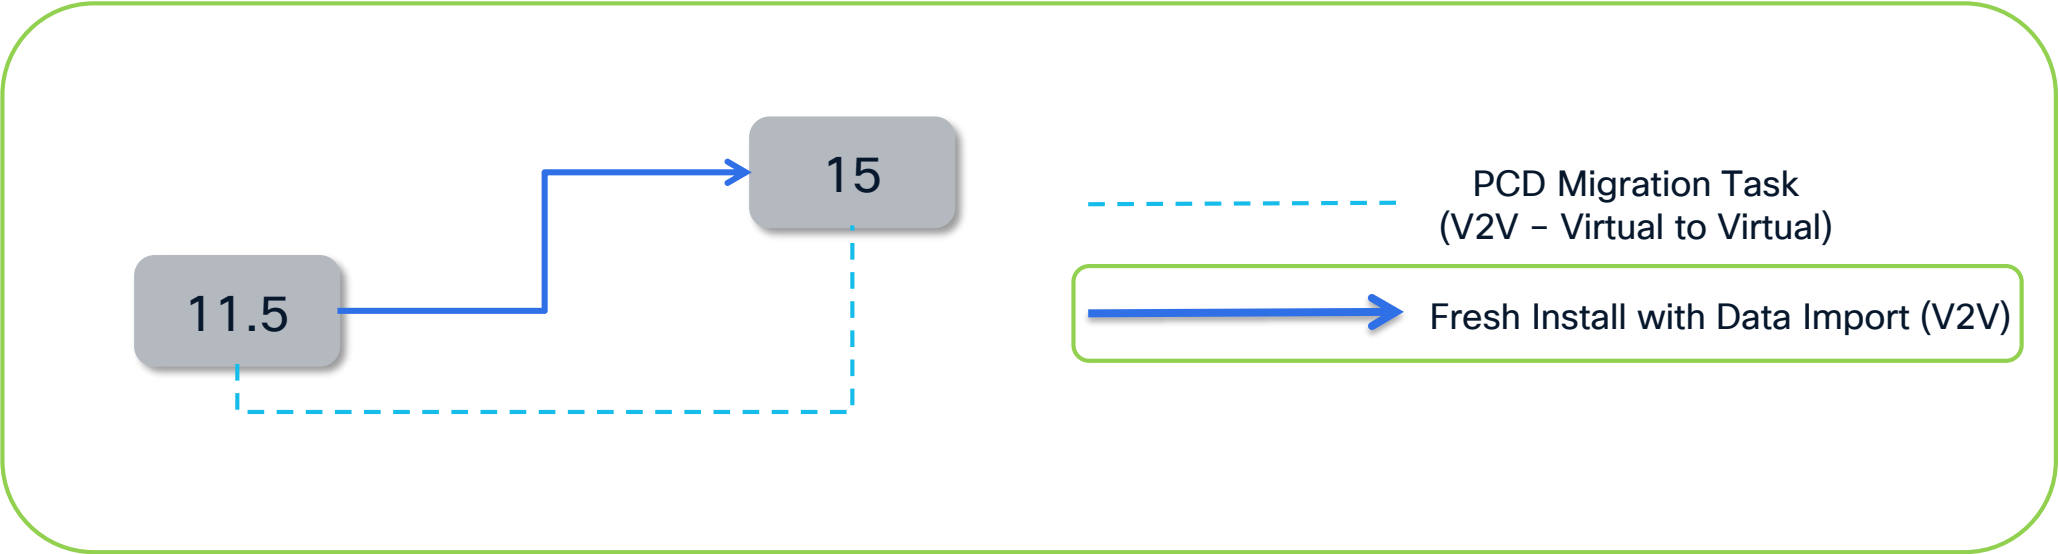

If possible, **test** the migration in an isolated environment

Let's Upgrade!

☐ Use configured OCSP URI

OCSP Configured URI

☐ Enable revocation check

Check Every: ☐ Hours ☒ Days

Certificate Revocation List (CRL) Configuration

☒ Enable CRL

CRL Distribution Point URI

Save

 *- indicates required item.

 **OCSP responder's (signing) certificate/ CA certificates must be uploaded to trust store before enabling OCSP.

- TLS connections now support **CRL VERIFICATION**
- Performed for **ALL SECURE CLIENTS**
- Connections are **NOT MADE** with entities whose **CERTIFICATES** have been **REVOKED**

TLS 1.3 Connections (15 SU2)

Renegotiation

Renegotiation is not possible in a TLS v1.3 connection

Cipher Suites

TLS 1.3 supports cipher suites that do not include key exchange or signature algorithms

Supports:

TLS_AES_256_GCM_SHA384

TLS_CHACHA20_POLY1305_SHA256

TLS_AES_128_GCM_SHA256

Removes: DES, AES-CBC, SHA-1, etc.
