The Impact of AI on Job Roles

The AI Workforce Consortium

“Preparing for the Future: AI’s Impact on Information and Communication Technology Jobs”

Leading technology and workforce development companies share how AI is reshaping the most in-demand ICT roles.

https://www.cisco.com/go/ai-workforce-consortium

AI Workforce Consortium Report – Executive Summary

AI Skills are Now Pervasive for Tech Jobs: 78% of the job roles analyzed include AI skills, highlighting a shift in role requirements across the G7 countries across 50+ job roles.

AI Roles Dominate Technology Job Market Growth: 7 of the 10 fastest-growing ICT roles are AI-related, including AI/ML Engineer, AI Risk & Governance Specialist and NLP Engineer.

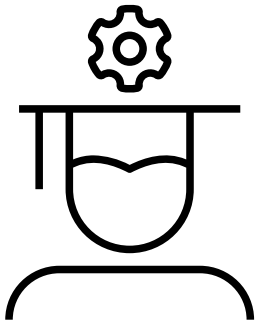

AI Ethics and Governance Skills Remain Critical: Demand for skills in AI Governance is +150% and AI Ethics +125%, reflecting the need for expertise at the intersection of technology, law and ethics.

Critical Technical Skills Deficit and Rising Importance of Human Skills: The skills deficit has reached critical levels in areas such as generative AI, large language models (LLMs), prompt engineering, AI ethics and AI security, while human skills like communication, collaboration and leadership are increasingly prioritized for responsible technology adoption.

Surge in Specialized AI Skills: The AI landscape is quickly shifting from chatbots to agents, driving demand for specialized skills, including AI security +298%, foundation model adaptation +267%, responsible AI +256% and multi-agent systems +245%.

© 2026 Cisco and/or its affiliates. All rights reserved.

Essential foundational skills...

... even for Network Engineers

AI Literacy

- Critically select and use AI tools for the task.
- Responsible use of AI tools.
- Understand ethical aspect of AI.

Data Fundamentals

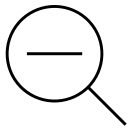

- Data science principles and techniques.
- Data classification.
- Basic analytics.

Prompt Engineering

- How to interact with AI systems with prompt.
- Prompting techniques.
- Potential and limitation of the prompting engineering.

© 2026 Cisco and/or its affiliates. All rights reserved.

Job Roles are shifting for Network Engineers

Do Less of…

- Manual CLI configurations
- Basic Troubleshooting
- Reactive Troubleshooting
- Routine/management tasks
- **Basic Programming (!)**

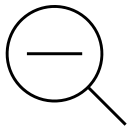

Do More of…

- Develop AI literacy and prompt engineering skills to effectively interact with AI assistants.
- Understanding of AI technologies, and how to manage and leverage AI solutions.
- Data analytics skills.
- Focus on complex problem-solving, strategic planning, and innovation.

© 2026 Cisco and/or its affiliates. All rights reserved.

So are requirements for IT Hiring Managers

Look Less of…

- Candidates with expertise in manual tasks that can be now automated.
- Network-only interest/intelligence.
- Candidates with only traditional network management skills.

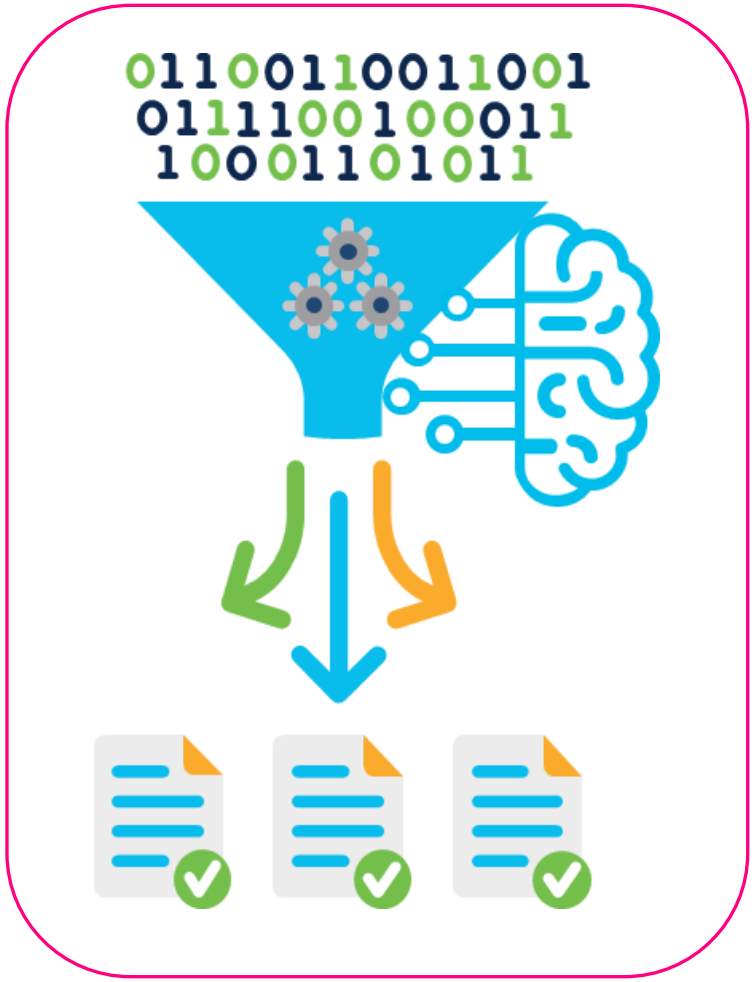

Do More Look More of…

- Candidates with basic understanding of AI and machine learning concepts
- Individuals with AI literacy and prompt engineering skills.
- Candidate with strong problem-solving and analytical skills to interpret AI-generated insights.
- Candidates with the ability to manage and properly leverage AI solutions.

© 2026 Cisco and/or its affiliates. All rights reserved.

AI Journey

Machine Learning (ML)

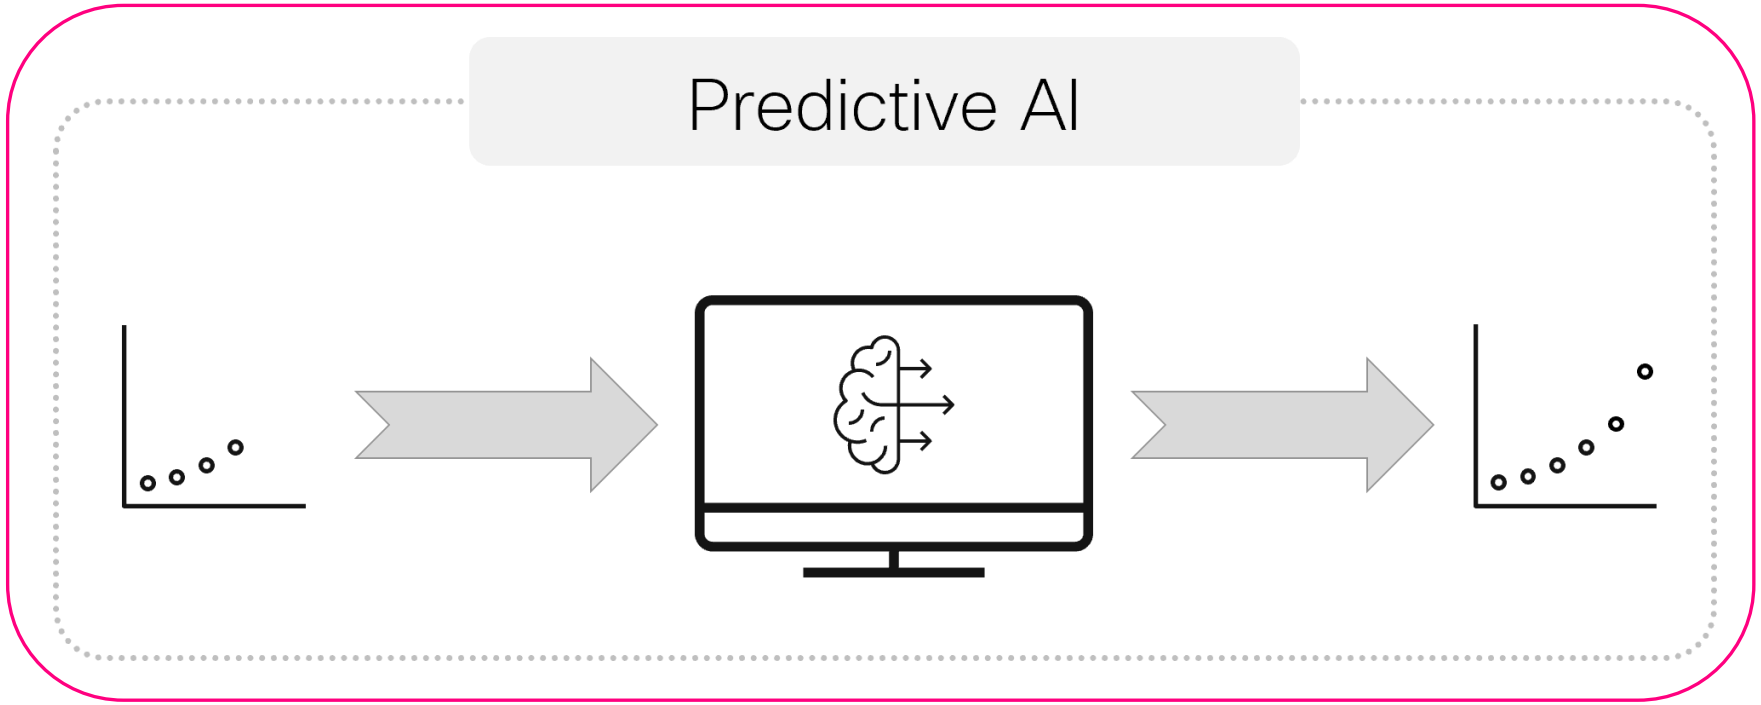

- ML allows computers to auto generate the rules that will allow them to solve problems.
- Rules can be generated after machines are properly trained.
- Training algorithms work by ingesting a huge amount of data related to the problem, along with the correct answers/description.
- After this lengthy process, the machine acquires knowledge about the topic.
- This is called a “trained model”, which is then used during the “inference” process.

© 2026 Cisco and/or its affiliates. All rights reserved.

Using ML Model for Forecasting

Predictive AI:

- Uses ML models trained on historical data to make predictions about the future (e.g. fraud detection, predicting customer behaviors)

Predictive AI

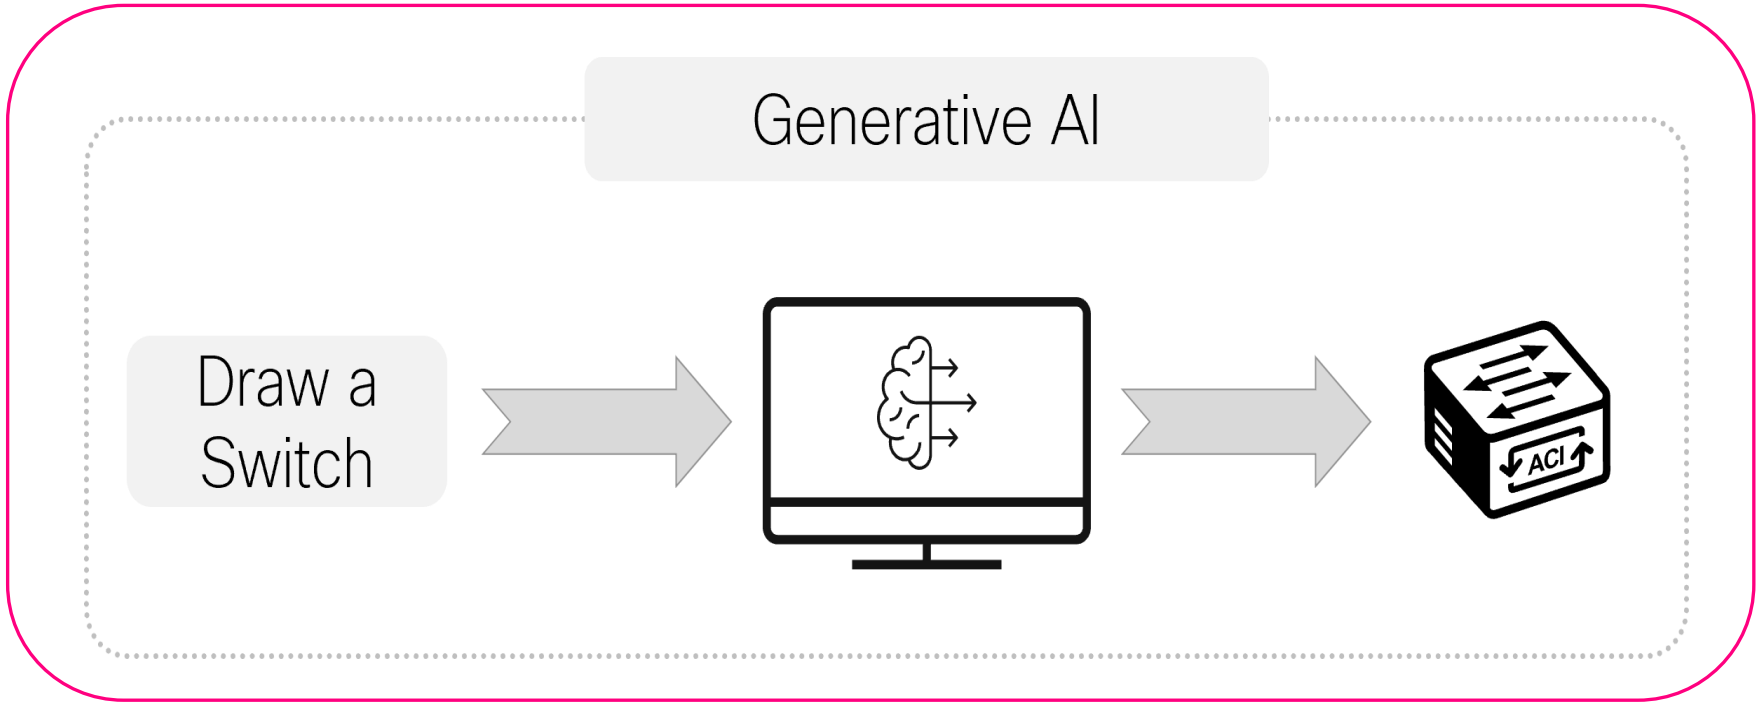

- Uses historical data to make statistical predictions on future outcomes
- Range of techniques from predictive analytics to ML and DL algorithms
- Fraud detection, risk assessment, anomaly detection, forecasting, recommendation systems, customer behavior prediction
- Delivering value today...and indispensable for organizations
- ~100M parameter range

© 2026 Cisco and/or its affiliates. All rights reserved.

Going Beyond Prediction to Creation

Generative AI

- Instead of just predicting outcomes, GenAI creates new data similar to what it has learned (using patterns seen before).

Generative AI

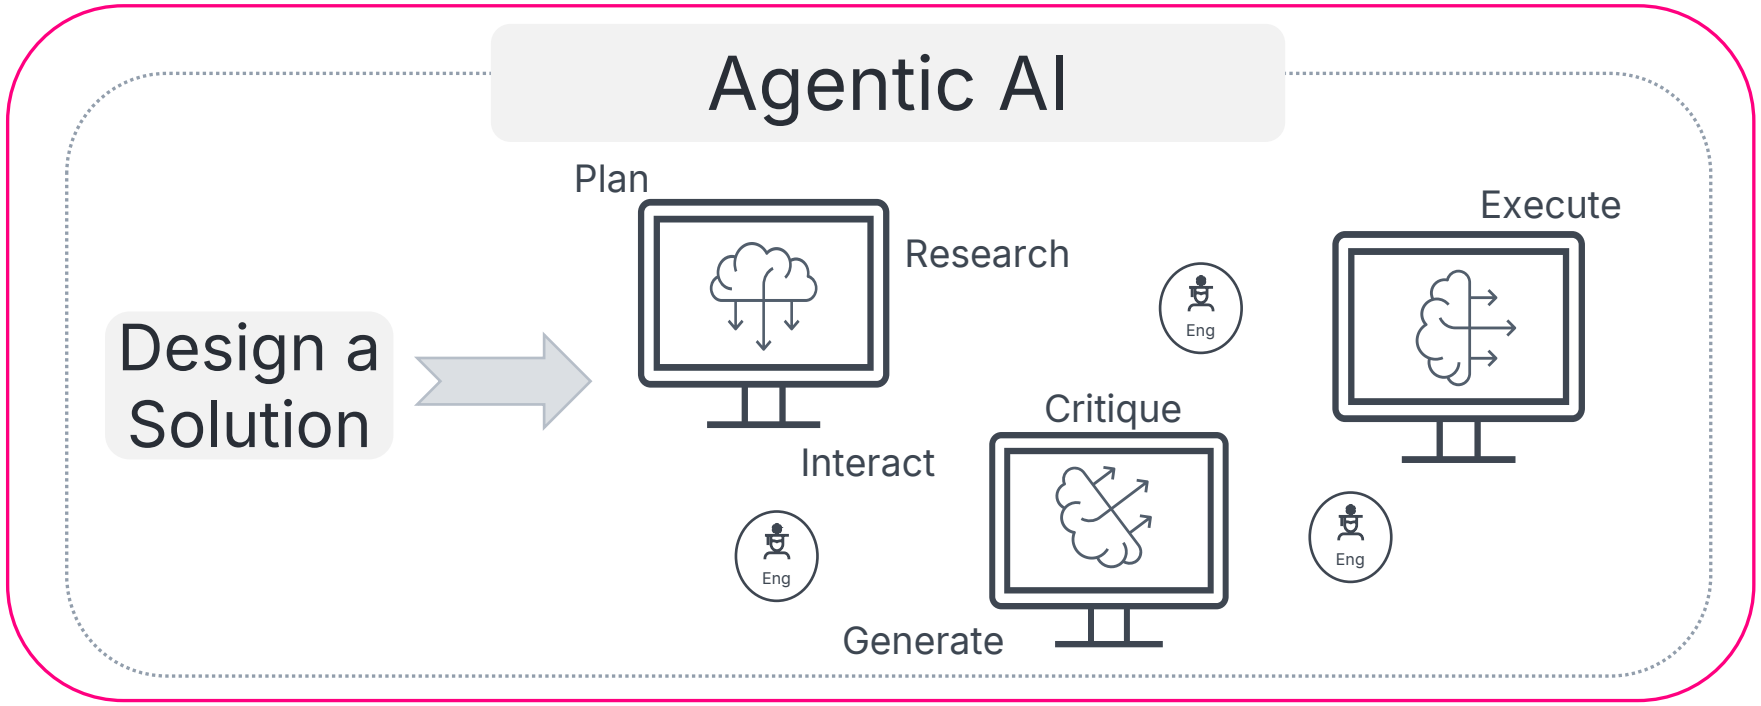

- Uses patterns seen before to predict and generate multimodal content (ChatGPT, DALL-E, Llama)
- Transformative, with unparalleled potential
- Popular model categories: Transformer models (GPT, BERT) and Stable Diffusion
- Large Language Models (LLMs) are significantly larger and resource-intensive than other ML models
- ~1B+ parameter range

© 2026 Cisco and/or its affiliates. All rights reserved.

Combining Human Ingenuity with AI Speed

Agentic AI

- Instead of passively responding to commands, AI agents jump into action to complete tasks end-to-end. Powered by LLMs, agentic AI systems understand, act and learn as trusted collaborators. Agentic AI combines generative AI's creativity with autonomous decision-making, planning and adaptive execution.

Agentic AI

- AI Agents can learn, plan and act autonomously
- Can collaborate with other agents or humans to complete complex, multi-step tasks.
- Processes text, audio, images and sensor data

© 2026 Cisco and/or its affiliates. All rights reserved.

The AI Journey

Artificial Intelligence (inclusive of Narrow, General, Super)

computers perform tasks that mimic human intelligence or do anything a human can do

IBM 701 compute play checkers

Computational Models

Machine Learning

computers can improve at performing tasks with experience

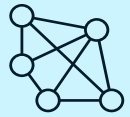

Growth in availability of data

Probability models

Statistical analysis techniques

Predictive AI

computers can train themselves to do tasks based on data

Neural Networks

Natural Language Processing (NLP)

Image recognition

Gen AI

computers create new content similar to the data they were trained on.

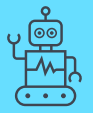

Foundational Models

Image, Code Generation

Domain-specific Models

Agentic AI

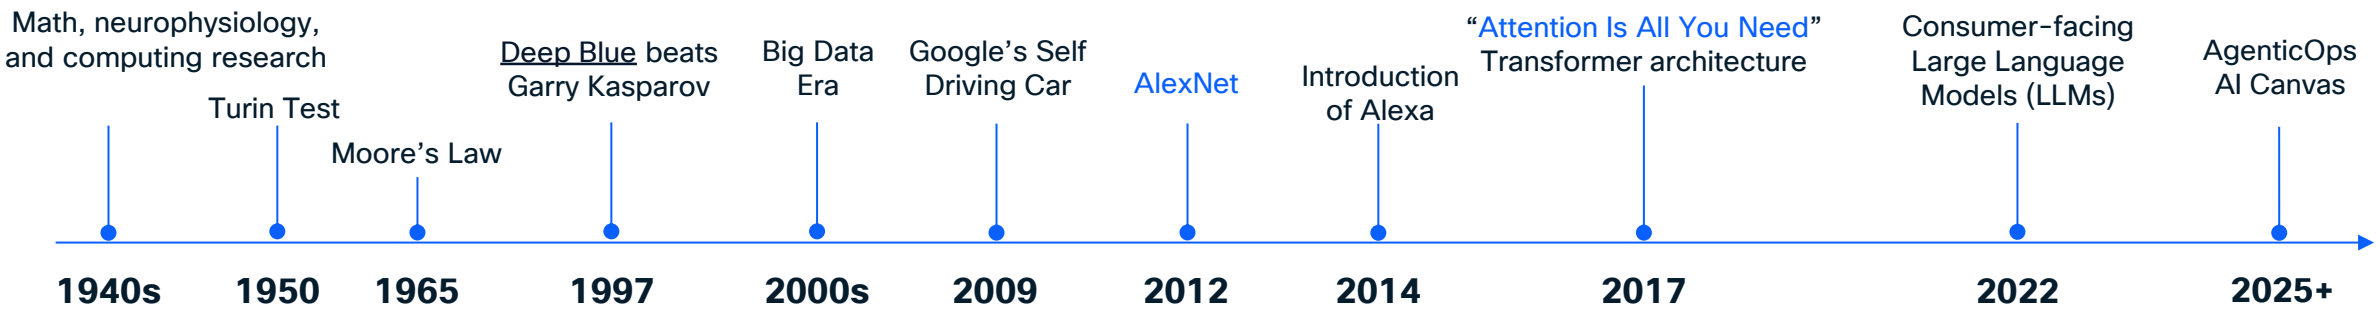

computers collaborate to perform end-to-end tasks.

LLMs Collaborate

Complex Tasks

Autonomous

cisco

AI System

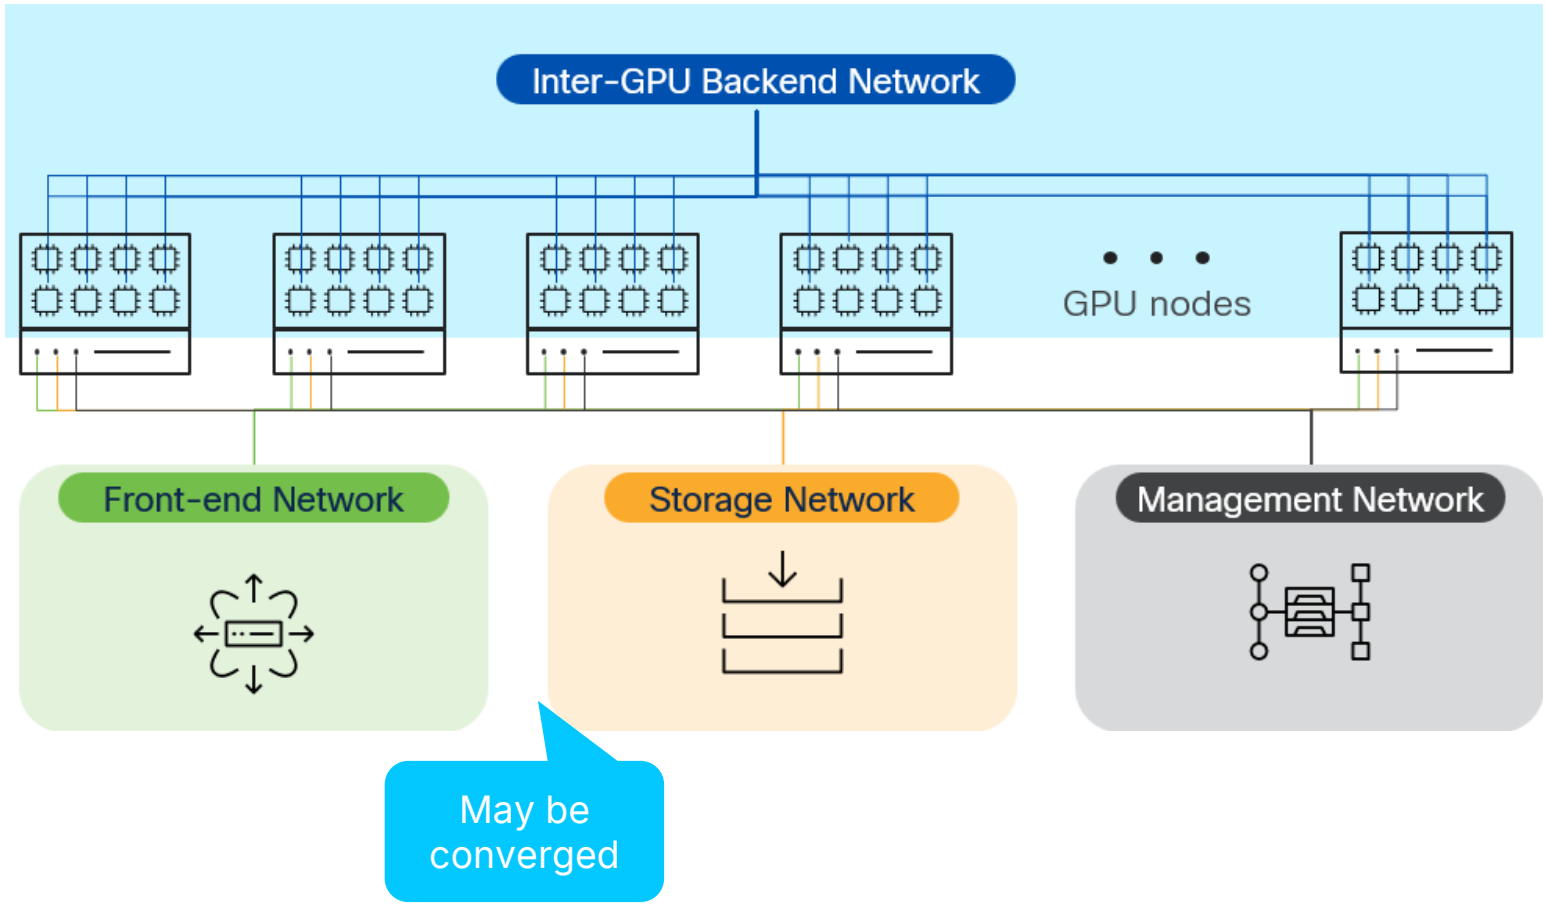

What does a system for AI entail?

© 2026 Cisco and/or its affiliates. All rights reserved.

What does an infra for AI entail?

- Inter-GPU Backend Network. High throughput (100G, 400G, 800G), lossless fabric for training.
- Training requires dense GPU nodes, clusters.
- Training and Inference can differ in compute density and utilization
- Infra can require extensive power and cooling
- Monitoring and Observability on top.

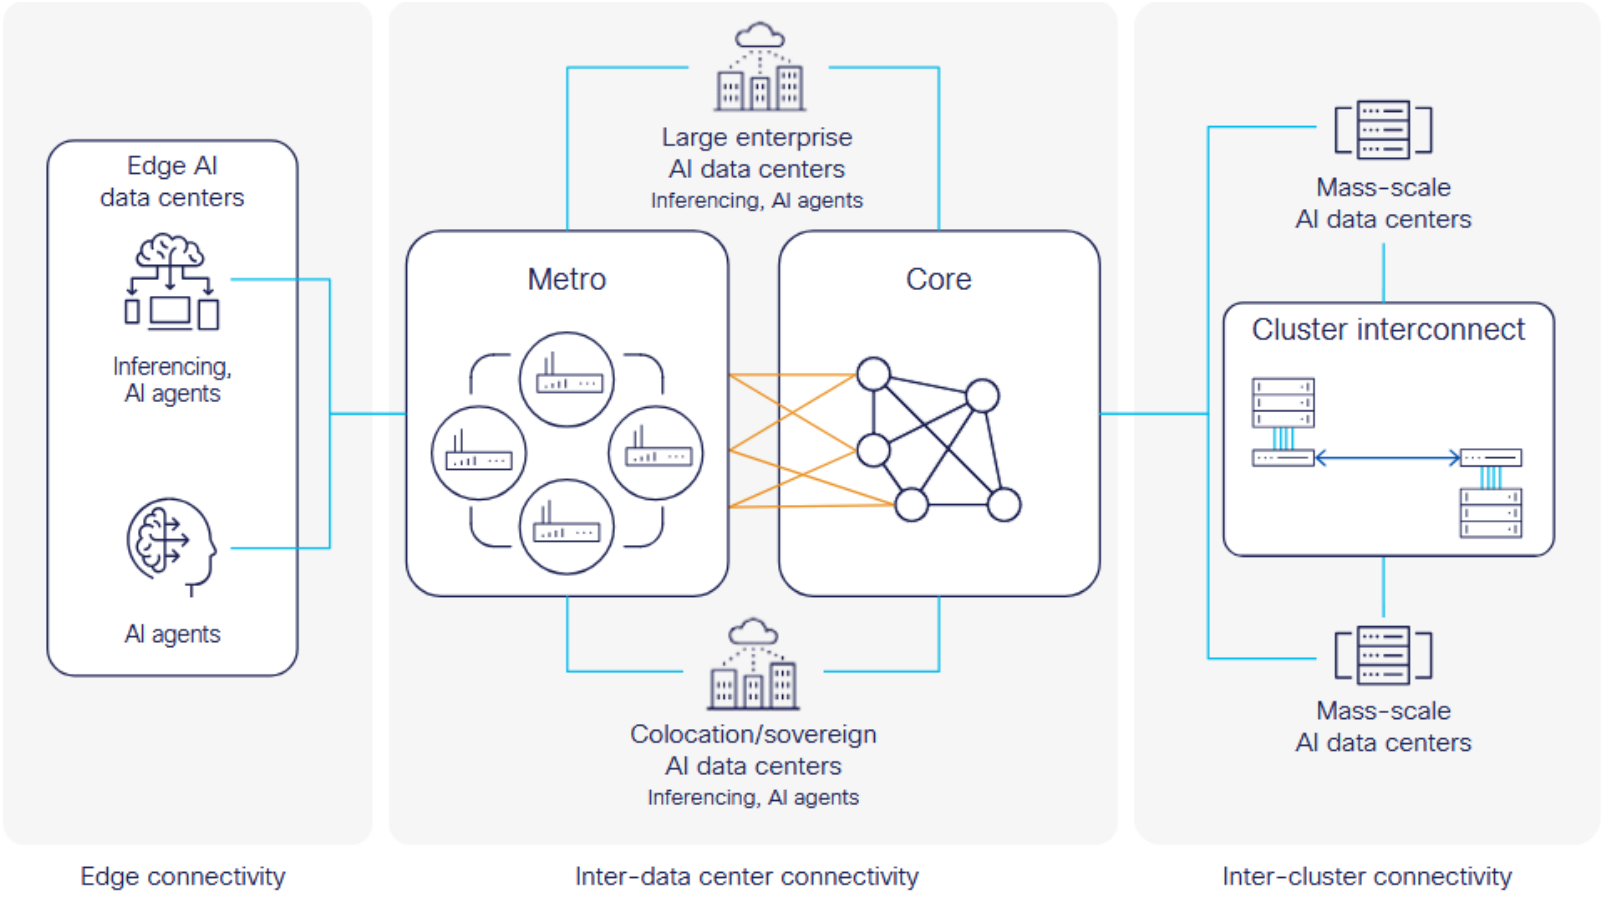

© 2026 Cisco and/or its affiliates. All rights reserved.

What does an infra for agentic AI entail?

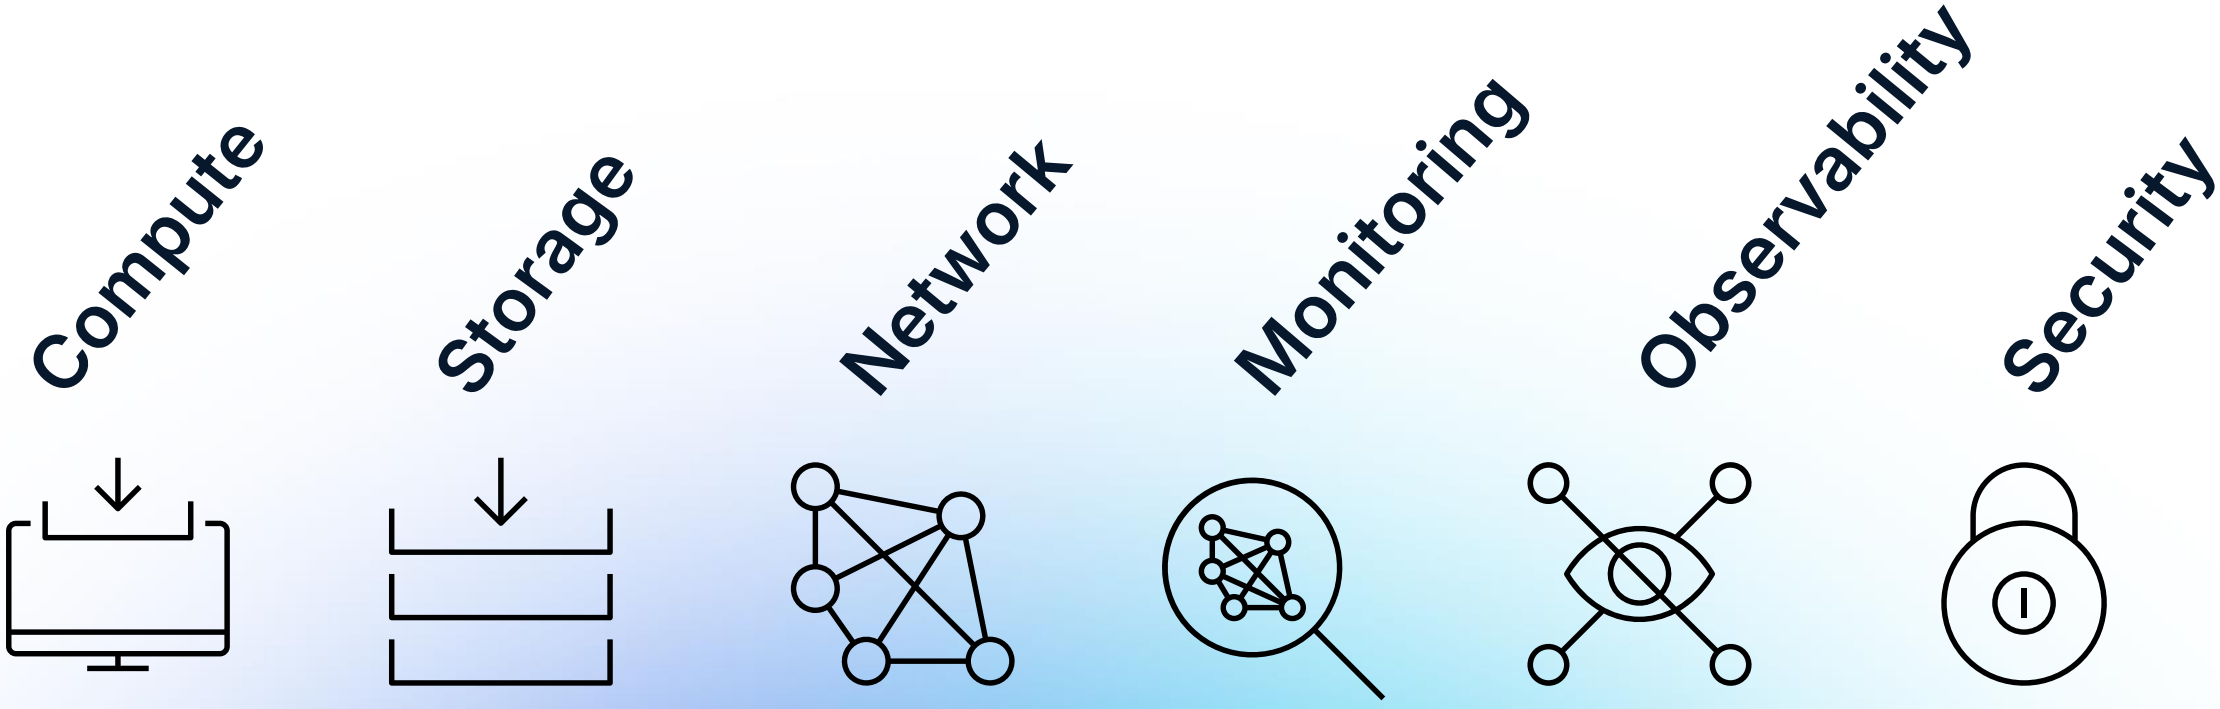

With Agentic AI, AI workloads no longer run only in one centralized cluster (as in training).

Workflows are **distributed and continuous** — AI agents interact dynamically across cloud, enterprise data centers, and edge, exchanging real-time data to make decisions.

CCNA

CCNA

Job ready in the age of AI

Launching February 2027, the new CCNA includes applied, scenario-based testing, enabling learners to build, secure, automate, and troubleshoot real networks from day one.

- Exam topics now available.
- Exam launching February 3, 2026.

The refreshed CCNA certification prepares learners for in-demand IT roles by building the real-world skills employers need—through hands-on, scenario-based learning aligned with modern networking, AI, and automation.

- Shows employers you have real, job-ready IT skills from day one.
- Learn by doing with hands-on, scenario-based training—not just theory.
- Align your certification with real networking roles and career growth.
- Earn a CCNA certification that builds on the industry’s gold standard.

© 2026 Cisco and/or its affiliates. All rights reserved.

What’s new in CCNA

Key highlights

The new CCNA delivers hands-on, scenario-based assessments integrating AI, security, cloud, and automation to build and validate job-ready networking skills from day one.

Exam topics validated by on-the-job experts.

The new CCNA exam topics reflect insights from our Cisco Certified community, Distinguished Engineers, respected IT leaders – and representatives of organizations, companies, and Cisco Customers / Partners that hire CCNA engineers – ensuring new network engineers arrive with a toolkit that meets employer expectations.

Aligning AI and automation.

The new CCNA integrates essential skills in AI, automation,
and security—reflecting the realities of today's hybrid, AI-driven infrastructures. AI isn't an add-on-it's an integral part of the core.

Outcome-driven learning.

The new CCNA ensures learners are prepared to apply knowledge in real-world scenarios, moving beyond memorization to hands-on, systems-level thinking.

Practical skills for real-world value.

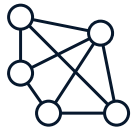

The new CCNA exam features enhanced practical skill and scenario-based testing, ensuring every certified engineer can confidently configure, secure, and troubleshoot in real-time and deliver tangible value from day one.

© 2026 Cisco and/or its affiliates. All rights reserved.

The Next-Generation CCNA Professional

The next-generation CCNA candidate is a versatile network professional who combines traditional networking expertise with modern technology competencies. Here’s what defines them:

Network Infrastructure

Builds and maintains reliable networks across routing, switching, and IP (IPv4/IPv6).

Troubleshooting

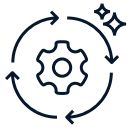

Diagnoses and resolves issues using structured, methodical approaches.

Security Mindset

Applies security best practices including access control and encryption.

AI & Intelligent Ops

Uses AI tools to enhance monitoring, troubleshooting, and decision-making.

Automation & Platforms

Works with Cisco platforms and automation tools like Ansible

Communication

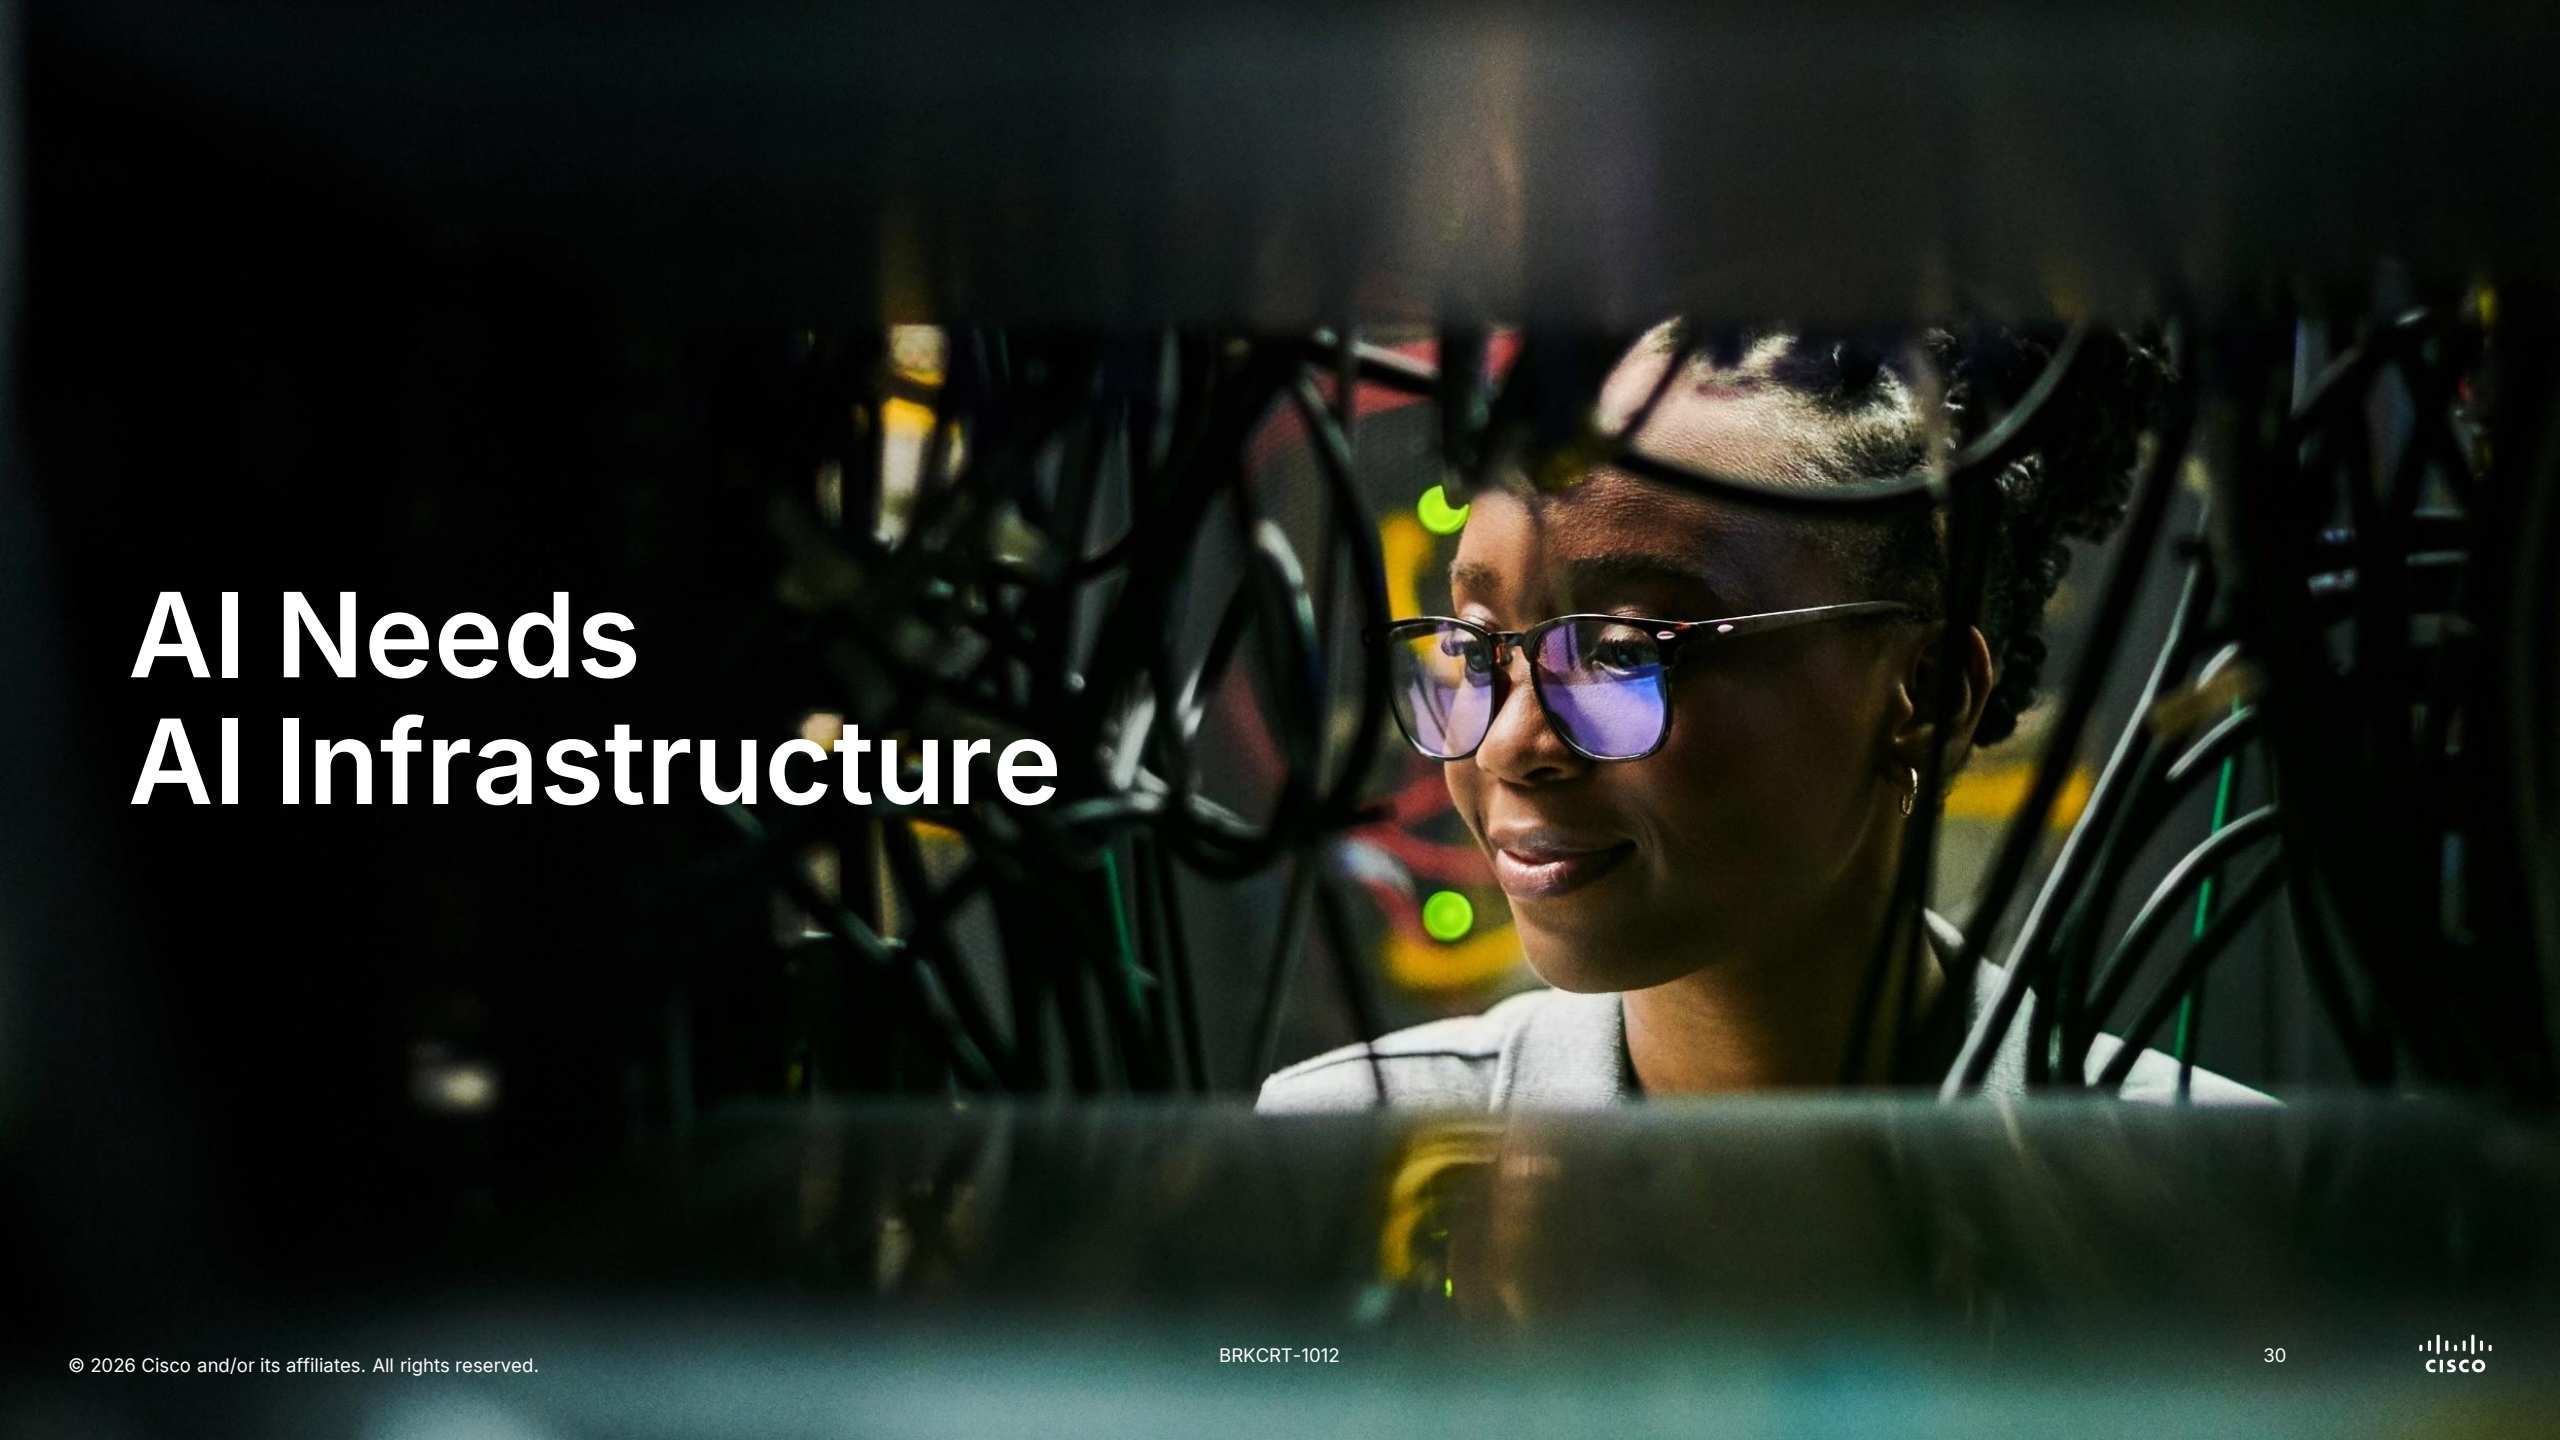

Clearly explains technical concepts and maintains strong documentation.

CCNP

AI Needs AI Infrastructure

© 2026 Cisco and/or its affiliates. All rights reserved.

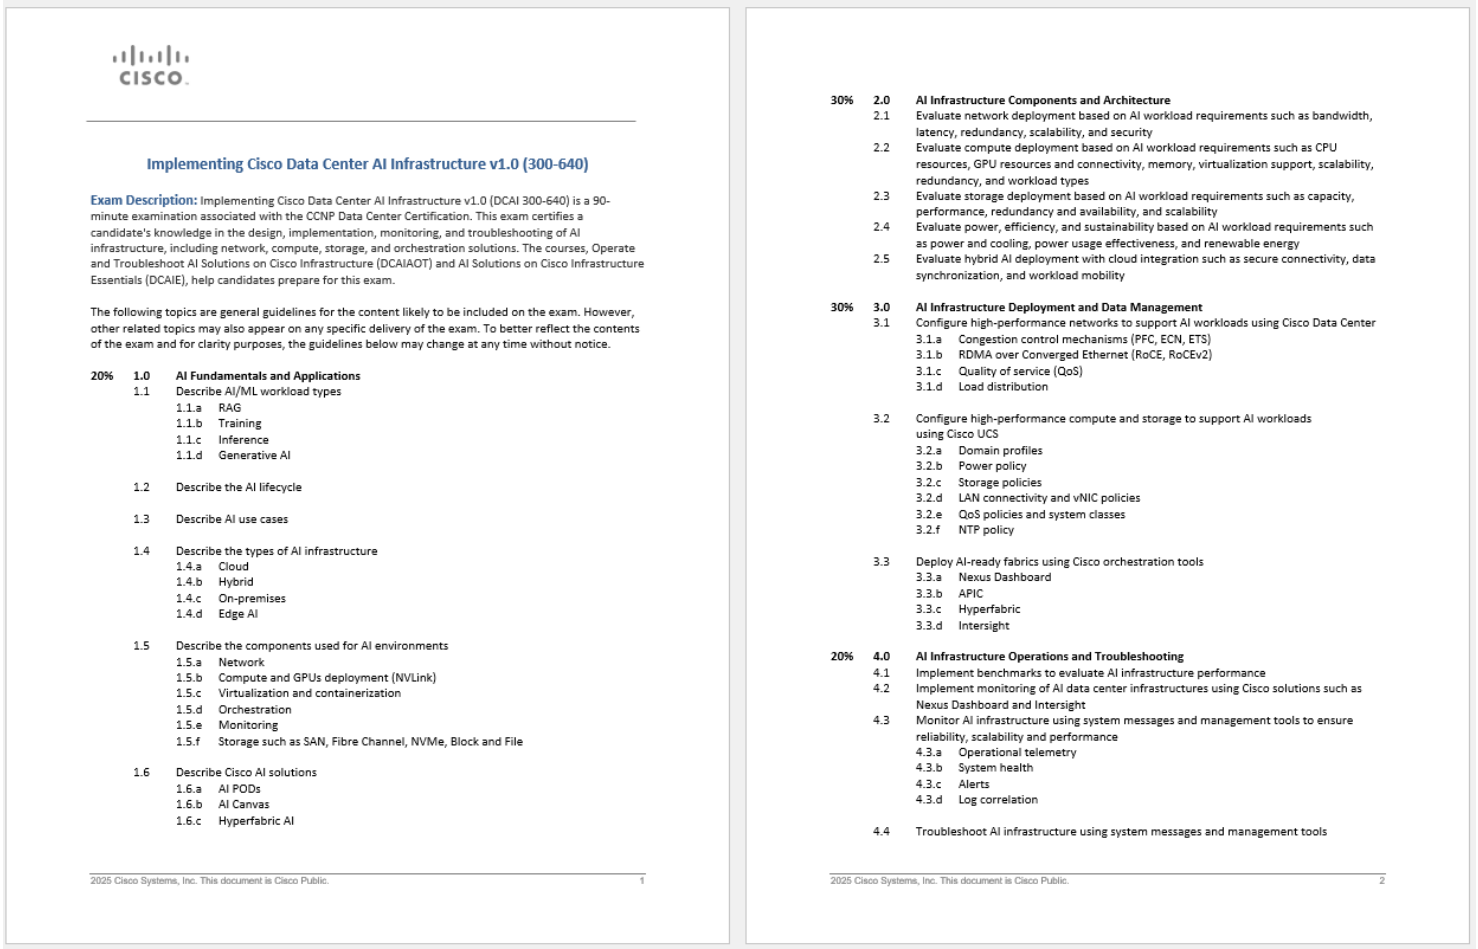

CCNP

Cisco Data Center AI Infrastructure

Exam #300-640 DCAI
Available Feb 9, 2026

Most organizations recognize AI will increase infrastructure workloads. But only 13% of organizations say their networks are fully ready for AI now.

The Cisco Data Center AI Infrastructure Specialist certification (300-640 DCAI) certifies a candidate's comprehensive knowledge of **designing, implementing, operating, and troubleshooting AI solutions across Cisco infrastructure**.

cisco

Implementing Cisco Data Center AI Infrastructure v1.0 (300-640)

Exam Description: Implementing Cisco Data Center AI Infrastructure v1.0 (DCAI 300-640) is a 90-minute examination associated with the CCNP Data Center Certification. This exam certifies a candidate's knowledge in the design, implementation, monitoring, and troubleshooting of AI infrastructure, including network, compute, storage, and orchestration solutions. The courses, Operate and Troubleshoot AI Solutions on Cisco Infrastructure (DCAIAOT) and AI Solutions on Cisco Infrastructure Essentials (DCAIE), help candidates prepare for this exam.

The following topics are general guidelines for the content likely to be included on the exam. However, other related topics may also appear on any specific delivery of the exam. To better reflect the contents of the exam and for clarity purposes, the guidelines below may change at any time without notice.

20% **1.0 AI Fundamentals and Applications**
- 1.1 Describe AI/ML workload types
  - 1.1.a RAG
  - 1.1.b Training
  - 1.1.c Inference
  - 1.1.d Generative AI
- 1.2 Describe the AI lifecycle
- 1.3 Describe AI use cases
- 1.4 Describe the types of AI infrastructure
  - 1.4.a Cloud
  - 1.4.b Hybrid
  - 1.4.c On-premises
  - 1.4.d Edge AI
- 1.5 Describe the components used for AI environments
  - 1.5.a Network
  - 1.5.b Compute and GPUs deployment (NVLink)
  - 1.5.c Virtualization and containerization
  - 1.5.d Orchestration
  - 1.5.e Monitoring
  - 1.5.f Storage such as SAN, Fibre Channel, NVMe, Block and File
- 1.6 Describe Cisco AI solutions
  - 1.6.a AI PODs
  - 1.6.b AI Canvas
  - 1.6.c Hyperfabric AI

2025 Cisco Systems, Inc. This document is Cisco Public. 1

30% **2.0 AI Infrastructure Components and Architecture**
- 2.1 Evaluate network deployment based on AI workload requirements such as bandwidth, latency, redundancy, scalability, and security
- 2.2 Evaluate compute deployment based on AI workload requirements such as CPU resources, GPU resources and connectivity, memory, virtualization support, scalability, redundancy, and workload types
- 2.3 Evaluate storage deployment based on AI workload requirements such as capacity, performance, redundancy and availability, and scalability
- 2.4 Evaluate power, efficiency, and sustainability based on AI workload requirements such as power and cooling, power usage effectiveness, and renewable energy
- 2.5 Evaluate hybrid AI deployment with cloud integration such as secure connectivity, data synchronization, and workload mobility

30% **3.0 AI Infrastructure Deployment and Data Management**
- 3.1 Configure high-performance networks to support AI workloads using Cisco Data Center
  - 3.1.a Congestion control mechanisms (PFC, ECN, ETS)
  - 3.1.b RDMA over Converged Ethernet (RoCE, RoCEv2)
  - 3.1.c Quality of service (QoS)
  - 3.1.d Load distribution
- 3.2 Configure high-performance compute and storage to support AI workloads using Cisco UCS
  - 3.2.a Domain profiles
  - 3.2.b Power policy
  - 3.2.c Storage policies
  - 3.2.d LAN connectivity and vNIC policies
  - 3.2.e QoS policies and system classes
  - 3.2.f NTP policy
- 3.3 Deploy AI-ready fabrics using Cisco orchestration tools
  - 3.3.a Nexus Dashboard
  - 3.3.b APIC
  - 3.3.c Hyperfabric
  - 3.3.d Intersight

20% **4.0 AI Infrastructure Operations and Troubleshooting**
- 4.1 Implement benchmarks to evaluate AI infrastructure performance
- 4.2 Implement monitoring of AI data center infrastructures using Cisco solutions such as Nexus Dashboard and Intersight
- 4.3 Monitor AI infrastructure using system messages and management tools to ensure reliability, scalability and performance
  - 4.3.a Operational telemetry
  - 4.3.b System health
  - 4.3.c Alerts
  - 4.3.d Log correlation
- 4.4 Troubleshoot AI infrastructure using system messages and management tools

cisco

CCIE

CCIE

New AI module coming to the CCIE Lab exam

AI Deploy, Operate, and Optimize (DOO) module
launches in the CCIE Data Center exam at **Cisco Live US 2027**.

- CCIE Data Center (DC) exam topics available Cisco Live Melbourne November 2026.
- CCIE DC practice labs available at Cisco Live London, Feb 2027.
- CCIE DC exam goes live at Cisco Live, US 2027.

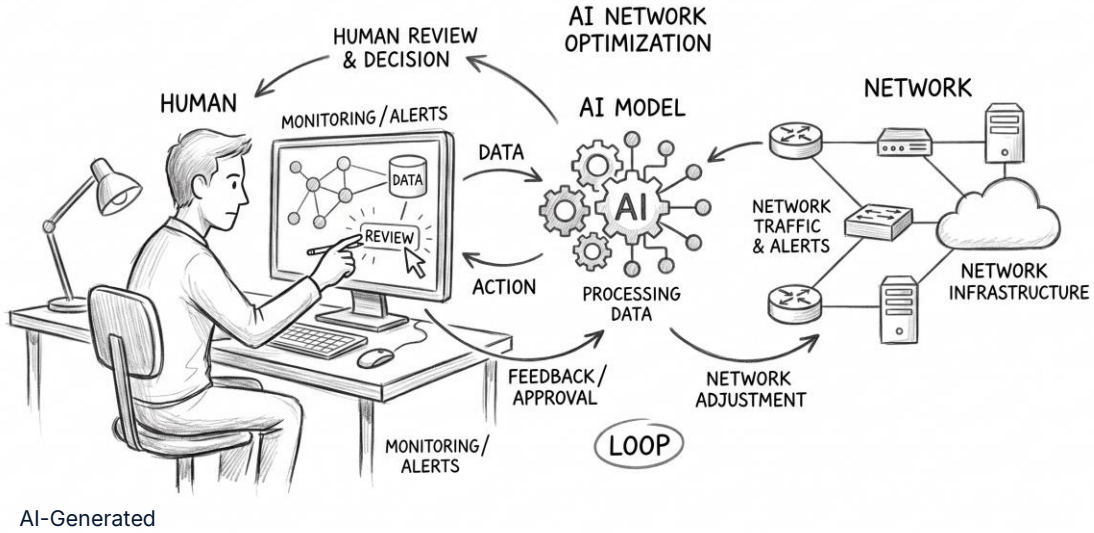

What is this AI Deploy, Operate, and Optimize (DOO) module about**?**

This module introduces AI as a practical toolset within CCIE lab exams.

- Position AI as a practical “force multiplier” to complete complex tasks more efficiently in real-world scenarios.
- Include use cases where AI delivers clear value, making it a pragmatic choice for candidates.
- Keep the focus on engineering outcomes—not AI proficiency.

© 2026 Cisco and/or its affiliates. All rights reserved.

Network engineers “rely” on AI.

AI-Generated

Introduction of AI as a “toolset”

Objective
The introduction of AI as a toolset in our CCIE lab exams using an intelligent way to assist with network configuration, troubleshooting and optimization, without making any compromise on testing strong (human) technical domain expertise, exam integrity and exam relevancy.

Intent
The intent is to position AI as a practical, real-world tool - a "**force multiplier**" - that allows engineers to complete complex, time-consuming tasks more efficiently, applying AI powered tools in real-world scenarios.

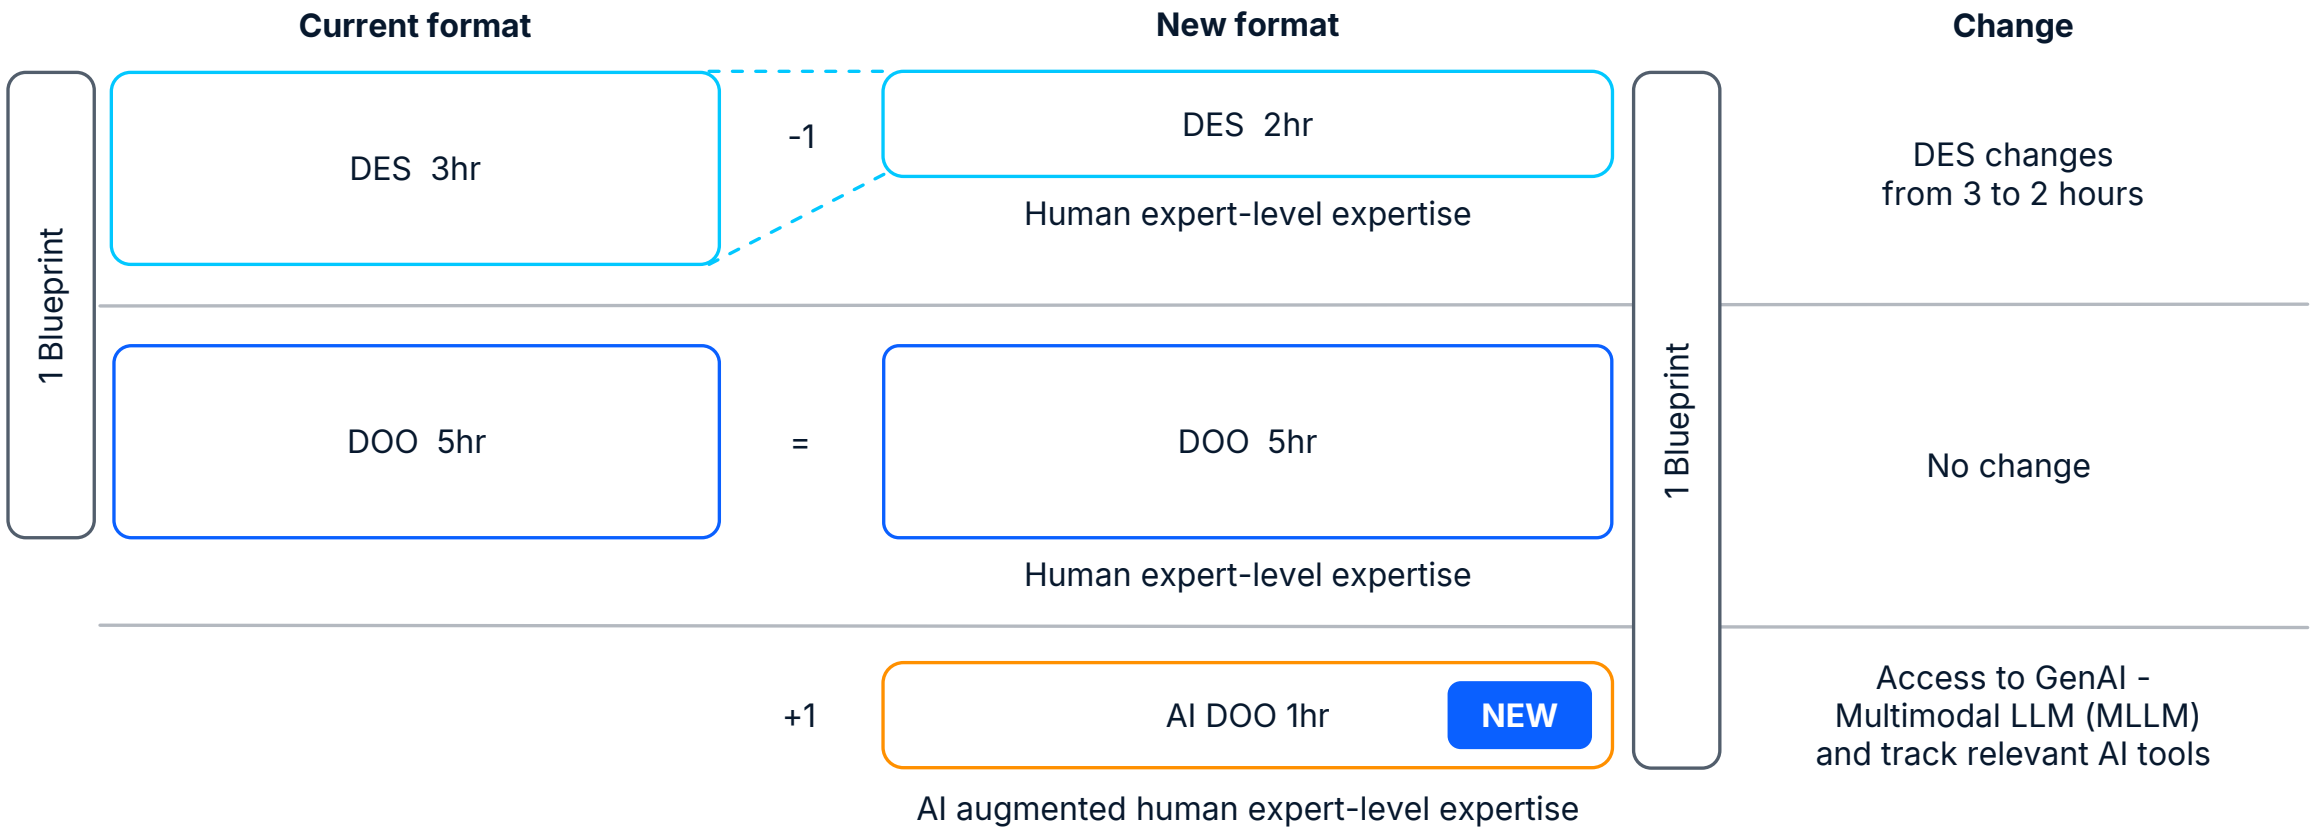

© 2026 Cisco and/or its affiliates. All rights reserved.

CCIE

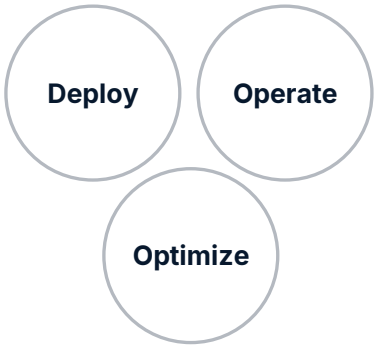

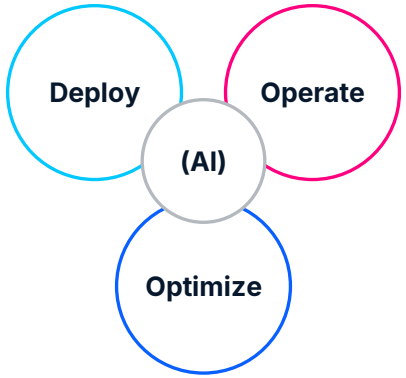

AI Deploy, Operate, and Optimize (DOO) module

Meet our new exam format

© 2026 Cisco and/or its affiliates. All rights reserved.

AI Deploy, Operate, and Optimize (DOO) module

	Module 1 (DES)	Module 2 (DOO)	Module 3 AI Augmented DOO
			
Time	2 hours (fixed)	5 hours (fixed)	1 hours (fixed)
Format	Scenario based	Hands-on + web-based items	Hands-on
Backward Navigation	Disabled	Enabled	Enabled
Point Values	Hidden	Shown	Shown

NEW

© 2026 Cisco and/or its affiliates. All rights reserved.

Role of AI within the AI DOO

AI assisted engineering:
General purpose LLM as a virtual assistant to help with network documentation lookup, configuration, troubleshooting,
AI assisted coding, etc.

AI-Generated

AI Augmented operations:
The use of AI tools for network operations (NetAIOps)

- Cisco Product based solutions. e.g. AI Agent to configure and operationalize Webex AI features or leveraging AI analytics to optimize dial plans and call routing decisions.
- Network interaction. MCP + LLM for NetOps leverages the MCP to give LLMs a standardized, "plug-and-play" interface to the network, using conversational language.
- **Network Ops** leverages the Model Context Protocol to give Large Language Models a standardized, "plug-and-play" interface to live infrastructure and management tools for intent-based, conversational automation

Certification Roadmap

Certification Roadmap

Data Center & Collaboration
Q1: Review/Job Task Analysis
Q2: New blueprints published
Q3: Updated exam go live

Enterprise & Automation
Q2: Review/Job Task Analysis
Q3: New blueprints published
Q4: Updated exam go live

Security & Cybersecurity
Q4: Review/Job Task Analysis
Q1: New blueprints published
Q2: Updated exam go live

CCNA & Service Provider
Q3: Review/Job Task Analysis
Q4: New blueprints published
Q1: Updated exam go live

How it works:

1. Cisco **reviews** each technology on the same quarterly schedule each year to make sure our exams align with the latest Cisco technologies.

2. We **announce** blueprint updates 3-6 months in advance along with updated exam topics and release notes, if applicable.

3. We **publish** the updated exam 3-6 months after the exam blueprint publication, if applicable.

Dates shown reflect Cisco's fiscal year calendar.
Q1: August-October, Q2: November-January, Q3: February-April, Q4: May-July

AI in Cisco Certifications

Certification	Summary	Exam	AI Topic
CCDE	Expert-level certification exam elective for designing AI-ready networks Specialization badges reflecting the elective CCDE certified expert selected during their examination such as the new AI Infrastructure expertise	CCDE AI Infrastructure Elective	• Scalable AI workload design • Secure AI data pipelines • AI for Network Automation
		CCDE Specialist Badges	• AI Infrastructure • Large scale networks • Cloud services • Workforce Mobility
CCIE DC	CCIE Data Center updated to include AI workloads	CCIE Data Center	• Optimizing transport for high performance networks - AI/ML workloads
CCNP DC	New CCNP Data Center exam dedicated to AI Infrastructure Renamed CCNP Data Center Design exam to include AI workloads in title CCNP Data Center Certification exams have been updated to recognize network enabling and monitoring technologies for AI in data center infrastructure	DCID - Designing Cisco Data Center Infrastructure for Traditional and AI workloads	• AI cluster design • Power management for GPU farms • Multi-vendor AI integration
		DCCOR - Implementing and Operating Cisco Data Center Core Technologies	• Infrastructure monitoring using AI-powered tools • Nexus Dashboard • High-performance network enabling technologies for AI in DC Infra
		DCACI - Implementing Cisco Application Centric Infrastructure	• AI assisted monitoring tools
		DCAI – Implementing Cisco Data Center AI Infrastructure	• New exam 100% dedicated to AI Infrastructure topics
CCNP Enterprise	CCNP Enterprise certification exams include AI-related exam topics	ENCOR - Implementing & Operating Enterprise Core Tech	• Cisco Catalyst Center using traditional and AI-powered workflows
		ENSDWI - Implementing Cisco SD-WAN Solutions	• Cisco Catalyst SD-WAN AI-driven Predictive Path Recommendation
		ENWLSD - Designing Cisco Enterprise Wireless Networks	• Cisco Catalyst Center AI-Enhanced RRM
CCNP Security	Major Revision of CCNP Security Core to include AI-related topics Newly launched CCNP Security Specialist Exam	SCOR – Implementing and Operating Cisco Security Core Technologies	• Network visibility and enforcement using native AI/ML • Managing and automating with Splunk • Data loss prevention & AI guardrails - Vulnerabilities in AI/LLM models
		SDSI - Designing Cisco Security Infrastructure	• Role of AI in securing network infrastructure
CCNP Collaboration	Major revision of the CCNP Collaboration with two new exams focused on Cloud and Contact Center to include AI-related exam topics	CLHCT – Implementing Hybrid and Cloud Technologies	• AI features in Cloud Collaboration Solutions
		CLCCE – Implementing Cloud Customer Experience	• Webex AI Agent • AI Assistant
Cybersecurity	CyberOps renamed to Cisco Cybersecurity certifications and have been updated to include AI-related exam topics	CBROPS - Cybersecurity Associate	• Predictive AI
		CBRCOR - Cybersecurity Professional	• AI-powered and AI-driven analysis
CCNA	Update with AI/ML focus	CCNA	• Generative and Predictive AI • ML in network operations
