

# Cisco Security Cloud Control

**cisco** Live !

Bringing the Cisco Security Portfolio Together

Adam Bragg  
Product Owner

# Cisco Webex App

## Questions?

Use Cisco Webex App to chat with the speaker after the session

## How

- 1 Find this session in the Cisco Live Mobile App
- 2 Click “Join the Discussion”
- 3 Install the Webex App or go directly to the Webex space
- 4 Enter messages/questions in the Webex space

**Webex spaces will be moderated by the speaker until June 13, 2025.**

<https://ciscolive.ciscoevents.com/ciscolivebot/#BRKSEC-1656>

# Your Speaker – Adam Bragg

- I Live in New Hampshire in the United States.
- With Cisco since April 1, 2015 (no joke!).
- Product Owner for Security Cloud Control.
- Started my IT Career in 1997 as a QA Engineer.
- Enjoys traveling (27 countries, 5 continents so far). Favorite trip: South Africa!
- Butler and chauffeur to my two children.
- I learned how to swim last year at age 49!
- I have a strong “Dad Joke” game.

# Agenda

- 01 Why Security Cloud Control?
- 02 Getting Started with Security Cloud Control
- 03 Product Provisioning
- 04 User Management
- 05 Unified User Experience
- 06 A Look Ahead...What Is Next?
- 07 Key Takeaways

The background of the slide is an abstract composition of vibrant, blurred light streaks in shades of blue, yellow, and orange, creating a sense of motion and energy. A dark blue rectangular box is positioned on the left side, containing the main text.

**Security Cloud Control is the  
Experience You Have Been  
Asking For!**

# Security Cloud Control – Mission

Reduce complexity for customers

## Cisco Strategy

Meet unified solution demand

Reduce complexity for customers

Optimize cross product integrations

## Security Cloud Control

## Customer Benefits

Improved security outcomes

Improved operational efficiency

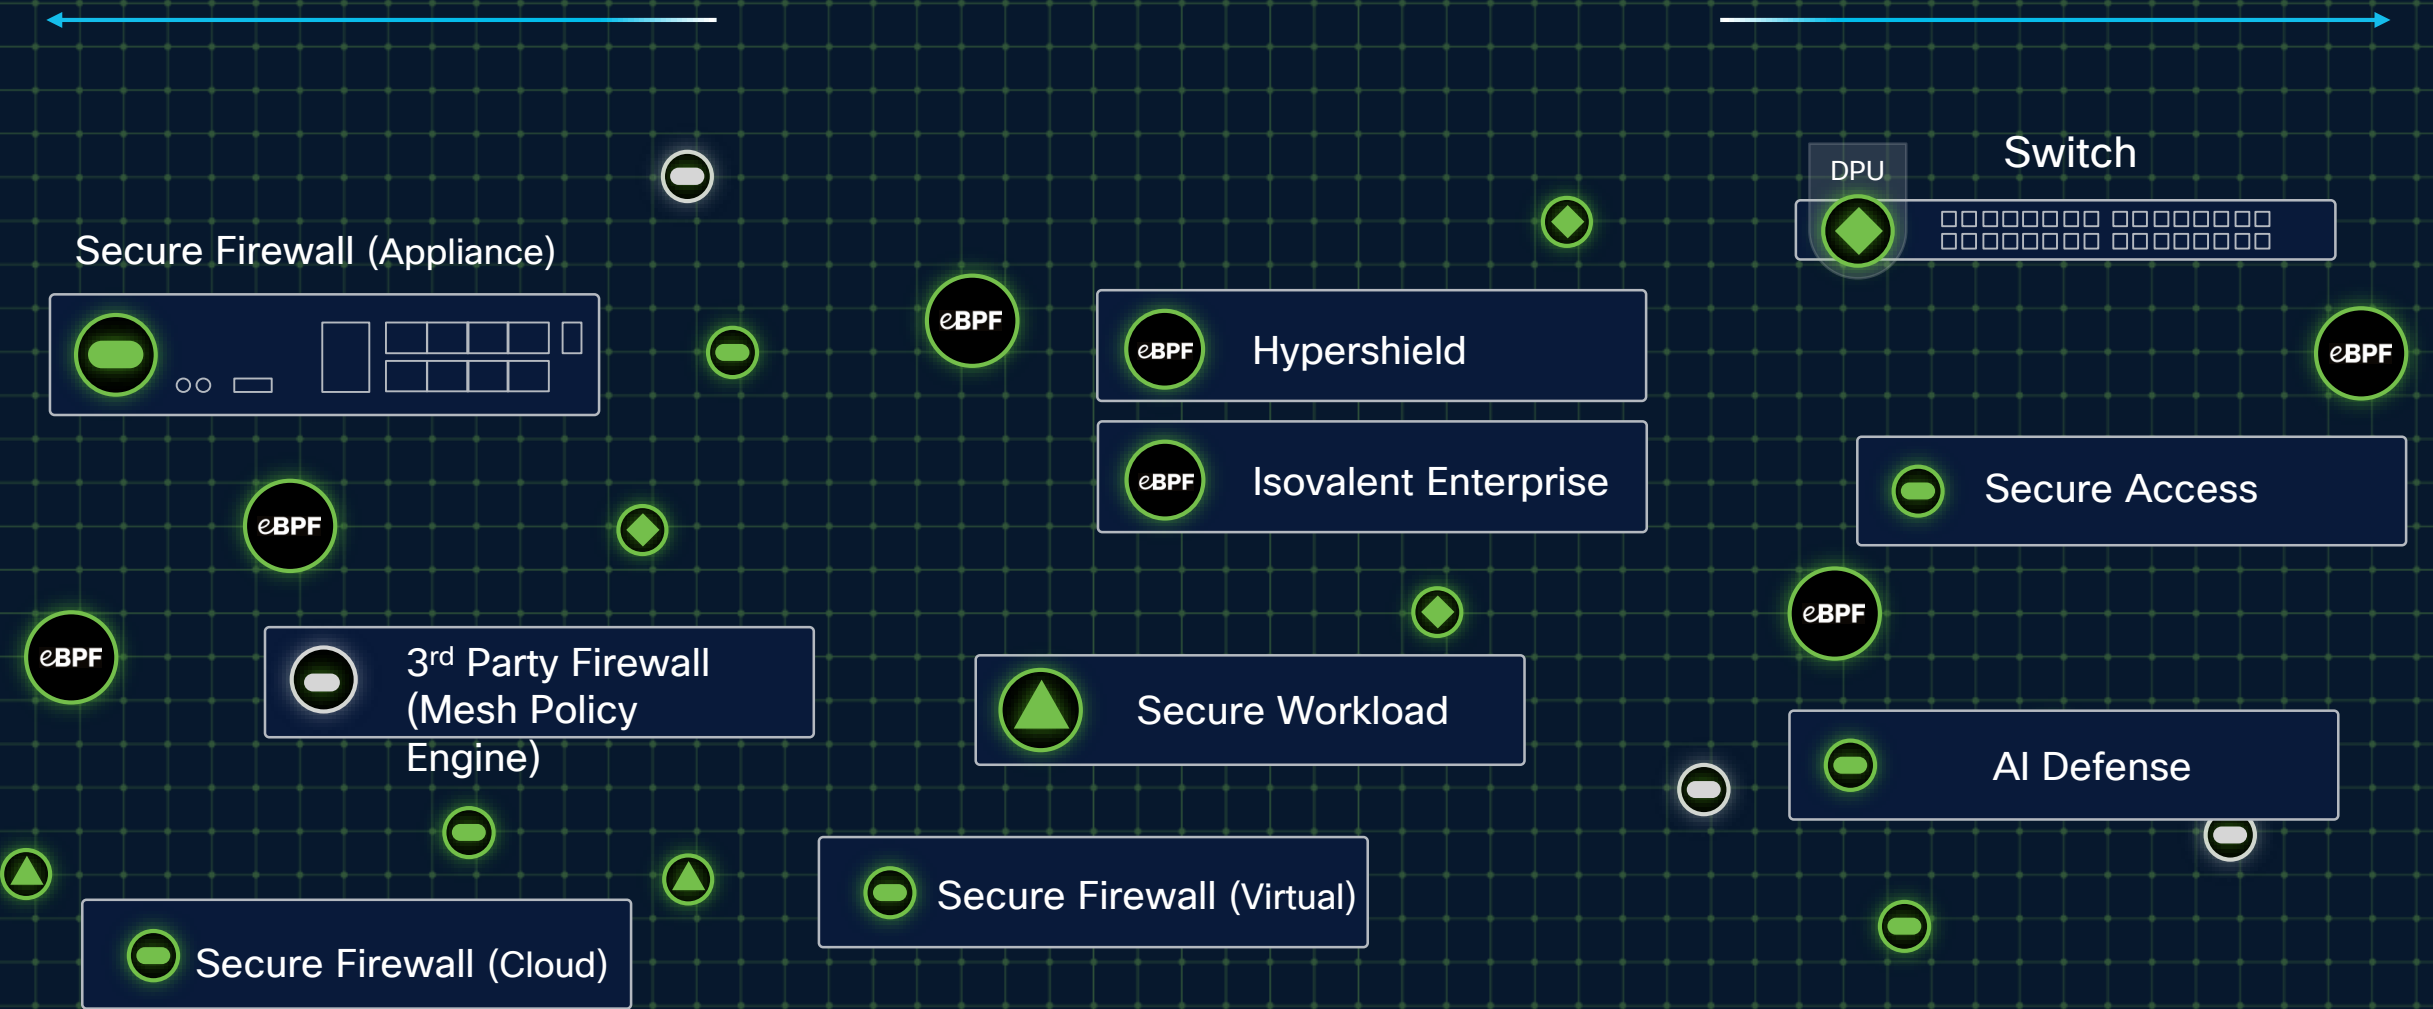

Easier setup and configuration

Platform advantage for MSPs

Secure Firewall  
Secure Switch  
**Secure Access**

# A Unified User Experience

*What Does Security Cloud Control Provide?*

- Common Product Provisioning Flows
- Common User Management
- Standardize User Interfaces
- Unified AI Assistant
- Shared Objects
- Shared Services
- Unified Inventory and Dashboards
- Multi-Tenancy
- Managed Service Provider (MSP) Services

# Agenda

- 01 Why Security Cloud Control?
- 02 Getting Started with Security Cloud Control
- 03 Product Provisioning
- 04 User Management
- 05 Unified User Experience
- 06 A Look Ahead...What Is Next?
- 07 Key Takeaways

# Currently a Security Cloud Control Customer?

## *Getting Started*

- Current Security Cloud Control (formerly Cisco Defense Orchestrator) Customers do not have to do anything.
- Products include:
  - Cisco Secure Firewall (FTD & ASA)
  - Cloud-Delivered FMC
  - Multicloud Defense
- These customer are already entitled to our new Security Cloud Control Features
  - No actions are needed on their part.
  - The experience will change slightly, but the functionality is all the same

# Currently a Secure Access Customer?

## *Getting Started*

- Current Security Secure Access Customers will automatically have a Security Cloud Control organization
- These customer are already entitled to our new Security Cloud Control Features
  - No actions are needed on their part.
  - There is an enablement plan that will take place this calendar year.
  - The experience will change slightly, but the functionality is all the same.

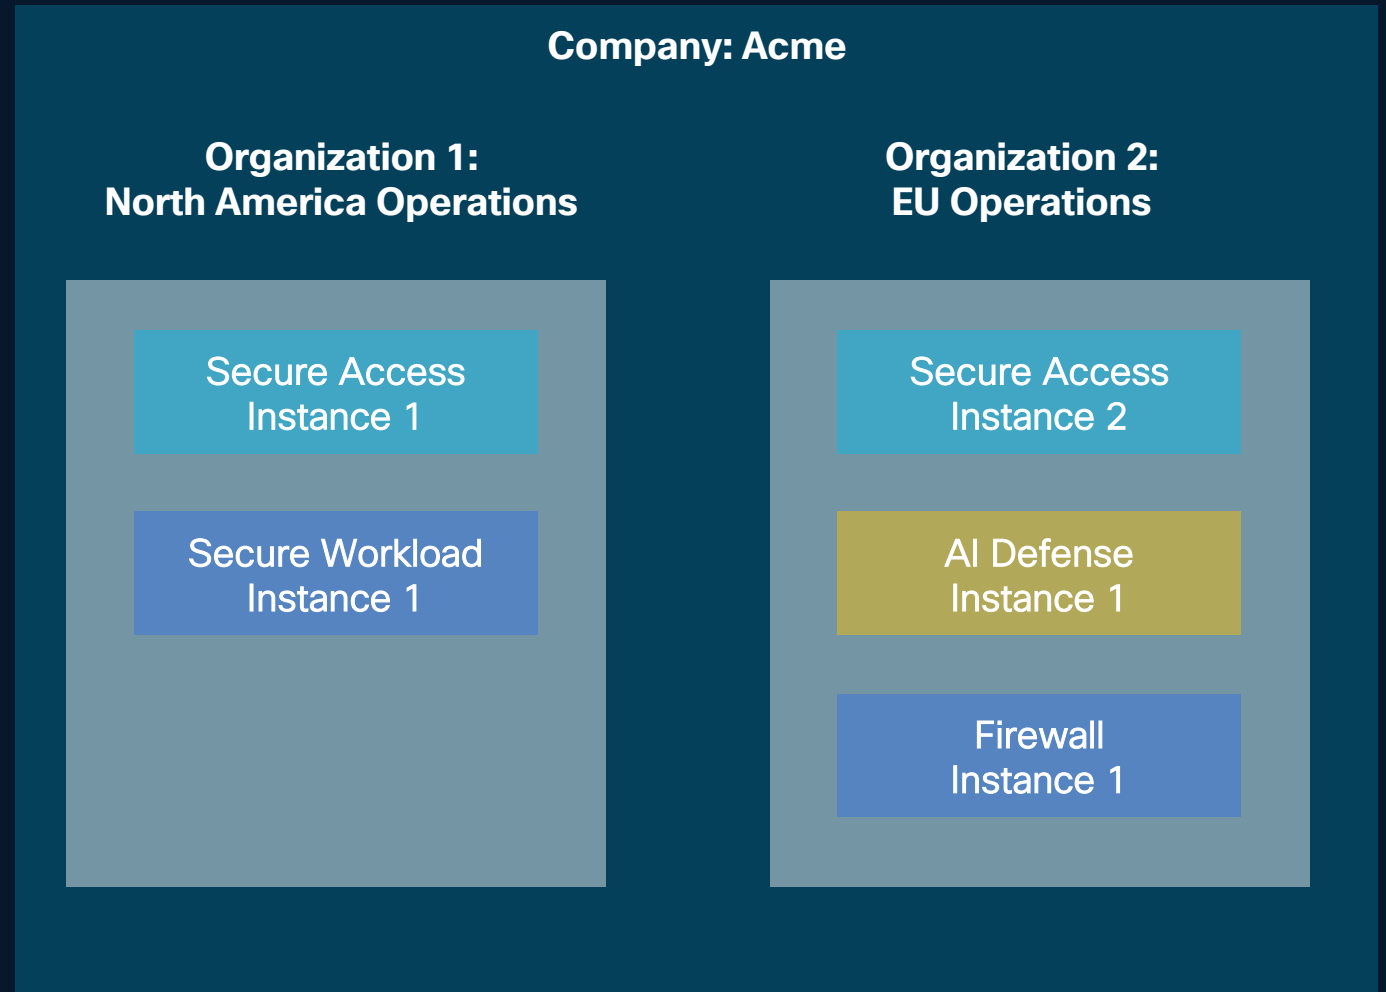

# New to Security Cloud Control?

## *Getting Started*

- No problem!
- Navigate to [security.cisco.com](https://security.cisco.com), and create an organization.
- Creating an organization is free!
- Organizations are region specific.
- All Products that you enable for an organization will be in the same region.
- If you have a requirement to have regional separation of data, create a new organization in that region.

# What is an “Organization” in Security Cloud Control?

- Trust boundary inside which products are provisioned
- Products in the same organization trust one another and share navigation in Security Cloud Control
- Can have a *single* instance of each product
- Must have a region set
- Per product region assignment after claiming aligned to Org region
- Can be renamed at any time

# Organization creation region setting

Org region setting determines product and service provisioning

- Once set, *it cannot be changed*.

## Product Provisioning

- During the first product provisioning in an organization, specific region/country selection is offered if applicable.

## Subsequent Claims

- SCC will attempt to pick as close as possible a match to the organization region for every new product provisioned. Users will be warned on any differences.

## U.S. DC's hold all SCC org admin info

- Only administrative roles, user IDs\*, and activity are stored in the SCC US region. \*unless Federated SAML
- All other product-specific data (user data, activity logs), are stored in respective product regions

# Organization creation region setting

Why might a customer require more than one Organization?

- You require more than one instance of a product (e.g. two Secure Access accounts / tenants)
- You have chosen different geographic regions for different products

- 04 User Management
- 05 Unified User Experience
- 06 A Look Ahead...What Is Next?
- 07 Key Takeaways

# Claiming and Activation

## *Product Provisioning*

- Security Cloud Control Provides a Single Experience to Claim, Manage, and Activation Product Subscriptions.
- This vastly simplifies deployment of the Cisco Security Portfolio, both for our SaaS and non-SaaS products.
- Claim codes are sent via e-mail.
- Claim codes are one time use.

# Customer journey to tenant and product onboarding

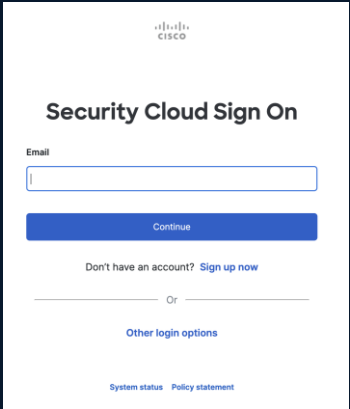

1

Initial  
Claim  
Email

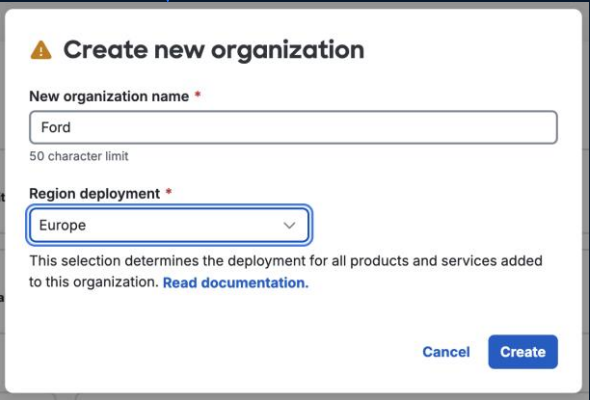

2

Sign into  
[security.cisco.com](https://security.cisco.com)  
with SCSO

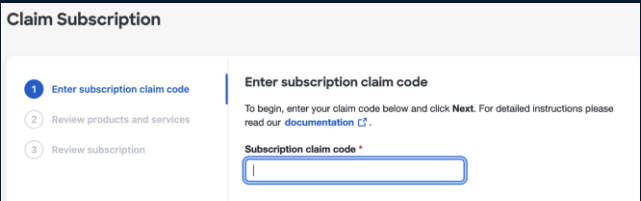

3

Create your  
Organization

4

Claim your  
subscription

# What is a claim code?

- Code generated by Cisco that when claimed, activates product subscriptions
- Will require assignment of products to available geographies within the current Organization's global designation
- Usable only once

## Claim Subscription

1 Enter subscription claim code

2 Review products

3 Review subscription

### Enter subscription claim code

To begin, enter your claim code below and click **Next**. For detailed instructions please read our [documentation](#) .

Subscription claim code \*

# Product & Subscriptions claim process

1. Claim subscription with claim code
2. Product and service activation status (start date etc.)
3. Action required to activate the product
4. Summary of products and their current activation state

# Unified User Management

## *User Management*

- Secure Cloud Control provides one place to configure:
  - Users
  - User Permissions
  - User Groups
  - Identity Providers
- No longer will you need to go to each application to configure the same user again and again.
- Users for existing products will automatically be imported and those user will maintain their existing permissions.

# Per Application Granular Control

## *User Management*

- Each Product still maintains their own administrators and user administration hierarchy.
- Increased enterprise visibility of which users have access to which applications.
- Active Directory Integration supported out of the box
- Bring your own IdP!
- Activity Log tracks user management.

# Consolidated Navigation

*Unified User Experience*

- Multi-product support from the left navigation menu
- Common services, always available
  - User management
  - Favorites
  - Security Devices/Inventory
  - Common Objects
- Unified AI Assistant
- Shared Notifications
- Unified Product Documentation

# Security Cloud Control User Interface

## Summary

- New left navigation integrates product menus from across the portfolio
- Shown only when products are activated and users have access
- Services like search, AI Assistant, notifications, and help expressed globally
- Organizations isolate data and contain multiple products
- View entire organization from a single admin's standpoint

The screenshot displays the Security Cloud Control User Interface. The top navigation bar includes the Cisco logo, the title "Security Cloud Control", a search bar with the placeholder "Type 'Ctrl' + '/' to search", and a user profile dropdown for "Carter Briggs". The left sidebar, labeled "Side Nav", contains an "Organization Switcher" for "Stark Enterprises - North America" and a "Products" menu with items like AI Defense, Firewall, Hypershield, Multicloud Defense, Secure Access, and Secure Workload. Below these are "Platform services" including Favorites, Security Devices, Shared Objects, and Platform Management. The main content area, labeled "Home", features "Top insights & alerts" with three cards: "Elephant flow spike observed", "Risky users accessing privileged apps", and "1% Decrypted traffic towards internet". A "Micro App 1" is also visible. The bottom section, labeled "Micro App 2", shows "Asset connectivity status" with a donut chart indicating 15% disconnected assets (up 8% since yesterday). A table on the right lists "Disconnected assets" by source, including Firewall devices, Universal ZTNA Firewall devices, Network tunnel groups, Resource connectors, Cloud accounts, Tesseract security agents, and Workload agents.

**Organization Switcher**

Organization: Stark Enterprises - North America

**Home**

**Top insights & alerts** 10 new insights

**Micro App 1**

**Configure Secure Access**

You can configure Secure Access later by accessing it from the left nav.

**Elephant flow spike observed**

Data sources: FTD

Traffic has risen steadily over three weeks with some large flows consuming excessive bandwidth, necessitating intervention to avoid performance issues.

Last 24h Details

**Risky users accessing privileged apps**

Data sources: FTD

Implement zero trust access to limit access to only required user groups, and protect your applications from risky users.

Last 24h Details

**1% Decrypted traffic towards internet**

Data sources: FTD

Failure to decrypt a significant portion of traffic poses a severe security risk, potentially concealing malicious activities, leaving your network vulnerable to threats.

Last 24h Details

**Asset connectivity status**

**Micro App 2**

**15%**

Disconnected assets

↑ 8% since yesterday

Connected Disconnected Pending

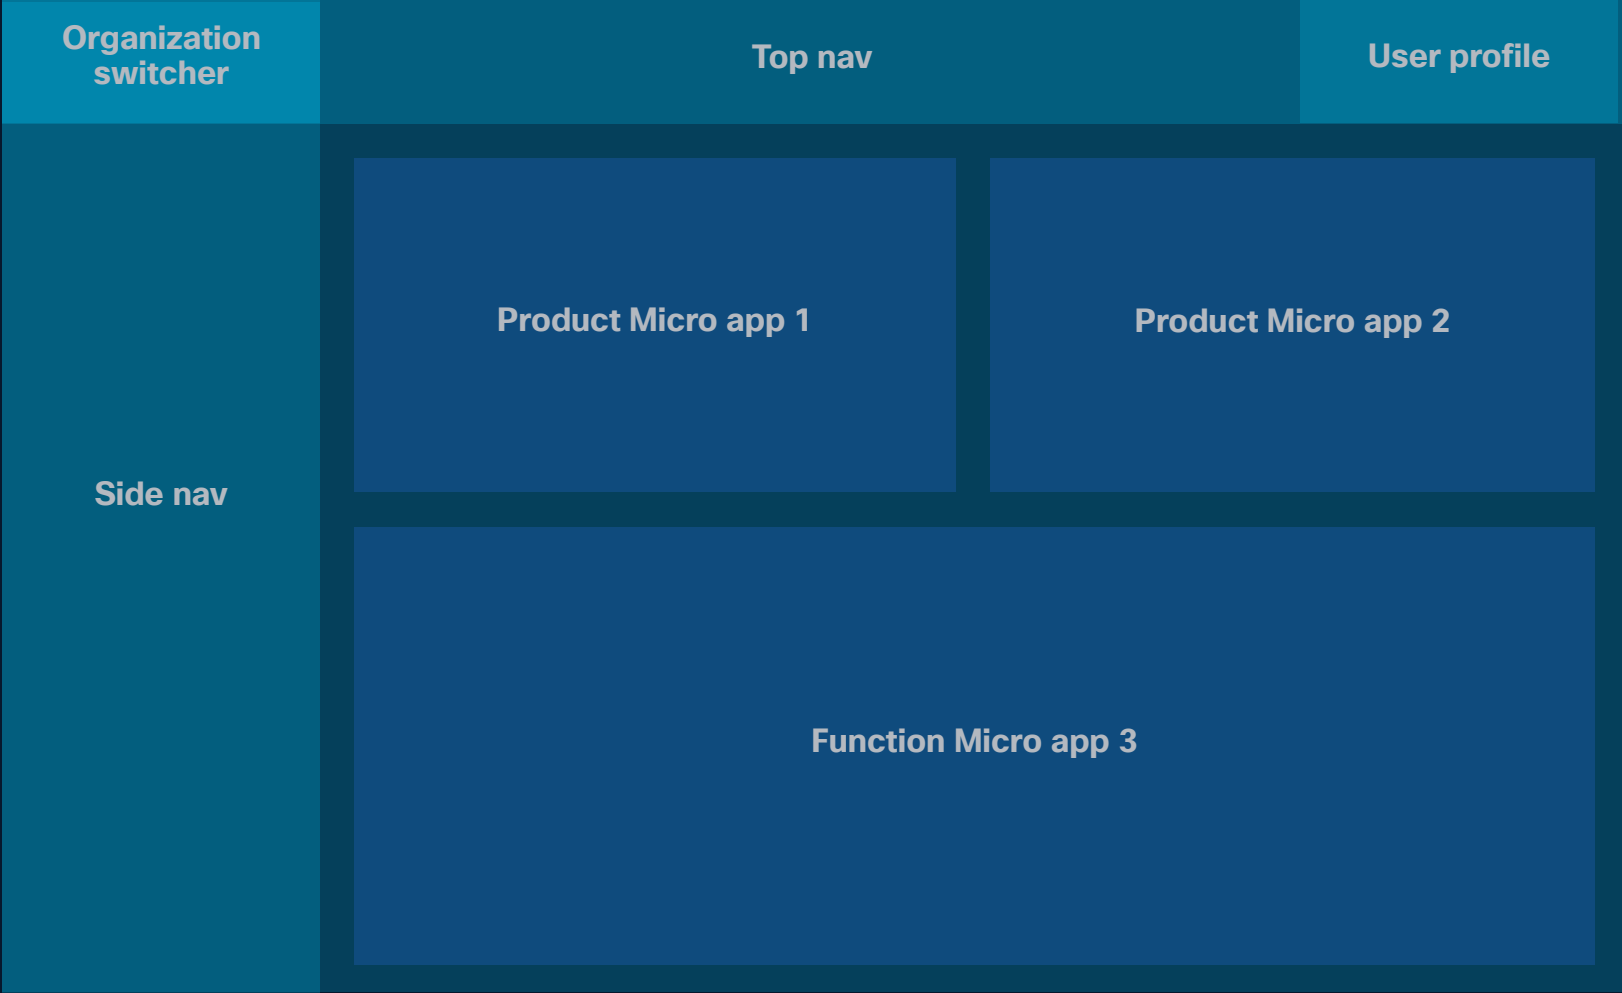

**Disconnected assets** 15% (13,248 / 86,250)

Source	Count	24hr Δ
Firewall devices	250	↑ 11%
View firewall devices		
Universal ZTNA Firewall devices	45	↑ 5%
Network tunnel groups	36	—
Resource connectors	8	—
Cloud accounts	1	—
